Project 53 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Pyramid Fitness - Prices</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
Pyramid Fitness price list	The main heading; only one per page.
	Generic block container for grouping and layout.
<table>	Tabular data in rows and columns.
<caption>Classes and prices, 2026</caption>	Title of the table.
<thead>	Group of header rows.
<tr><th scope="col">Class</th><th scope="col">Description</th><th s...	A table row.
<tbody>	Group of data rows.

Line	What it does
<tr><th scope="row">Morning yoga</th><td>Flexibility and calm, 60 m...	Header cell for a row.
<tr><th scope="row">Strength circuit</th><td>Full body, all levels<...	A header cell.
<tr><th scope="row">Spinning</th><td>High energy cycling</td><td cl...	A data cell.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #0f766e;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 50rem;	Limits how wide the element can grow, keeping lines readable.

Declaration	What it does
padding: 0 1rem;	Space inside the element between its border and content.
overflow-x: auto;	Adds a horizontal scrollbar only when needed (responsive tables).
width: 100%;	Fills the container width.
border-collapse: collapse;	Merges adjacent table cell borders into single lines.
border-bottom: 1px solid var(--line);	A bottom border used as a separator line.
background: var(--brand);	Background colour or image.
tbody tr:nth-child(even) {	Every second element: zebra striping.
font-weight: 600;	Thickness of the text.
text-align: right;	Right-aligns inline content, typical for numbers.
font-variant-numeric: tabular-nums;	Makes all digits the same width so columns of numbers line up.
white-space: nowrap;	Prevents text from wrapping to a new line.

Check your work

- Every header cell has scope
- Caption describes the table
- Table scrolls instead of overflowing on a phone
- Numbers right-aligned

Exercises

1. Add a tfoot row with a total.
2. Highlight a row on hover.
3. Make the header row sticky with position: sticky.

Theme data for this project

Field	Value
Business	Pyramid Fitness
Tagline	Train smarter, feel stronger
City	6th of October
Owner	Omar Farouk
Brand colour	#0f766e
Accent colour	#ecfdf5
Offers	Morning yoga (100 EGP); Strength circuit (120 EGP); Spinning (110 EGP); Personal training (350 EGP)

Project 54: Price table for Delta Dental Clinic

Theme: Delta Dental Clinic (Mansoura) | Level 1 | Files: index.html, styles.css

Brief

Present the four main offers in an accessible data table with a caption, column and row headers, zebra stripes and a scroll wrapper for phones.

Learning goals

- Structure a table with caption, thead, tbody, th scope
- Collapse borders and stripe rows
- Keep tables usable on small screens

Elements and CSS used

HTML elements	CSS features
table, caption, thead, tbody, tr, th, td, div	border-collapse, padding, :nth-child(even), text-align, overflow-x, white-space

Build guide

1. Write the table markup with a caption and a thead row of th scope="col".
2. Add one tbody row per offer; the first cell is th scope="row".
3. Wrap the table in .
4. Collapse borders, add padding and a bottom border to cells.
5. Colour the header row and stripe the even rows.
6. Right-align the price column and stop it wrapping.

Project 54: index.html

Project 57: Price table for Green Leaf Cafe

Theme: Green Leaf Cafe (Zamalek) | Level 1 | Files: index.html, styles.css

Brief

Present the four main offers in an accessible data table with a caption, column and row headers, zebra stripes and a scroll wrapper for phones.

Learning goals

- Structure a table with caption, thead, tbody, th scope
- Collapse borders and stripe rows
- Keep tables usable on small screens

Elements and CSS used

HTML elements	CSS features
table, caption, thead, tbody, tr, th, td, div	border-collapse, padding, :nth-child(even), text-align, overflow-x, white-space

Build guide

1. Write the table markup with a caption and a thead row of th scope="col".
2. Add one tbody row per offer; the first cell is th scope="row".
3. Wrap the table in .
4. Collapse borders, add padding and a bottom border to cells.
5. Colour the header row and stripe the even rows.
6. Right-align the price column and stop it wrapping.

Project 57: index.html

```
<!DOCTYPE html>

solid var(--line); }
```

```
thead th { background: var(--brand); color: #fff; }
tbody tr:nth-child(even) { background: var(--accent); }
tbody th { font-weight: 600; }
.num { text-align: right; font-variant-numeric: tabular-nums; white-
space: nowrap; }
```

Project 57 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Green Leaf Cafe - Prices</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
Green Leaf Cafe price list	The main heading; only one per page.
	Generic block container for grouping and layout.
<table>	Tabular data in rows and columns.
<caption>Drinks and prices, 2026</caption>	Title of the table.
<thead>	Group of header rows.
<tr><th scope="col">Drink</th><th scope="col">Description</th><th s...	A table row.
<tbody>	Group of data rows.

Line	What it does
<tr><th scope="row">Flat white</th><td>Double shot, silky milk</td>...	Header cell for a row.
<tr><th scope="row">Cold brew</th><td>18 hours steeped</td><td clas...	A header cell.
<tr><th scope="row">Hibiscus iced tea</th><td>Karkade with mint</td...	A data cell.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #166534;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 50rem;	Limits how wide the element can grow, keeping lines readable.

Declaration	What it does
padding: 0 1rem;	Space inside the element between its border and content.
overflow-x: auto;	Adds a horizontal scrollbar only when needed (responsive tables).
width: 100%;	Fills the container width.
border-collapse: collapse;	Merges adjacent table cell borders into single lines.
border-bottom: 1px solid var(--line);	A bottom border used as a separator line.
background: var(--brand);	Background colour or image.
tbody tr:nth-child(even) {	Every second element: zebra striping.
font-weight: 600;	Thickness of the text.
text-align: right;	Right-aligns inline content, typical for numbers.
font-variant-numeric: tabular-nums;	Makes all digits the same width so columns of numbers line up.
white-space: nowrap;	Prevents text from wrapping to a new line.

Check your work

- Every header cell has scope
- Caption describes the table
- Table scrolls instead of overflowing on a phone
- Numbers right-aligned

Exercises

1. Add a tfoot row with a total.
2. Highlight a row on hover.
3. Make the header row sticky with position: sticky.

Theme data for this project

border-collapse: collapse;	Merges adjacent table cell borders into single lines.
border-bottom: 1px solid var(--line);	A bottom border used as a separator line.
background: var(--brand);	Background colour or image.
tbody tr:nth-child(even) {	Every second element: zebra striping.
font-weight: 600;	Thickness of the text.
text-align: right;	Right-aligns inline content, typical for numbers.
font-variant-numeric: tabular-nums;	Makes all digits the same width so columns of numbers line up.
white-space: nowrap;	Prevents text from wrapping to a new line.

Check your work

- Every header cell has scope
- Caption describes the table
- Table scrolls instead of overflowing on a phone
- Numbers right-aligned

Exercises

1. Add a tfoot row with a total.
2. Highlight a row on hover.
3. Make the header row sticky with position: sticky.

Theme data for this project

Field	Value
Business	Papyrus Stationery
Tagline	Notebooks, pens and paper made in Egypt
City	Heliopolis
Owner	Dina Fathy
Brand colour	#be185d
Accent colour	#fdf2f8
Offers	Dotted notebook (140 EGP); Fountain pen (350 EGP); Washi tape set (90 EGP); Desk planner (110 EGP)

Project 61: Price table for Oasis Plant Nursery

Theme: Oasis Plant Nursery (Sheikh Zayed) | Level 1 | Files: index.html, styles.css

Brief

Present the four main offers in an accessible data table with a caption, column and row headers, zebra stripes and a scroll wrapper for phones.

Learning goals

- Structure a table with caption, thead, tbody, th scope
- Collapse borders and stripe rows
- Keep tables usable on small screens

Elements and CSS used

HTML elements	CSS features
table, caption, thead, tbody, tr, th, td, div	border-collapse, padding, :nth-child(even), text-align, overflow-x, white-space

Build guide

1. Write the table markup with a caption and a thead row of th scope="col".
2. Add one tbody row per offer; the first cell is th scope="row".
3. Wrap the table in .
4. Collapse borders, add padding and a bottom border to cells.
5. Colour the header row and stripe the even rows.

6. Right-align the price column and stop it wrapping.

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Oasis Plant Nursery - Prices</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
Oasis Plant Nursery price list	The main heading; only one per page.
	Generic block container for grouping and layout.
<table>	Tabular data in rows and columns.
<caption>Plants and prices, 2026</caption>	Title of the table.
<thead>	Group of header rows.
<tr><th scope="col">Plant</th><th scope="col">Description</th><th s...	A table row.
<tbody>	Group of data rows.

Line	What it does
<tr><th scope="row">Monstera</th><td>Large leaves, easy care</td><t...	Header cell for a row.
<tr><th scope="row">Snake plant</th><td>Survives anything</td><td c...	A header cell.
<tr><th scope="row">Basil pot</th><td>Kitchen herb</td><td class="n...	A data cell.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #15803d;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 50rem;	Limits how wide the element can grow, keeping lines readable.

Declaration	What it does
padding: 0 1rem;	Space inside the element between its border and content.
overflow-x: auto;	Adds a horizontal scrollbar only when needed (responsive tables).
width: 100%;	Fills the container width.
border-collapse: collapse;	Merges adjacent table cell borders into single lines.
border-bottom: 1px solid var(--line);	A bottom border used as a separator line.
background: var(--brand);	Background colour or image.
tbody tr:nth-child(even) {	Every second element: zebra striping.
font-weight: 600;	Thickness of the text.
text-align: right;	Right-aligns inline content, typical for numbers.
font-variant-numeric: tabular-nums;	Makes all digits the same width so columns of numbers line up.
white-space: nowrap;	Prevents text from wrapping to a new line.

Check your work

:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #c2410c;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 50rem;	Limits how wide the element can grow, keeping lines readable.

Declaration	What it does
padding: 0 1rem;	Space inside the element between its border and content.
overflow-x: auto;	Adds a horizontal scrollbar only when needed (responsive tables).
width: 100%;	Fills the container width.
border-collapse: collapse;	Merges adjacent table cell borders into single lines.
border-bottom: 1px solid var(--line);	A bottom border used as a separator line.
background: var(--brand);	Background colour or image.
tbody tr:nth-child(even) {	Every second element: zebra striping.
font-weight: 600;	Thickness of the text.
text-align: right;	Right-aligns inline content, typical for numbers.
font-variant-numeric: tabular-nums;	Makes all digits the same width so columns of numbers line up.
white-space: nowrap;	Prevents text from wrapping to a new line.

Check your work

- Every header cell has scope
- Caption describes the table
- Table scrolls instead of overflowing on a phone
- Numbers right-aligned

Exercises

1. Add a tfoot row with a total.
2. Highlight a row on hover.
3. Make the header row sticky with position: sticky.

Theme data for this project

Field	Value
Business	Sahara Pet Care
Tagline	Grooming, boarding and vet visits
City	New Cairo
Owner	Rana Ibrahim
Brand colour	#c2410c
Accent colour	#fff7ed
Offers	Full grooming (400 EGP); Day boarding (250 EGP); Vaccination (300 EGP); Dog walking (100 EGP)

Project 65: Price table for Alexandria Sailing School

Theme: Alexandria Sailing School (Alexandria) | Level 1 | Files: index.html, styles.css

Brief

Present the four main offers in an accessible data table with a caption, column and row headers, zebra stripes and a scroll wrapper for phones.

Learning goals

- Structure a table with caption, thead, tbody, th scope
- Collapse borders and stripe rows
- Keep tables usable on small screens

Elements and CSS used

HTML elements	CSS features
table, caption, thead, tbody, tr, th, td, div	border-collapse, padding, :nth-child(even), text-align, overflow-x, white-space

Build guide

1. Write the table markup with a caption and a thead row of th scope="col".
2. Add one tbody row per offer; the first cell is th scope="row".
3. Wrap the table in .
4. Collapse borders, add padding and a bottom border to cells.
5. Colour the header row and stripe the even rows.

6. Right-align the price column and stop it wrapping.

<tbody>	Group of data rows.

Line	What it does
<tr><th scope="row">Haircut and blow-dry</th><td>Consultation inclu...	Header cell for a row.
<tr><th scope="row">Manicure</th><td>Classic or gel</td><td class="...	A header cell.
<tr><th scope="row">Facial</th><td>Deep cleanse, 60 minutes</td><td...	A data cell.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #db2777;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 50rem;	Limits how wide the element can grow, keeping lines readable.

Declaration	What it does
padding: 0 1rem;	Space inside the element between its border and content.
overflow-x: auto;	Adds a horizontal scrollbar only when needed (responsive tables).
width: 100%;	Fills the container width.
border-collapse: collapse;	Merges adjacent table cell borders into single lines.
border-bottom: 1px solid var(--line);	A bottom border used as a separator line.
background: var(--brand);	Background colour or image.
tbody tr:nth-child(even) {	Every second element: zebra striping.
font-weight: 600;	Thickness of the text.
text-align: right;	Right-aligns inline content, typical for numbers.
font-variant-numeric: tabular-nums;	Makes all digits the same width so columns of numbers line up.
white-space: nowrap;	Prevents text from wrapping to a new line.

Check your work

- Every header cell has scope
- Caption describes the table
- Table scrolls instead of overflowing on a phone
- Numbers right-aligned

Exercises

1. Add a tfoot row with a total.
2. Highlight a row on hover.
3. Make the header row sticky with position: sticky.

Theme data for this project

Field	Value
Business	Cleopatra Beauty Salon
Tagline	Hair, nails and skin care
City	Dokki
Owner	Mariam Adel
Brand colour	#db2777
Accent colour	#fdf2f8
Offers	Haircut and blow-dry (350 EGP); Manicure (200 EGP); Facial (600 EGP); Bridal package (4500 EGP)

Project 69: Price table for Suez Auto Service

Theme: Suez Auto Service (Suez) | Level 1 | Files: index.html, styles.css

Brief

Present the four main offers in an accessible data table with a caption, column and row headers, zebra stripes and a scroll wrapper for phones.

Learning goals

- Structure a table with caption, thead, tbody, th scope
- Collapse borders and stripe rows
- Keep tables usable on small screens

Elements and CSS used

HTML elements	CSS features
table, caption, thead, tbody, tr, th, td, div	border-collapse, padding, :nth-child(even), text-align, overflow-x, white-space

Build guide

1. Write the table markup with a caption and a thead row of th scope="col".
2. Add one tbody row per offer; the first cell is th scope="row".
3. Wrap the table in .
4. Collapse borders, add padding and a bottom border to cells.
5. Colour the header row and stripe the even rows.
6. Right-align the price column and stop it wrapping.

Project 72 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Delta Kids Library - Prices</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
Delta Kids Library price list	The main heading; only one per page.
	Generic block container for grouping and layout.
<table>	Tabular data in rows and columns.
<caption>Programmes and prices, 2026</caption>	Title of the table.
<thead>	Group of header rows.
<tr><th scope="col">Programme</th><th scope="col">Description</th><...	A table row.
<tbody>	Group of data rows.

Line	What it does
<tr><th scope="row">Story hour</th><td>Ages 3 to 6, Saturdays</td><...	Header cell for a row.
<tr><th scope="row">Reading club</th><td>Ages 7 to 11</td><td class...	A header cell.
<tr><th scope="row">Homework help</th><td>Weekday afternoons</td><t...	A data cell.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #ea580c;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 50rem;	Limits how wide the element can grow, keeping lines readable.

Declaration	What it does
padding: 0 1rem;	Space inside the element between its border and content.
overflow-x: auto;	Adds a horizontal scrollbar only when needed (responsive tables).
width: 100%;	Fills the container width.
border-collapse: collapse;	Merges adjacent table cell borders into single lines.
border-bottom: 1px solid var(--line);	A bottom border used as a separator line.
background: var(--brand);	Background colour or image.
tbody tr:nth-child(even) {	Every second element: zebra striping.
font-weight: 600;	Thickness of the text.
text-align: right;	Right-aligns inline content, typical for numbers.
font-variant-numeric: tabular-nums;	Makes all digits the same width so columns of numbers line up.
white-space: nowrap;	Prevents text from wrapping to a new line.

Check your work

- Every header cell has scope
- Caption describes the table
- Table scrolls instead of overflowing on a phone
- Numbers right-aligned

Exercises

1. Add a tfoot row with a total.
2. Highlight a row on hover.
3. Make the header row sticky with position: sticky.

Theme data for this project

Field	Value
Business	Delta Kids Library
Tagline	Stories, reading clubs and homework help
City	Tanta
Owner	Ghada Kamel
Brand colour	#ea580c
Accent colour	#fff7ed
Offers	Story hour (Free); Reading club (50 EGP per month); Homework help (Free); Summer challenge (Free)

Project 73: Price table for Nubian Guest House

Theme: Nubian Guest House (Aswan) | Level 1 | Files: index.html, styles.css

Brief

Present the four main offers in an accessible data table with a caption, column and row headers, zebra stripes and a scroll wrapper for phones.

Learning goals

- Structure a table with caption, thead, tbody, th scope
- Collapse borders and stripe rows
- Keep tables usable on small screens

Elements and CSS used

HTML elements	CSS features
table, caption, thead, tbody, tr, th, td, div	border-collapse, padding, :nth-child(even), text-align, overflow-x, white-space

Build guide

1. Write the table markup with a caption and a thead row of th scope="col".
2. Add one tbody row per offer; the first cell is th scope="row".
3. Wrap the table in .
4. Collapse borders, add padding and a bottom border to cells.
5. Colour the header row and stripe the even rows.
6. Right-align the price column and stop it wrapping.

Project type: Contact form

Level 1 | 25 projects, one per theme

Build a contact form with text, email, select and textarea controls, proper labels, built-in validation and a styled submit button.

Project 76: Contact form for Cairo Book Shop

Theme: Cairo Book Shop (Giza) | Level 1 | Files: index.html, styles.css

Brief

Build a contact form with text, email, select and textarea controls, proper labels, built-in validation and a styled submit button.

Learning goals

- Connect every label to its control with for/id
- Use input types and required for free validation
- Style focus and invalid states

Elements and CSS used

HTML elements	CSS features
form, label, input, select, option, textarea, button, address, a	display: grid, gap, font: inherit, :focus-visible, :user-invalid, border-radius

Build guide

1. Create the form with action and method.
2. Add one .row per field: a label followed by its control; match for and id.
3. Use type="email", required and minlength.
4. Add the select with one option per offer.
5. Style with Grid gaps; make controls full width and inherit the page font.
6. Submit the empty form and watch the browser's validation messages.

Project 76 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Cairo Book Shop - Contact</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
Contact Cairo Book Shop	The main heading; only one per page.
<form action="/contact" method="post" class="form">	A form; action is where the data goes, method how it is sent.
	Generic block container for grouping and layout.
<label for="name">Your name</label>	Text label for a control; for matches the control's id, or the label wraps the control.
<input id="name" name="name" type="text" required autocomplete="name">	A form control; its type decides what it looks like.

Line	What it does
<input id="email" name="email" type="email" required autocomplete="...	Email field: validated automatically and shows the @ keyboard on phones.
<select id="topic" name="topic">	Drop-down list.
<option>Learn HTML</option>	One choice in a select or datalist.
<textarea id="msg" name="message" rows="5" required minlength="10">...	Multi-line text field.
<button type="submit">Send message</button>	A clickable button; inside a form it submits by default.
<address>Cairo Book Shop, Giza · <a href="mailto:hello@books...	A hyperlink; href gives the destination.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #b90000;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.

Declaration	What it does
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 36rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
display: grid;	Turns the element into a grid container.
gap: 1rem;	Space between grid or flex items without extra margins.
font-weight: 600;	Thickness of the text.
font: inherit;	Makes form controls use the page font instead of the browser default.
border: 1px solid #bbb;	Changes the visual order of a flex item without changing the source.
border-radius: 8px;	Rounds the corners.
width: 100%;	Fills the container width.
input:focus-visible, select:focus-visible, textarea:focus-visible {	Applies when the element is focused by keyboard; keeps focus rings visible.
border-color: var(--brand);	The line around the element: width, style and colour.
input:user-invalid, textarea:user-invalid {	A field the user has edited that fails validation.
background: var(--brand);	Background colour or image.
border: 0;	Removes the default border (for example on an iframe or button).
border-radius: 999px;	Fully rounded pill shape.

Declaration	What it does
cursor: pointer;	Shows the hand cursor to indicate something clickable.

Check your work

- Clicking a label focuses its control
- Empty submit is blocked
- Focus ring visible
- Address is real contact info, not italic

Exercises

1. Add a checkbox for newsletter consent.
2. Put name and email side by side on wide screens.
3. Add a pattern attribute for an Egyptian phone number.

Theme data for this project

Field	Value
Business	Cairo Book Shop
Tagline	PDF and printed books about web development
City	Giza
Owner	Mohamed Khattab
Brand colour	#b90000
Accent colour	#f4f1ea
Offers	Learn HTML (120 EGP); CSS in Practice (150 EGP); JavaScript Basics (180 EGP); Web Accessibility (95 EGP)

Project 77: Contact form for Nile Bakery

Theme: Nile Bakery (Cairo) | Level 1 | Files: index.html, styles.css

Brief

Build a contact form with text, email, select and textarea controls, proper labels, built-in validation and a styled submit button.

Learning goals

- Connect every label to its control with for/id
- Use input types and required for free validation
- Style focus and invalid states

Elements and CSS used

HTML elements	CSS features
form, label, input, select, option, textarea, button, address, a	display: grid, gap, font: inherit, :focus-visible, :user-invalid, border-radius

Build guide

1. Create the form with action and method.
2. Add one .row per field: a label followed by its control; match for and id.
3. Use type="email", required and minlength.
4. Add the select with one option per offer.
5. Style with Grid gaps; make controls full width and inherit the page font.
6. Submit the empty form and watch the browser's validation messages.

Project 77: index.html

Project 79 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Delta Dental Clinic - Contact</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
Contact Delta Dental Clinic	The main heading; only one per page.
<form action="/contact" method="post" class="form">	A form; action is where the data goes, method how it is sent.
	Generic block container for grouping and layout.
<label for="name">Your name</label>	Text label for a control; for matches the control's id, or the label wraps the control.
<input id="name" name="name" type="text" required autocomplete="name">	A form control; its type decides what it looks like.

Line	What it does
<input id="email" name="email" type="email" required autocomplete="...	Email field: validated automatically and shows the @ keyboard on phones.
<select id="topic" name="topic">	Drop-down list.
<option>Check-up</option>	One choice in a select or datalist.
<textarea id="msg" name="message" rows="5" required minlength="10">...	Multi-line text field.
<button type="submit">Send message</button>	A clickable button; inside a form it submits by default.
<address>Delta Dental Clinic, Mansoura · <a href="mailto:hel...	A hyperlink; href gives the destination.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #1d4ed8;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.

Declaration	What it does
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 36rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
display: grid;	Turns the element into a grid container.
gap: 1rem;	Space between grid or flex items without extra margins.
font-weight: 600;	Thickness of the text.
font: inherit;	Makes form controls use the page font instead of the browser default.
border: 1px solid #bbb;	Changes the visual order of a flex item without changing the source.
border-radius: 8px;	Rounds the corners.
width: 100%;	Fills the container width.
input:focus-visible, select:focus-visible, textarea:focus-visible {	Applies when the element is focused by keyboard; keeps focus rings visible.
border-color: var(--brand);	The line around the element: width, style and colour.
input:user-invalid, textarea:user-invalid {	A field the user has edited that fails validation.
background: var(--brand);	Background colour or image.
border: 0;	Removes the default border (for example on an iframe or button).
border-radius: 999px;	Fully rounded pill shape.

Declaration	What it does
cursor: pointer;	Shows the hand cursor to indicate something clickable.

Check your work

- Clicking a label focuses its control
- Empty submit is blocked
- Focus ring visible
- Address is real contact info, not italic

Exercises

1. Add a checkbox for newsletter consent.
2. Put name and email side by side on wide screens.
3. Add a pattern attribute for an Egyptian phone number.

Theme data for this project

Field	Value
Business	Delta Dental Clinic
Tagline	Gentle care for the whole family
City	Mansoura
Owner	Dr. Hana Youssef
Brand colour	#1d4ed8
Accent colour	#eff6ff
Offers	Check-up (300 EGP); Whitening (1500 EGP); Filling (600 EGP); Braces consultation (Free)

Project 80: Contact form for Red Sea Travel

Theme: Red Sea Travel (Hurghada) | Level 1 | Files: index.html, styles.css

Brief

Build a contact form with text, email, select and textarea controls, proper labels, built-in validation and a styled submit button.

Learning goals

- Connect every label to its control with for/id
- Use input types and required for free validation
- Style focus and invalid states

Elements and CSS used

HTML elements	CSS features
form, label, input, select, option, textarea, button, address, a	display: grid, gap, font: inherit, :focus-visible, :user-invalid, border-radius

Build guide

1. Create the form with action and method.
2. Add one .row per field: a label followed by its control; match for and id.
3. Use type="email", required and minlength.
4. Add the select with one option per offer.
5. Style with Grid gaps; make controls full width and inherit the page font.
6. Submit the empty form and watch the browser's validation messages.

Project 80: index.html

```

font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.

Declaration	What it does
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 36rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
display: grid;	Turns the element into a grid container.
gap: 1rem;	Space between grid or flex items without extra margins.
font-weight: 600;	Thickness of the text.
font: inherit;	Makes form controls use the page font instead of the browser default.
border: 1px solid #bbb;	Changes the visual order of a flex item without changing the source.
border-radius: 8px;	Rounds the corners.
width: 100%;	Fills the container width.
input:focus-visible, select:focus-visible, textarea:focus-visible {	Applies when the element is focused by keyboard; keeps focus rings visible.
border-color: var(--brand);	The line around the element: width, style and colour.
input:user-invalid, textarea:user-invalid {	A field the user has edited that fails validation.
background: var(--brand);	Background colour or image.
border: 0;	Removes the default border (for example on an iframe or button).
border-radius: 999px;	Fully rounded pill shape.

Declaration	What it does
cursor: pointer;	Shows the hand cursor to indicate something clickable.

Check your work

- Clicking a label focuses its control
- Empty submit is blocked
- Focus ring visible
- Address is real contact info, not italic

Exercises

1. Add a checkbox for newsletter consent.
2. Put name and email side by side on wide screens.
3. Add a pattern attribute for an Egyptian phone number.

Theme data for this project

Field	Value
Business	Green Leaf Cafe
Tagline	Specialty coffee and quiet corners
City	Zamalek
Owner	Karim Said
Brand colour	#166534
Accent colour	#f0fdf4
Offers	Flat white (55 EGP); Cold brew (60 EGP); Hibiscus iced tea (40 EGP); Cheesecake (75 EGP)

Project 83: Contact form for Sinai Trekking Club

Theme: Sinai Trekking Club (Saint Catherine) | Level 1 | Files: index.html, styles.css

Brief

Build a contact form with text, email, select and textarea controls, proper labels, built-in validation and a styled submit button.

Learning goals

- Connect every label to its control with for/id
- Use input types and required for free validation
- Style focus and invalid states

Elements and CSS used

HTML elements	CSS features
form, label, input, select, option, textarea, button, address, a	display: grid, gap, font: inherit, :focus-visible, :user-invalid, border-radius

Build guide

1. Create the form with action and method.
2. Add one .row per field: a label followed by its control; match for and id.
3. Use type="email", required and minlength.
4. Add the select with one option per offer.
5. Style with Grid gaps; make controls full width and inherit the page font.

6. Submit the empty form and watch the browser's validation messages.

Project 83 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Sinai Trekking Club - Contact</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
Contact Sinai Trekking Club	The main heading; only one per page.
<form action="/contact" method="post" class="form">	A form; action is where the data goes, method how it is sent.
	Generic block container for grouping and layout.
<label for="name">Your name</label>	Text label for a control; for matches the control's id, or the label wraps the control.
<input id="name" name="name" type="text" required autocomplete="name">	A form control; its type decides what it looks like.

Line	What it does
<input id="email" name="email" type="email" required autocomplete="...	Email field: validated automatically and shows the @ keyboard on phones.
<select id="topic" name="topic">	Drop-down list.
<option>Mount Sinai sunrise</option>	One choice in a select or datalist.
<textarea id="msg" name="message" rows="5" required minlength="10">...	Multi-line text field.
<button type="submit">Send message</button>	A clickable button; inside a form it submits by default.
<address>Sinai Trekking Club, Saint Catherine · <a href="mai...	A hyperlink; href gives the destination.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #92400e;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.

Declaration	What it does
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 36rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
display: grid;	Turns the element into a grid container.
gap: 1rem;	Space between grid or flex items without extra margins.
font-weight: 600;	Thickness of the text.
font: inherit;	Makes form controls use the page font instead of the browser default.
border: 1px solid #bbb;	Changes the visual order of a flex item without changing the source.
border-radius: 8px;	Rounds the corners.
width: 100%;	Fills the container width.
input:focus-visible, select:focus-visible, textarea:focus-visible {	Applies when the element is focused by keyboard; keeps focus rings visible.
border-color: var(--brand);	The line around the element: width, style and colour.
input:user-invalid, textarea:user-invalid {	A field the user has edited that fails validation.
background: var(--brand);	Background colour or image.
border: 0;	Removes the default border (for example on an iframe or button).
border-radius: 999px;	Fully rounded pill shape.

Declaration	What it does
cursor: pointer;	Shows the hand cursor to indicate something clickable.

Check your work

- Clicking a label focuses its control
- Empty submit is blocked

Project 86: Contact form for Oasis Plant Nursery

Theme: Oasis Plant Nursery (Sheikh Zayed) | Level 1 | Files: index.html, styles.css

Brief

Build a contact form with text, email, select and textarea controls, proper labels, built-in validation and a styled submit button.

Learning goals

- Connect every label to its control with for/id
- Use input types and required for free validation
- Style focus and invalid states

Elements and CSS used

HTML elements	CSS features
form, label, input, select, option, textarea, button, address, a	display: grid, gap, font: inherit, :focus-visible, :user-invalid, border-radius

Build guide

1. Create the form with action and method.
2. Add one .row per field: a label followed by its control; match for and id.
3. Use type="email", required and minlength.
4. Add the select with one option per offer.
5. Style with Grid gaps; make controls full width and inherit the page font.

6. Submit the empty form and watch the browser's validation messages.

Project 86 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Oasis Plant Nursery - Contact</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
Contact Oasis Plant Nursery	The main heading; only one per page.
<form action="/contact" method="post" class="form">	A form; action is where the data goes, method how it is sent.
	Generic block container for grouping and layout.
<label for="name">Your name</label>	Text label for a control; for matches the control's id, or the label wraps the control.
<input id="name" name="name" type="text" required autocomplete="name">	A form control; its type decides what it looks like.

Line	What it does
<input id="email" name="email" type="email" required autocomplete="...	Email field: validated automatically and shows the @ keyboard on phones.
<select id="topic" name="topic">	Drop-down list.
<option>Monstera</option>	One choice in a select or datalist.
<textarea id="msg" name="message" rows="5" required minlength="10">...	Multi-line text field.
<button type="submit">Send message</button>	A clickable button; inside a form it submits by default.
<address>Oasis Plant Nursery, Sheikh Zayed · <a href="mailto...	A hyperlink; href gives the destination.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #15803d;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.

Declaration	What it does
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 36rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
display: grid;	Turns the element into a grid container.
gap: 1rem;	Space between grid or flex items without extra margins.
font-weight: 600;	Thickness of the text.
font: inherit;	Makes form controls use the page font instead of the browser default.
border: 1px solid #bbb;	Changes the visual order of a flex item without changing the source.
border-radius: 8px;	Rounds the corners.
width: 100%;	Fills the container width.
input:focus-visible, select:focus-visible, textarea:focus-visible {	Applies when the element is focused by keyboard; keeps focus rings visible.
border-color: var(--brand);	The line around the element: width, style and colour.
input:user-invalid, textarea:user-invalid {	A field the user has edited that fails validation.
background: var(--brand);	Background colour or image.
border: 0;	Removes the default border (for example on an iframe or button).
border-radius: 999px;	Fully rounded pill shape.

Declaration	What it does
cursor: pointer;	Shows the hand cursor to indicate something clickable.

Check your work

- Clicking a label focuses its control
- Empty submit is blocked
- Focus ring visible
- Address is real contact info, not italic

Exercises

1. Add a checkbox for newsletter consent.
2. Put name and email side by side on wide screens.
3. Add a pattern attribute for an Egyptian phone number.

Theme data for this project

Field	Value
Business	Oasis Plant Nursery
Tagline	Indoor plants and gardening advice
City	Sheikh Zayed
Owner	Hossam Ali
Brand colour	#15803d
Accent colour	#f7fee7
Offers	Monstera (250 EGP); Snake plant (120 EGP); Basil pot (45 EGP); Olive tree (600 EGP)

Project 87: Contact form for Cedar Furniture

Theme: Cedar Furniture (Damietta) | Level 1 | Files: index.html, styles.css

Brief

Build a contact form with text, email, select and textarea controls, proper labels, built-in validation and a styled submit button.

Learning goals

- Connect every label to its control with for/id
- Use input types and required for free validation
- Style focus and invalid states

Elements and CSS used

HTML elements	CSS features
form, label, input, select, option, textarea, button, address, a	display: grid, gap, font: inherit, :focus-visible, :user-invalid, border-radius

Build guide

1. Create the form with action and method.
2. Add one .row per field: a label followed by its control; match for and id.
3. Use type="email", required and minlength.
4. Add the select with one option per offer.
5. Style with Grid gaps; make controls full width and inherit the page font.
6. Submit the empty form and watch the browser's validation messages.

Project 89 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Sahara Pet Care - Contact</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
Contact Sahara Pet Care	The main heading; only one per page.
<form action="/contact" method="post" class="form">	A form; action is where the data goes, method how it is sent.
	Generic block container for grouping and layout.
<label for="name">Your name</label>	Text label for a control; for matches the control's id, or the label wraps the control.
<input id="name" name="name" type="text" required autocomplete="name">	A form control; its type decides what it looks like.

Line	What it does
<input id="email" name="email" type="email" required autocomplete="...	Email field: validated automatically and shows the @ keyboard on phones.
<select id="topic" name="topic">	Drop-down list.
<option>Full grooming</option>	One choice in a select or datalist.
<textarea id="msg" name="message" rows="5" required minlength="10">...	Multi-line text field.
<button type="submit">Send message</button>	A clickable button; inside a form it submits by default.
<address>Sahara Pet Care, New Cairo · <a href="mailto:hello@...	A hyperlink; href gives the destination.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #c2410c;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.

Declaration	What it does
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 36rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
display: grid;	Turns the element into a grid container.
gap: 1rem;	Space between grid or flex items without extra margins.
font-weight: 600;	Thickness of the text.
font: inherit;	Makes form controls use the page font instead of the browser default.
border: 1px solid #bbb;	Changes the visual order of a flex item without changing the source.
border-radius: 8px;	Rounds the corners.
width: 100%;	Fills the container width.
input:focus-visible, select:focus-visible, textarea:focus-visible {	Applies when the element is focused by keyboard; keeps focus rings visible.
border-color: var(--brand);	The line around the element: width, style and colour.
input:user-invalid, textarea:user-invalid {	A field the user has edited that fails validation.
background: var(--brand);	Background colour or image.
border: 0;	Removes the default border (for example on an iframe or button).
border-radius: 999px;	Fully rounded pill shape.

Declaration	What it does
cursor: pointer;	Shows the hand cursor to indicate something clickable.

Check your work

- Clicking a label focuses its control
- Empty submit is blocked
- Focus ring visible
- Address is real contact info, not italic

Exercises

1. Add a checkbox for newsletter consent.
2. Put name and email side by side on wide screens.
3. Add a pattern attribute for an Egyptian phone number.

Theme data for this project

Field	Value
Business	Sahara Pet Care
Tagline	Grooming, boarding and vet visits
City	New Cairo
Owner	Rana Ibrahim
Brand colour	#c2410c
Accent colour	#fff7ed
Offers	Full grooming (400 EGP); Day boarding (250 EGP); Vaccination (300 EGP); Dog walking (100 EGP)

Project 90: Contact form for Alexandria Sailing School

Theme: Alexandria Sailing School (Alexandria) | Level 1 | Files: index.html, styles.css

Brief

Build a contact form with text, email, select and textarea controls, proper labels, built-in validation and a styled submit button.

Learning goals

- Connect every label to its control with for/id
- Use input types and required for free validation
- Style focus and invalid states

Elements and CSS used

HTML elements	CSS features
form, label, input, select, option, textarea, button, address, a	display: grid, gap, font: inherit, :focus-visible, :user-invalid, border-radius

Build guide

1. Create the form with action and method.
2. Add one .row per field: a label followed by its control; match for and id.
3. Use type="email", required and minlength.
4. Add the select with one option per offer.
5. Style with Grid gaps; make controls full width and inherit the page font.

6. Submit the empty form and watch the browser's validation messages.

Project 90: index.html

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Fayoum Pottery Studio - Contact</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
Contact Fayoum Pottery Studio	The main heading; only one per page.
<form action="/contact" method="post" class="form">	A form; action is where the data goes, method how it is sent.
	Generic block container for grouping and layout.
<label for="name">Your name</label>	Text label for a control; for matches the control's id, or the label wraps the control.
<input id="name" name="name" type="text" required autocomplete="name">	A form control; its type decides what it looks like.

Line	What it does
<input id="email" name="email" type="email" required autocomplete="...	Email field: validated automatically and shows the @ keyboard on phones.
<select id="topic" name="topic">	Drop-down list.
<option>Intro to the wheel</option>	One choice in a select or datalist.
<textarea id="msg" name="message" rows="5" required minlength="10">...	Multi-line text field.
<button type="submit">Send message</button>	A clickable button; inside a form it submits by default.
<address>Fayoum Pottery Studio, Tunis Village · <a href="mai...	A hyperlink; href gives the destination.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #9a3412;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.

Declaration	What it does
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 36rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
display: grid;	Turns the element into a grid container.
gap: 1rem;	Space between grid or flex items without extra margins.
font-weight: 600;	Thickness of the text.
font: inherit;	Makes form controls use the page font instead of the browser default.
border: 1px solid #bbb;	Changes the visual order of a flex item without changing the source.
border-radius: 8px;	Rounds the corners.
width: 100%;	Fills the container width.
input:focus-visible, select:focus-visible, textarea:focus-visible {	Applies when the element is focused by keyboard; keeps focus rings visible.
border-color: var(--brand);	The line around the element: width, style and colour.
input:user-invalid, textarea:user-invalid {	A field the user has edited that fails validation.
background: var(--brand);	Background colour or image.
border: 0;	Removes the default border (for example on an iframe or button).
border-radius: 999px;	Fully rounded pill shape.

Declaration	What it does
cursor: pointer;	Shows the hand cursor to indicate something clickable.

Check your work

- Clicking a label focuses its control
- Empty submit is blocked
- Focus ring visible
- Address is real contact info, not italic

Exercises

1. Add a checkbox for newsletter consent.
2. Put name and email side by side on wide screens.
3. Add a pattern attribute for an Egyptian phone number.

Theme data for this project

Field	Value
Business	Fayoum Pottery Studio
Tagline	Wheel throwing and glazing classes
City	Tunis Village
Owner	Ahmed Mahmoud
Brand colour	#9a3412
Accent colour	#fff7ed
Offers	Intro to the wheel (450 EGP); Glazing day (300 EGP); Kids clay class (200 EGP); Weekend retreat (2500 EGP)

Project 93: Contact form for Cleopatra Beauty Salon

Theme: Cleopatra Beauty Salon (Dokki) | Level 1 | Files: index.html, styles.css

Brief

Build a contact form with text, email, select and textarea controls, proper labels, built-in validation and a styled submit button.

Learning goals

- Connect every label to its control with for/id
- Use input types and required for free validation
- Style focus and invalid states

Elements and CSS used

HTML elements	CSS features
form, label, input, select, option, textarea, button, address, a	display: grid, gap, font: inherit, :focus-visible, :user-invalid, border-radius

Build guide

1. Create the form with action and method.
2. Add one .row per field: a label followed by its control; match for and id.
3. Use type="email", required and minlength.
4. Add the select with one option per offer.
5. Style with Grid gaps; make controls full width and inherit the page font.

6. Submit the empty form and watch the browser's validation messages.

font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.

Declaration	What it does
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 36rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
display: grid;	Turns the element into a grid container.
gap: 1rem;	Space between grid or flex items without extra margins.
font-weight: 600;	Thickness of the text.
font: inherit;	Makes form controls use the page font instead of the browser default.
border: 1px solid #bbb;	Changes the visual order of a flex item without changing the source.
border-radius: 8px;	Rounds the corners.
width: 100%;	Fills the container width.
input:focus-visible, select:focus-visible, textarea:focus-visible {	Applies when the element is focused by keyboard; keeps focus rings visible.
border-color: var(--brand);	The line around the element: width, style and colour.
input:user-invalid, textarea:user-invalid {	A field the user has edited that fails validation.
background: var(--brand);	Background colour or image.
border: 0;	Removes the default border (for example on an iframe or button).
border-radius: 999px;	Fully rounded pill shape.

Declaration	What it does
cursor: pointer;	Shows the hand cursor to indicate something clickable.

Check your work

- Clicking a label focuses its control
- Empty submit is blocked
- Focus ring visible
- Address is real contact info, not italic

Exercises

1. Add a checkbox for newsletter consent.
2. Put name and email side by side on wide screens.
3. Add a pattern attribute for an Egyptian phone number.

Theme data for this project

Field	Value
Business	Luxor Music Academy
Tagline	Oud, piano, guitar and voice lessons
City	Luxor
Owner	Salma Ragab
Brand colour	#4c1d95
Accent colour	#f5f3ff
Offers	Oud for beginners (1600 EGP); Piano grade 1 (1800 EGP); Guitar chords (1400 EGP); Voice coaching (1500 EGP)

Project 96: Contact form for Port Said Seafood

Theme: Port Said Seafood (Port Said) | Level 1 | Files: index.html, styles.css

Brief

Build a contact form with text, email, select and textarea controls, proper labels, built-in validation and a styled submit button.

Learning goals

- Connect every label to its control with for/id
- Use input types and required for free validation
- Style focus and invalid states

Elements and CSS used

HTML elements	CSS features
form, label, input, select, option, textarea, button, address, a	display: grid, gap, font: inherit, :focus-visible, :user-invalid, border-radius

Build guide

1. Create the form with action and method.
2. Add one .row per field: a label followed by its control; match for and id.
3. Use type="email", required and minlength.
4. Add the select with one option per offer.
5. Style with Grid gaps; make controls full width and inherit the page font.
6. Submit the empty form and watch the browser's validation messages.

Project 96: index.html

Project 96 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Port Said Seafood - Contact</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
Contact Port Said Seafood	The main heading; only one per page.
<form action="/contact" method="post" class="form">	A form; action is where the data goes, method how it is sent.
	Generic block container for grouping and layout.
<label for="name">Your name</label>	Text label for a control; for matches the control's id, or the label wraps the control.
<input id="name" name="name" type="text" required autocomplete="name">	A form control; its type decides what it looks like.

Line	What it does
<input id="email" name="email" type="email" required autocomplete="...	Email field: validated automatically and shows the @ keyboard on phones.
<select id="topic" name="topic">	Drop-down list.
<option>Grilled sea bass</option>	One choice in a select or datalist.
<textarea id="msg" name="message" rows="5" required minlength="10">...	Multi-line text field.
<button type="submit">Send message</button>	A clickable button; inside a form it submits by default.
<address>Port Said Seafood, Port Said · <a href="mailto:hell...	A hyperlink; href gives the destination.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #0e7490;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.

Declaration	What it does
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 36rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
display: grid;	Turns the element into a grid container.
gap: 1rem;	Space between grid or flex items without extra margins.
font-weight: 600;	Thickness of the text.
font: inherit;	Makes form controls use the page font instead of the browser default.
border: 1px solid #bbb;	Changes the visual order of a flex item without changing the source.
border-radius: 8px;	Rounds the corners.
width: 100%;	Fills the container width.
input:focus-visible, select:focus-visible, textarea:focus-visible {	Applies when the element is focused by keyboard; keeps focus rings visible.
border-color: var(--brand);	The line around the element: width, style and colour.
input:user-invalid, textarea:user-invalid {	A field the user has edited that fails validation.
background: var(--brand);	Background colour or image.
border: 0;	Removes the default border (for example on an iframe or button).
border-radius: 999px;	Fully rounded pill shape.

Declaration	What it does

Theme: Ismailia Cycling Store (Ismailia) | Level 1 | Files: index.html, styles.css

Brief

Build a contact form with text, email, select and textarea controls, proper labels, built-in validation and a styled submit button.

Learning goals

- Connect every label to its control with for/id
- Use input types and required for free validation
- Style focus and invalid states

Elements and CSS used

HTML elements	CSS features
form, label, input, select, option, textarea, button, address, a	display: grid, gap, font: inherit, :focus-visible, :user-invalid, border-radius

Build guide

1. Create the form with action and method.
2. Add one .row per field: a label followed by its control; match for and id.
3. Use type="email", required and minlength.
4. Add the select with one option per offer.
5. Style with Grid gaps; make controls full width and inherit the page font.

6. Submit the empty form and watch the browser's validation messages.

Project 99: index.html

```

Project 99 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Ismailia Cycling Store - Contact</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
Contact Ismailia Cycling Store	The main heading; only one per page.
<form action="/contact" method="post" class="form">	A form; action is where the data goes, method how it is sent.
	Generic block container for grouping and layout.
<label for="name">Your name</label>	Text label for a control; for matches the control's id, or the label wraps the control.
<input id="name" name="name" type="text" required autocomplete="name">	A form control; its type decides what it looks like.

Line	What it does
<input id="email" name="email" type="email" required autocomplete="...	Email field: validated automatically and shows the @ keyboard on phones.
<select id="topic" name="topic">	Drop-down list.
<option>City bike</option>	One choice in a select or datalist.
<textarea id="msg" name="message" rows="5" required minlength="10">...	Multi-line text field.
<button type="submit">Send message</button>	A clickable button; inside a form it submits by default.
<address>Ismailia Cycling Store, Ismailia · <a href="mailto:...	A hyperlink; href gives the destination.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #dc2626;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.

Declaration	What it does
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 36rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
display: grid;	Turns the element into a grid container.
gap: 1rem;	Space between grid or flex items without extra margins.
font-weight: 600;	Thickness of the text.
font: inherit;	Makes form controls use the page font instead of the browser default.
border: 1px solid #bbb;	Changes the visual order of a flex item without changing the source.
border-radius: 8px;	Rounds the corners.
width: 100%;	Fills the container width.
input:focus-visible, select:focus-visible, textarea:focus-visible {	Applies when the element is focused by keyboard; keeps focus rings visible.
border-color: var(--brand);	The line around the element: width, style and colour.
input:user-invalid, textarea:user-invalid {	A field the user has edited that fails validation.
background: var(--brand);	Background colour or image.
border: 0;	Removes the default border (for example on an iframe or button).
border-radius: 999px;	Fully rounded pill shape.

Declaration	What it does
cursor: pointer;	Shows the hand cursor to indicate something clickable.

Check your work

- Clicking a label focuses its control
- Empty submit is blocked
- Focus ring visible
- Address is real contact info, not italic

Exercises

1. Add a checkbox for newsletter consent.
2. Put name and email side by side on wide screens.
3. Add a pattern attribute for an Egyptian phone number.

Theme data for this project

Field	Value
Business	Ismailia Cycling Store
Tagline	Bikes, parts and Friday group rides
City	Ismailia
Owner	Bassem Adly
Brand colour	#dc2626
Accent colour	#fef2f2
Offers	City bike (6500 EGP); Mountain bike (11000 EGP); Kids bike (3200 EGP); Tune-up (250 EGP)

Project 100: Contact form for Minya Coding Club

Theme: Minya Coding Club (Minya) | Level 1 | Files: index.html, styles.css

Brief

Build a contact form with text, email, select and textarea controls, proper labels, built-in validation and a styled submit button.

Learning goals

- Connect every label to its control with for/id
- Use input types and required for free validation
- Style focus and invalid states

Elements and CSS used

HTML elements	CSS features
form, label, input, select, option, textarea, button, address, a	display: grid, gap, font: inherit, :focus-visible, :user-invalid, border-radius

Build guide

1. Create the form with action and method.
2. Add one .row per field: a label followed by its control; match for and id.
3. Use type="email", required and minlength.
4. Add the select with one option per offer.
5. Style with Grid gaps; make controls full width and inherit the page font.

Project type: Photo gallery

Level 1 | 25 projects, one per theme

Lay out four captioned photos in a responsive grid using figure and figcaption, with lazy loading and a gentle hover zoom.

Project 101: Photo gallery for Cairo Book Shop

Theme: Cairo Book Shop (Giza) | Level 1 | Files: index.html, styles.css

Brief

Lay out four captioned photos in a responsive grid using figure and figcaption, with lazy loading and a gentle hover zoom.

Learning goals

- Use figure/figcaption for captioned images
- Reserve space with width, height and aspect-ratio
- Crop images consistently with object-fit

Elements and CSS used

HTML elements	CSS features
figure, img, figcaption, div, h1	grid-template-columns, auto-fill, aspect-ratio, object-fit, overflow: hidden, transition, transform

Build guide

1. Create an images folder with four photos (any JPEGs, renamed).
2. Write one <figure> per photo with img and figcaption.
3. Give every img alt text, width, height and loading="lazy".
4. Make .gallery a grid with auto-fill columns.
5. Force a 3:2 shape with aspect-ratio and object-fit: cover.
6. Add the hover zoom with transition and transform.

Project 101: index.html

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1">
  <title>Cairo Book Shop - Gallery</title>
  <link rel="stylesheet" href="styles.css">
</head>
<body>
  <main>
    <h1>Cairo Book Shop gallery</h1>
    <div class="gallery">
      <figure><img src="images/bookshop-1.jpg" alt="Learn HTML"
width="600" height="400" loading="lazy"><figcaption>Learn HTML</
figcaption></figure>
      <figure><img src="images/bookshop-2.jpg" alt="CSS in Practice"
width="600" height="400" loading="lazy"><figcaption>CSS in Practice</
figcaption></figure>
      <figure><img src="images/bookshop-3.jpg" alt="JavaScript
Basics" width="600" height="400"
loading="lazy"><figcaption>JavaScript Basics</figcaption></figure>
      <figure><img src="images/bookshop-4.jpg" alt="Web
Accessibility" width="600" height="400"
loading="lazy"><figcaption>Web Accessibility</figcaption></figure>
    </div>
  </main>
</body>
</html>
```

Project 101: styles.css

```
*, *::before, *::after { box-sizing: border-box; }

#5b6472; --line: #d9d9d9; }
body { margin: 0; font-family: system-ui, Arial, sans-serif; line-
height: 1.6; color: var(--ink); }
main { max-width: 64rem; margin: 2rem auto; padding: 0 1rem; }
.gallery { display: grid; gap: 1rem; grid-template-columns: repeat(
auto-fill, minmax(16rem, 1fr)); }
figure { margin: 0; background: var(--accent); border-radius: 12px;
overflow: hidden; }
img { display: block; width: 100%; height: auto; aspect-ratio: 3 / 2;
object-fit: cover; }
figcaption { padding: .6rem .9rem; font-size: .95rem; }
figure:hover img { transform: scale(1.03); }
img { transition: transform .3s; }
```

Project 101 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Cairo Book Shop - Gallery</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
Cairo Book Shop gallery	The main heading; only one per page.
	Generic block container for grouping and layout.
<figure><img src="images/bookshop-1.jpg" alt="Learn HTML" width="60...	An image; alt describes it, width and height reserve space before it loads.
<figure><img src="images/bookshop-2.jpg" alt="CSS in Practice" widt...	Self-contained media with an optional caption.
<figure><img src="images/bookshop-3.jpg" alt="JavaScript Basics" wi...	Caption for the figure.

Line	What it does
<figure><img src="images/bookshop-4.jpg" alt="Web Accessibility" wi...	Defers loading until the image is near the viewport.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #b90000;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 64rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
display: grid;	Turns the element into a grid container.
gap: 1rem;	Space between grid or flex items without extra margins.

Declaration	What it does
grid-template-columns: repeat(auto-fill, minmax(16rem, 1fr));	Defines the columns of the grid.
background: var(--accent);	Background colour or image.
border-radius: 12px;	Rounds the corners.
overflow: hidden;	Clips content that sticks out, so images follow rounded corners.
display: block;	Element starts on a new line and fills the width (used on links and images).
width: 100%;	Fills the container width.
height: auto;	Keeps the natural height, preserving image proportions.
aspect-ratio: 3 / 2;	Keeps a fixed width-to-height ratio, reserving space before media loads.
object-fit: cover;	Crops an image to fill its box while keeping its proportions.
font-size: .95rem;	Size of the text.
figure:hover img {	Applies while the pointer is over the element.
transform: scale(1.03);	Enlarges or shrinks the element visually.
transition: transform .3s;	Animates property changes smoothly, for example on hover.

Check your work

- All images have meaningful alt
- No layout jump while loading
- Grid reflows on narrow screens
- Zoom does not overflow the card

Exercises

1. Make the first image span two columns with grid-column: span 2.
2. Add a lightbox using <dialog>.
3. Use <picture> to serve WebP.

Theme data for this project

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #a0522d;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 64rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.

Declaration	What it does
display: grid;	Turns the element into a grid container.
gap: 1rem;	Space between grid or flex items without extra margins.
grid-template-columns: repeat(auto-fill, minmax(16rem, 1fr));	Defines the columns of the grid.
background: var(--accent);	Background colour or image.
border-radius: 12px;	Rounds the corners.
overflow: hidden;	Clips content that sticks out, so images follow rounded corners.
display: block;	Element starts on a new line and fills the width (used on links and images).
width: 100%;	Fills the container width.
height: auto;	Keeps the natural height, preserving image proportions.
aspect-ratio: 3 / 2;	Keeps a fixed width-to-height ratio, reserving space before media loads.
object-fit: cover;	Crops an image to fill its box while keeping its proportions.
font-size: .95rem;	Size of the text.
figure:hover img {	Applies while the pointer is over the element.
transform: scale(1.03);	Enlarges or shrinks the element visually.
transition: transform .3s;	Animates property changes smoothly, for example on hover.

Check your work

- All images have meaningful alt
- No layout jump while loading

- Grid reflows on narrow screens
- Zoom does not overflow the card

Exercises

1. Make the first image span two columns with grid-column: span 2.
2. Add a lightbox using <dialog>.
3. Use <picture> to serve WebP.

Theme data for this project

Field	Value
Business	Nile Bakery
Tagline	Fresh bread and pastries every morning
City	Cairo
Owner	Sara Adel
Brand colour	#a0522d
Accent colour	#fff6ec
Offers	Sourdough loaf (60 EGP); Croissant (35 EGP); Date cookies (80 EGP); Baklava box (220 EGP)

Project 103: Photo gallery for Pyramid Fitness

Theme: Pyramid Fitness (6th of October) | Level 1 | Files: index.html, styles.css

Brief

Lay out four captioned photos in a responsive grid using figure and figcaption, with lazy loading and a gentle hover zoom.

Learning goals

- Use figure/figcaption for captioned images
- Reserve space with width, height and aspect-ratio
- Crop images consistently with object-fit

Elements and CSS used

HTML elements	CSS features
figure, img, figcaption, div, h1	grid-template-columns, auto-fill, aspect-ratio, object-fit, overflow: hidden, transition, transform

Build guide

1. Create an images folder with four photos (any JPEGs, renamed).
2. Write one <figure> per photo with img and figcaption.
3. Give every img alt text, width, height and loading="lazy".
4. Make .gallery a grid with auto-fill columns.
5. Force a 3:2 shape with aspect-ratio and object-fit: cover.
6. Add the hover zoom with transition and transform.

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Lotus Language School - Gallery</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
Lotus Language School gallery	The main heading; only one per page.
	Generic block container for grouping and layout.
<figure><img src="images/school-1.jpg" alt="English A1" width="600"...	An image; alt describes it, width and height reserve space before it loads.
<figure><img src="images/school-2.jpg" alt="French B1" width="600" ...	Self-contained media with an optional caption.

Line	What it does
<figure><img src="images/school-3.jpg" alt="German A2" width="600" ...	Caption for the figure.
<figure><img src="images/school-4.jpg" alt="IELTS preparation" widt...	Defers loading until the image is near the viewport.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #7c3aed;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 64rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
display: grid;	Turns the element into a grid container.

Declaration	What it does
gap: 1rem;	Space between grid or flex items without extra margins.
grid-template-columns: repeat(auto-fill, minmax(16rem, 1fr));	Defines the columns of the grid.
background: var(--accent);	Background colour or image.
border-radius: 12px;	Rounds the corners.
overflow: hidden;	Clips content that sticks out, so images follow rounded corners.
display: block;	Element starts on a new line and fills the width (used on links and images).
width: 100%;	Fills the container width.
height: auto;	Keeps the natural height, preserving image proportions.
aspect-ratio: 3 / 2;	Keeps a fixed width-to-height ratio, reserving space before media loads.
object-fit: cover;	Crops an image to fill its box while keeping its proportions.
font-size: .95rem;	Size of the text.
figure:hover img {	Applies while the pointer is over the element.
transform: scale(1.03);	Enlarges or shrinks the element visually.
transition: transform .3s;	Animates property changes smoothly, for example on hover.

Check your work

- All images have meaningful alt
- No layout jump while loading
- Grid reflows on narrow screens

- Zoom does not overflow the card

Exercises

1. Make the first image span two columns with grid-column: span 2.
2. Add a lightbox using <dialog>.
3. Use <picture> to serve WebP.

Theme data for this project

Field	Value
Business	Lotus Language School
Tagline	Learn English, French and German in small groups
City	Alexandria
Owner	Nour El Din
Brand colour	#7c3aed
Accent colour	#f5f3ff
Offers	English A1 (1800 EGP); French B1 (2200 EGP); German A2 (2000 EGP); IELTS preparation (3000 EGP)

Project 107: Photo gallery for Green Leaf Cafe

Theme: Green Leaf Cafe (Zamalek) | Level 1 | Files: index.html, styles.css

Brief

Lay out four captioned photos in a responsive grid using figure and figcaption, with lazy loading and a gentle hover zoom.

Learning goals

- Use figure/figcaption for captioned images
- Reserve space with width, height and aspect-ratio
- Crop images consistently with object-fit

Elements and CSS used

HTML elements	CSS features
figure, img, figcaption, div, h1	grid-template-columns, auto-fill, aspect-ratio, object-fit, overflow: hidden, transition, transform

Build guide

1. Create an images folder with four photos (any JPEGs, renamed).
2. Write one <figure> per photo with img and figcaption.
3. Give every img alt text, width, height and loading="lazy".
4. Make .gallery a grid with auto-fill columns.
5. Force a 3:2 shape with aspect-ratio and object-fit: cover.
6. Add the hover zoom with transition and transform.

Project 107: index.html

```

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Papyrus Stationery - Gallery</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
Papyrus Stationery gallery	The main heading; only one per page.
	Generic block container for grouping and layout.
<figure><img src="images/stationery-1.jpg" alt="Dotted notebook" wi...	An image; alt describes it, width and height reserve space before it loads.
<figure><img src="images/stationery-2.jpg" alt="Fountain pen" width...	Self-contained media with an optional caption.
<figure><img src="images/stationery-3.jpg" alt="Washi tape set" wid...	Caption for the figure.

Line	What it does
<figure><img src="images/stationery-4.jpg" alt="Desk planner" width...	Defers loading until the image is near the viewport.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #be185d;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 64rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
display: grid;	Turns the element into a grid container.
gap: 1rem;	Space between grid or flex items without extra margins.

Declaration	What it does
grid-template-columns: repeat(auto-fill, minmax(16rem, 1fr));	Defines the columns of the grid.
background: var(--accent);	Background colour or image.
border-radius: 12px;	Rounds the corners.
overflow: hidden;	Clips content that sticks out, so images follow rounded corners.
display: block;	Element starts on a new line and fills the width (used on links and images).
width: 100%;	Fills the container width.
height: auto;	Keeps the natural height, preserving image proportions.
aspect-ratio: 3 / 2;	Keeps a fixed width-to-height ratio, reserving space before media loads.
object-fit: cover;	Crops an image to fill its box while keeping its proportions.
font-size: .95rem;	Size of the text.
figure:hover img {	Applies while the pointer is over the element.
transform: scale(1.03);	Enlarges or shrinks the element visually.
transition: transform .3s;	Animates property changes smoothly, for example on hover.

Check your work

- All images have meaningful alt
- No layout jump while loading
- Grid reflows on narrow screens
- Zoom does not overflow the card

Exercises

1. Make the first image span two columns with grid-column: span 2.
2. Add a lightbox using <dialog>.
3. Use <picture> to serve WebP.

Theme data for this project

Field	Value
Business	Papyrus Stationery
Tagline	Notebooks, pens and paper made in Egypt
City	Heliopolis
Owner	Dina Fathy
Brand colour	#be185d
Accent colour	#fdf2f8
Offers	Dotted notebook (140 EGP); Fountain pen (350 EGP); Washi tape set (90 EGP); Desk planner (110 EGP)

Project 111: Photo gallery for Oasis Plant Nursery

Theme: Oasis Plant Nursery (Sheikh Zayed) | Level 1 | Files: index.html, styles.css

Brief

Lay out four captioned photos in a responsive grid using figure and figcaption, with lazy loading and a gentle hover zoom.

Learning goals

- Use figure/figcaption for captioned images
- Reserve space with width, height and aspect-ratio
- Crop images consistently with object-fit

Elements and CSS used

HTML elements	CSS features
figure, img, figcaption, div, h1	grid-template-columns, auto-fill, aspect-ratio, object-fit, overflow: hidden, transition, transform

Build guide

1. Create an images folder with four photos (any JPEGs, renamed).
2. Write one <figure> per photo with img and figcaption.
3. Give every img alt text, width, height and loading="lazy".
4. Make .gallery a grid with auto-fill columns.
5. Force a 3:2 shape with aspect-ratio and object-fit: cover.
6. Add the hover zoom with transition and transform.

Project 111: index.html

Theme: Sahara Pet Care (New Cairo) | Level 1 | Files: index.html, styles.css

Brief

Lay out four captioned photos in a responsive grid using figure and figcaption, with lazy loading and a gentle hover zoom.

Learning goals

- Use figure/figcaption for captioned images
- Reserve space with width, height and aspect-ratio
- Crop images consistently with object-fit

Elements and CSS used

HTML elements	CSS features
figure, img, figcaption, div, h1	grid-template-columns, auto-fill, aspect-ratio, object-fit, overflow: hidden, transition, transform

Build guide

1. Create an images folder with four photos (any JPEGs, renamed).
2. Write one <figure> per photo with img and figcaption.
3. Give every img alt text, width, height and loading="lazy".
4. Make .gallery a grid with auto-fill columns.
5. Force a 3:2 shape with aspect-ratio and object-fit: cover.
6. Add the hover zoom with transition and transform.

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Sahara Pet Care - Gallery</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
Sahara Pet Care gallery	The main heading; only one per page.
	Generic block container for grouping and layout.
<figure><img src="images/pets-1.jpg" alt="Full grooming" width="600...	An image; alt describes it, width and height reserve space before it loads.
<figure><img src="images/pets-2.jpg" alt="Day boarding" width="600"...	Self-contained media with an optional caption.

Line	What it does
<figure><img src="images/pets-3.jpg" alt="Vaccination" width="600" ...	Caption for the figure.
<figure><img src="images/pets-4.jpg" alt="Dog walking" width="600" ...	Defers loading until the image is near the viewport.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #c2410c;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 64rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.

Declaration	What it does
display: grid;	Turns the element into a grid container.
gap: 1rem;	Space between grid or flex items without extra margins.
grid-template-columns: repeat(auto-fill, minmax(16rem, 1fr));	Defines the columns of the grid.
background: var(--accent);	Background colour or image.
border-radius: 12px;	Rounds the corners.
overflow: hidden;	Clips content that sticks out, so images follow rounded corners.
display: block;	Element starts on a new line and fills the width (used on links and images).
width: 100%;	Fills the container width.
height: auto;	Keeps the natural height, preserving image proportions.
aspect-ratio: 3 / 2;	Keeps a fixed width-to-height ratio, reserving space before media loads.
object-fit: cover;	Crops an image to fill its box while keeping its proportions.
font-size: .95rem;	Size of the text.
figure:hover img {	Applies while the pointer is over the element.
transform: scale(1.03);	Enlarges or shrinks the element visually.
transition: transform .3s;	Animates property changes smoothly, for example on hover.

Check your work

- All images have meaningful alt
- No layout jump while loading

- Grid reflows on narrow screens
- Zoom does not overflow the card

Exercises

1. Make the first image span two columns with grid-column: span 2.
2. Add a lightbox using <dialog>.
3. Use <picture> to serve WebP.

Theme data for this project

height: auto;	Keeps the natural height, preserving image proportions.
aspect-ratio: 3 / 2;	Keeps a fixed width-to-height ratio, reserving space before media loads.
object-fit: cover;	Crops an image to fill its box while keeping its proportions.
font-size: .95rem;	Size of the text.
figure:hover img {	Applies while the pointer is over the element.
transform: scale(1.03);	Enlarges or shrinks the element visually.
transition: transform .3s;	Animates property changes smoothly, for example on hover.

Check your work

- All images have meaningful alt
- No layout jump while loading
- Grid reflows on narrow screens
- Zoom does not overflow the card

Exercises

1. Make the first image span two columns with grid-column: span 2.
2. Add a lightbox using <dialog>.
3. Use <picture> to serve WebP.

Theme data for this project

Field	Value
Business	Fayoum Pottery Studio
Tagline	Wheel throwing and glazing classes
City	Tunis Village
Owner	Ahmed Mahmoud
Brand colour	#9a3412
Accent colour	#fff7ed
Offers	Intro to the wheel (450 EGP); Glazing day (300 EGP); Kids clay class (200 EGP); Weekend retreat (2500 EGP)

Project 118: Photo gallery for Cleopatra Beauty Salon

Theme: Cleopatra Beauty Salon (Dokki) | Level 1 | Files: index.html, styles.css

Brief

Lay out four captioned photos in a responsive grid using figure and figcaption, with lazy loading and a gentle hover zoom.

Learning goals

- Use figure/figcaption for captioned images
- Reserve space with width, height and aspect-ratio
- Crop images consistently with object-fit

Elements and CSS used

HTML elements	CSS features
figure, img, figcaption, div, h1	grid-template-columns, auto-fill, aspect-ratio, object-fit, overflow: hidden, transition, transform

Build guide

1. Create an images folder with four photos (any JPEGs, renamed).
2. Write one <figure> per photo with img and figcaption.
3. Give every img alt text, width, height and loading="lazy".
4. Make .gallery a grid with auto-fill columns.
5. Force a 3:2 shape with aspect-ratio and object-fit: cover.
6. Add the hover zoom with transition and transform.

Project 118: index.html

<main>	The unique content of this page; exactly one per page.
Cleopatra Beauty Salon gallery	The main heading; only one per page.
	Generic block container for grouping and layout.
<figure><img src="images/salon-1.jpg" alt="Haircut and blow-dry" wi...	An image; alt describes it, width and height reserve space before it loads.
<figure><img src="images/salon-2.jpg" alt="Manicure" width="600" he...	Self-contained media with an optional caption.

Line	What it does
<figure><img src="images/salon-3.jpg" alt="Facial" width="600" heig...	Caption for the figure.
<figure><img src="images/salon-4.jpg" alt="Bridal package" width="6...	Defers loading until the image is near the viewport.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #db2777;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 64rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.

Declaration	What it does
display: grid;	Turns the element into a grid container.
gap: 1rem;	Space between grid or flex items without extra margins.
grid-template-columns: repeat(auto-fill, minmax(16rem, 1fr));	Defines the columns of the grid.
background: var(--accent);	Background colour or image.
border-radius: 12px;	Rounds the corners.
overflow: hidden;	Clips content that sticks out, so images follow rounded corners.
display: block;	Element starts on a new line and fills the width (used on links and images).
width: 100%;	Fills the container width.
height: auto;	Keeps the natural height, preserving image proportions.
aspect-ratio: 3 / 2;	Keeps a fixed width-to-height ratio, reserving space before media loads.
object-fit: cover;	Crops an image to fill its box while keeping its proportions.
font-size: .95rem;	Size of the text.
figure:hover img {	Applies while the pointer is over the element.
transform: scale(1.03);	Enlarges or shrinks the element visually.
transition: transform .3s;	Animates property changes smoothly, for example on hover.

box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #0e7490;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 64rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
display: grid;	Turns the element into a grid container.
gap: 1rem;	Space between grid or flex items without extra margins.

Declaration	What it does
grid-template-columns: repeat(auto-fill, minmax(16rem, 1fr));	Defines the columns of the grid.
background: var(--accent);	Background colour or image.
border-radius: 12px;	Rounds the corners.
overflow: hidden;	Clips content that sticks out, so images follow rounded corners.
display: block;	Element starts on a new line and fills the width (used on links and images).
width: 100%;	Fills the container width.
height: auto;	Keeps the natural height, preserving image proportions.
aspect-ratio: 3 / 2;	Keeps a fixed width-to-height ratio, reserving space before media loads.
object-fit: cover;	Crops an image to fill its box while keeping its proportions.
font-size: .95rem;	Size of the text.
figure:hover img {	Applies while the pointer is over the element.
transform: scale(1.03);	Enlarges or shrinks the element visually.
transition: transform .3s;	Animates property changes smoothly, for example on hover.

Check your work

- All images have meaningful alt
- No layout jump while loading
- Grid reflows on narrow screens
- Zoom does not overflow the card

Exercises

1. Make the first image span two columns with grid-column: span 2.
2. Add a lightbox using <dialog>.
3. Use <picture> to serve WebP.

Theme data for this project

Field	Value
Business	Port Said Seafood
Tagline	Grilled fish straight from the boats
City	Port Said
Owner	Sherif Wahba
Brand colour	#0e7490
Accent colour	#ecfeff
Offers	Grilled sea bass (320 EGP); Shrimp tagine (280 EGP); Calamari (190 EGP); Fish soup (120 EGP)

Project 122: Photo gallery for Delta Kids Library

Theme: Delta Kids Library (Tanta) | Level 1 | Files: index.html, styles.css

Brief

Lay out four captioned photos in a responsive grid using figure and figcaption, with lazy loading and a gentle hover zoom.

Learning goals

- Use figure/figcaption for captioned images
- Reserve space with width, height and aspect-ratio
- Crop images consistently with object-fit

Elements and CSS used

HTML elements	CSS features
figure, img, figcaption, div, h1	grid-template-columns, auto-fill, aspect-ratio, object-fit, overflow: hidden, transition, transform

Build guide

1. Create an images folder with four photos (any JPEGs, renamed).
2. Write one <figure> per photo with img and figcaption.
3. Give every img alt text, width, height and loading="lazy".
4. Make .gallery a grid with auto-fill columns.
5. Force a 3:2 shape with aspect-ratio and object-fit: cover.
6. Add the hover zoom with transition and transform.

Project 122: index.html

<title>Minya Coding Club - Gallery</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
Minya Coding Club gallery	The main heading; only one per page.
	Generic block container for grouping and layout.
<figure><img src="images/coding-1.jpg" alt="HTML weekend" width="60...	An image; alt describes it, width and height reserve space before it loads.
<figure><img src="images/coding-2.jpg" alt="CSS art" width="600" he...	Self-contained media with an optional caption.

Line	What it does
<figure><img src="images/coding-3.jpg" alt="Scratch games" width="6...	Caption for the figure.
<figure><img src="images/coding-4.jpg" alt="Hackathon" width="600" ...	Defers loading until the image is near the viewport.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #2563eb;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 64rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.

Declaration	What it does
display: grid;	Turns the element into a grid container.
gap: 1rem;	Space between grid or flex items without extra margins.
grid-template-columns: repeat(auto-fill, minmax(16rem, 1fr));	Defines the columns of the grid.
background: var(--accent);	Background colour or image.
border-radius: 12px;	Rounds the corners.
overflow: hidden;	Clips content that sticks out, so images follow rounded corners.
display: block;	Element starts on a new line and fills the width (used on links and images).
width: 100%;	Fills the container width.
height: auto;	Keeps the natural height, preserving image proportions.
aspect-ratio: 3 / 2;	Keeps a fixed width-to-height ratio, reserving space before media loads.
object-fit: cover;	Crops an image to fill its box while keeping its proportions.
font-size: .95rem;	Size of the text.
figure:hover img {	Applies while the pointer is over the element.
transform: scale(1.03);	Enlarges or shrinks the element visually.
transition: transform .3s;	Animates property changes smoothly, for example on hover.

Check your work

- All images have meaningful alt
- No layout jump while loading

- Grid reflows on narrow screens
- Zoom does not overflow the card

Exercises

1. Make the first image span two columns with grid-column: span 2.
2. Add a lightbox using <dialog>.
3. Use <picture> to serve WebP.

Theme data for this project

Field	Value
Business	Minya Coding Club
Tagline	Free weekend coding for teenagers
City	Minya
Owner	Youssef Hany
Brand colour	#2563eb
Accent colour	#eff6ff
Offers	HTML weekend (Free); CSS art (Free); Scratch games (Free); Hackathon (Free)

Project type: About page

Level 1 | 25 projects, one per theme

Write a readable long-form page: lead paragraph, image, headings, a value list with strong keywords and a quotation with attribution.

Project 126: About page for Cairo Book Shop

Theme: Cairo Book Shop (Giza) | Level 1 | Files: index.html, styles.css

Brief

Write a readable long-form page: lead paragraph, image, headings, a value list with strong keywords and a quotation with attribution.

Learning goals

- Choose text elements by meaning (strong, cite, blockquote)
- Set comfortable reading width and line length
- Mix a serif body with sans-serif headings

Elements and CSS used

HTML elements	CSS features
article, h1, h2, p, img, ul, li, strong, blockquote, footer, cite	max-width, font-family, font-size, border-left, font-style

Build guide

1. Write the article content first, without any CSS.
2. Add the image with alt text and dimensions.
3. Mark values with at the start of each list item.
4. Add the quotation with <blockquote>, a <footer> and <cite>.
5. Limit the width to 42rem and set fonts.
6. Style the blockquote with a coloured left border.

Project 126: index.html

Our story	Second-level heading for a section.
<p>Delta Dental Clinic was founded by Dr. Hana Youssef</str...	Strong importance (bold by default).

Line	What it does
	Unordered (bulleted) list.
Quality. Every service is checked twice.	One list item.
<blockquote>	A long quotation from another source.
<footer>— <cite>Dr. Hana Youssef</cite></footer>	Footer of the page or of a section.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #1d4ed8;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 42rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.

Declaration	What it does
font-size: 1.1rem;	Size of the text.
max-width: 100%;	Fills the container width.
height: auto;	Keeps the natural height, preserving image proportions.
border-radius: 12px;	Rounds the corners.
border-left: 5px solid var(--brand);	A thick left border used as an accent stripe.
background: var(--accent);	Background colour or image.

Check your work

- Heading order h1 then h2
- Body line length under 75 characters
- Image responsive
- Quote source in cite

Exercises

1. Add a <details> element with 'Opening hours'.
2. Add a timeline as an ordered list.
3. Add a second column with an <aside> on wide screens.

Theme data for this project

Field	Value
Business	Delta Dental Clinic
Tagline	Gentle care for the whole family
City	Mansoura
Owner	Dr. Hana Youssef
Brand colour	#1d4ed8
Accent colour	#eff6ff

Field	Value
Offers	Check-up (300 EGP); Whitening (1500 EGP); Filling (600 EGP); Braces consultation (Free)

Project 130: About page for Red Sea Travel

Theme: Red Sea Travel (Hurghada) | Level 1 | Files: index.html, styles.css

Brief

Write a readable long-form page: lead paragraph, image, headings, a value list with strong keywords and a quotation with attribution.

Learning goals

- Choose text elements by meaning (strong, cite, blockquote)
- Set comfortable reading width and line length
- Mix a serif body with sans-serif headings

Elements and CSS used

HTML elements	CSS features
article, h1, h2, p, img, ul, li, strong, blockquote, footer, cite	max-width, font-family, font-size, border-left, font-style

Build guide

1. Write the article content first, without any CSS.
2. Add the image with alt text and dimensions.
3. Mark values with at the start of each list item.
4. Add the quotation with <blockquote>, a <footer> and <cite>.
5. Limit the width to 42rem and set fonts.
6. Style the blockquote with a coloured left border.

Project 130: index.html

```
<!DOCTYPE html>

Project 133 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>About Sinai Trekking Club</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main class="about">	The unique content of this page; exactly one per page.
<article>	A self-contained piece: card, post, product.
About Sinai Trekking Club	The main heading; only one per page.
<p class="lead">Guided mountain walks for every level, in the heart...	A paragraph of text.
<img src="images/team.jpg" alt="Yara Hamdy in front of Sinai Trekki...	An image; alt describes it, width and height reserve space before it loads.
Our story	Second-level heading for a section.
<p>Sinai Trekking Club was founded by Yara Hamdy w...	Strong importance (bold by default).

Line	What it does
	Unordered (bulleted) list.
Quality. Every hike is checked twice.	One list item.
<blockquote>	A long quotation from another source.
<footer>— <cite>Yara Hamdy</cite></footer>	Footer of the page or of a section.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #92400e;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 42rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.

Declaration	What it does
font-size: 1.1rem;	Size of the text.
max-width: 100%;	Fills the container width.
height: auto;	Keeps the natural height, preserving image proportions.
border-radius: 12px;	Rounds the corners.
border-left: 5px solid var(--brand);	A thick left border used as an accent stripe.
background: var(--accent);	Background colour or image.

Check your work

- Heading order h1 then h2
- Body line length under 75 characters
- Image responsive
- Quote source in cite

Exercises

1. Add a <details> element with 'Opening hours'.
2. Add a timeline as an ordered list.
3. Add a second column with an <aside> on wide screens.

Theme data for this project

Field	Value
Business	Sinai Trekking Club
Tagline	Guided mountain walks for every level
City	Saint Catherine
Owner	Yara Hamdy
Brand colour	#92400e
Accent colour	#fffbeb

Field	Value
Offers	Mount Sinai sunrise (400 EGP); Blue Desert loop (250 EGP); Wadi Gnai (300 EGP); Three-day traverse (1900 EGP)

Project 134: About page for Horizon Photography

Theme: Horizon Photography (Maadi) | Level 1 | Files: index.html, styles.css

Brief

Write a readable long-form page: lead paragraph, image, headings, a value list with strong keywords and a quotation with attribution.

Learning goals

- Choose text elements by meaning (strong, cite, blockquote)
- Set comfortable reading width and line length
- Mix a serif body with sans-serif headings

Elements and CSS used

HTML elements	CSS features
article, h1, h2, p, img, ul, li, strong, blockquote, footer, cite	max-width, font-family, font-size, border-left, font-style

Build guide

1. Write the article content first, without any CSS.
2. Add the image with alt text and dimensions.
3. Mark values with at the start of each list item.
4. Add the quotation with <blockquote>, a <footer> and <cite>.
5. Limit the width to 42rem and set fonts.
6. Style the blockquote with a coloured left border.

Project 134: index.html

Project 137 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>About Cedar Furniture</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main class="about">	The unique content of this page; exactly one per page.
<article>	A self-contained piece: card, post, product.
About Cedar Furniture	The main heading; only one per page.
<p class="lead">Solid wood furniture made to order, in the heart of...	A paragraph of text.
<img src="images/team.jpg" alt="Tarek Lotfy in front of Cedar Furni...	An image; alt describes it, width and height reserve space before it loads.
Our story	Second-level heading for a section.
<p>Cedar Furniture was founded by Tarek Lotfy with...	Strong importance (bold by default).

Line	What it does
	Unordered (bulleted) list.
Quality. Every piece is checked twice.	One list item.
<blockquote>	A long quotation from another source.
<footer>— <cite>Tarek Lotfy</cite></footer>	Footer of the page or of a section.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #78350f;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 42rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.

Declaration	What it does
font-size: 1.1rem;	Size of the text.
max-width: 100%;	Fills the container width.
height: auto;	Keeps the natural height, preserving image proportions.
border-radius: 12px;	Rounds the corners.
border-left: 5px solid var(--brand);	A thick left border used as an accent stripe.
background: var(--accent);	Background colour or image.

Check your work

- Heading order h1 then h2
- Body line length under 75 characters
- Image responsive
- Quote source in cite

Exercises

1. Add a <details> element with 'Opening hours'.
2. Add a timeline as an ordered list.
3. Add a second column with an <aside> on wide screens.

Theme data for this project

Field	Value
Business	Cedar Furniture
Tagline	Solid wood furniture made to order
City	Damietta
Owner	Tarek Lotfy
Brand colour	#78350f
Accent colour	#fef3c7

Field	Value
Offers	Oak dining table (9500 EGP); Bookshelf (4200 EGP); Bedside table (1500 EGP); Coffee table (2800 EGP)

Project 138: About page for Byte Repair

Theme: Byte Repair (Nasr City) | Level 1 | Files: index.html, styles.css

Brief

Write a readable long-form page: lead paragraph, image, headings, a value list with strong keywords and a quotation with attribution.

Learning goals

- Choose text elements by meaning (strong, cite, blockquote)
- Set comfortable reading width and line length
- Mix a serif body with sans-serif headings

Elements and CSS used

HTML elements	CSS features
article, h1, h2, p, img, ul, li, strong, blockquote, footer, cite	max-width, font-family, font-size, border-left, font-style

Build guide

1. Write the article content first, without any CSS.
2. Add the image with alt text and dimensions.
3. Mark values with at the start of each list item.
4. Add the quotation with <blockquote>, a <footer> and <cite>.
5. Limit the width to 42rem and set fonts.
6. Style the blockquote with a coloured left border.

Project 138: index.html

```
<!DOCTYPE html>

- Body line length under 75 characters
- Image responsive
- Quote source in cite

Exercises

1. Add a <details> element with 'Opening hours'.
2. Add a timeline as an ordered list.
3. Add a second column with an <aside> on wide screens.

Theme data for this project

Field	Value
Business	Habiba Handmade Jewellery
Tagline	Silver and brass pieces inspired by Nubia
City	Aswan
Owner	Habiba Saleh
Brand colour	#a16207
Accent colour	#fefce8

Field	Value
Offers	Lotus pendant (650 EGP); Brass cuff (420 EGP); Bead earrings (180 EGP); Ankh ring (300 EGP)

Project 142: About page for Fayoum Pottery Studio

Theme: Fayoum Pottery Studio (Tunis Village) | Level 1 | Files: index.html, styles.css

Brief

Write a readable long-form page: lead paragraph, image, headings, a value list with strong keywords and a quotation with attribution.

Learning goals

- Choose text elements by meaning (strong, cite, blockquote)
- Set comfortable reading width and line length
- Mix a serif body with sans-serif headings

Elements and CSS used

HTML elements	CSS features
article, h1, h2, p, img, ul, li, strong, blockquote, footer, cite	max-width, font-family, font-size, border-left, font-style

Build guide

1. Write the article content first, without any CSS.
2. Add the image with alt text and dimensions.
3. Mark values with at the start of each list item.
4. Add the quotation with <blockquote>, a <footer> and <cite>.
5. Limit the width to 42rem and set fonts.
6. Style the blockquote with a coloured left border.

Project 142: index.html

Project 145: About page for Luxor Music Academy

Theme: Luxor Music Academy (Luxor) | Level 1 | Files: index.html, styles.css

Brief

Write a readable long-form page: lead paragraph, image, headings, a value list with strong keywords and a quotation with attribution.

Learning goals

- Choose text elements by meaning (strong, cite, blockquote)
- Set comfortable reading width and line length
- Mix a serif body with sans-serif headings

Elements and CSS used

HTML elements	CSS features
article, h1, h2, p, img, ul, li, strong, blockquote, footer, cite	max-width, font-family, font-size, border-left, font-style

Build guide

1. Write the article content first, without any CSS.
2. Add the image with alt text and dimensions.
3. Mark values with at the start of each list item.
4. Add the quotation with <blockquote>, a <footer> and <cite>.
5. Limit the width to 42rem and set fonts.
6. Style the blockquote with a coloured left border.

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>About Luxor Music Academy</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main class="about">	The unique content of this page; exactly one per page.
<article>	A self-contained piece: card, post, product.
About Luxor Music Academy	The main heading; only one per page.
<p class="lead">Oud, piano, guitar and voice lessons, in the heart ...	A paragraph of text.
<img src="images/team.jpg" alt="Salma Ragab in front of Luxor Music...	An image; alt describes it, width and height reserve space before it loads.
Our story	Second-level heading for a section.
<p>Luxor Music Academy was founded by Salma Ragab ...	Strong importance (bold by default).

Line	What it does
	Unordered (bulleted) list.
Quality. Every course is checked twice.	One list item.
<blockquote>	A long quotation from another source.
<footer>— <cite>Salma Ragab</cite></footer>	Footer of the page or of a section.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #4c1d95;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 42rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.

Declaration	What it does
font-size: 1.1rem;	Size of the text.
max-width: 100%;	Fills the container width.
height: auto;	Keeps the natural height, preserving image proportions.
border-radius: 12px;	Rounds the corners.
border-left: 5px solid var(--brand);	A thick left border used as an accent stripe.
background: var(--accent);	Background colour or image.

Check your work

- Heading order h1 then h2
- Body line length under 75 characters
- Image responsive
- Quote source in cite

Exercises

1. Add a <details> element with 'Opening hours'.
2. Add a timeline as an ordered list.
3. Add a second column with an <aside> on wide screens.

Theme data for this project

Field	Value
Business	Luxor Music Academy
Tagline	Oud, piano, guitar and voice lessons
City	Luxor
Owner	Salma Ragab
Brand colour	#4c1d95
Accent colour	#f5f3ff

Field	Value
Offers	Oud for beginners (1600 EGP); Piano grade 1 (1800 EGP); Guitar chords (1400 EGP); Voice coaching (1500 EGP)

Project 146: About page for Port Said Seafood

Theme: Port Said Seafood (Port Said) | Level 1 | Files: index.html, styles.css

height: auto;	Keeps the natural height, preserving image proportions.
border-radius: 12px;	Rounds the corners.
border-left: 5px solid var(--brand);	A thick left border used as an accent stripe.
background: var(--accent);	Background colour or image.

Check your work

- Heading order h1 then h2
- Body line length under 75 characters
- Image responsive
- Quote source in cite

Exercises

1. Add a <details> element with 'Opening hours'.
2. Add a timeline as an ordered list.
3. Add a second column with an <aside> on wide screens.

Theme data for this project

Field	Value
Business	Nubian Guest House
Tagline	Colourful rooms on the west bank of the Nile
City	Aswan
Owner	Fatma Hassan
Brand colour	#b45309
Accent colour	#fffbeb

Field	Value
Offers	Garden room (900 EGP); Nile view suite (1800 EGP); Family room (1500 EGP); Rooftop dorm (300 EGP)

Project 149: About page for Ismailia Cycling Store

Theme: Ismailia Cycling Store (Ismailia) | Level 1 | Files: index.html, styles.css

Brief

Write a readable long-form page: lead paragraph, image, headings, a value list with strong keywords and a quotation with attribution.

Learning goals

- Choose text elements by meaning (strong, cite, blockquote)
- Set comfortable reading width and line length
- Mix a serif body with sans-serif headings

Elements and CSS used

HTML elements	CSS features
article, h1, h2, p, img, ul, li, strong, blockquote, footer, cite	max-width, font-family, font-size, border-left, font-style

Build guide

1. Write the article content first, without any CSS.
2. Add the image with alt text and dimensions.
3. Mark values with at the start of each list item.
4. Add the quotation with <blockquote>, a <footer> and <cite>.
5. Limit the width to 42rem and set fonts.
6. Style the blockquote with a coloured left border.

Project 149: index.html

```
<!DOCTYPE html>
<html lang="en">

Field	Value
Offers	HTML weekend (Free); CSS art (Free); Scratch games (Free); Hackathon (Free)

Project type: Menu list

Level 2 | 25 projects, one per theme

Present offers as a description list where each term shows a name and price joined by dotted leaders, with the description below.

Project 151: Menu list for Cairo Book Shop

Theme: Cairo Book Shop (Giza) | Level 2 | Files: index.html, styles.css

Brief

Present offers as a description list where each term shows a name and price joined by dotted leaders, with the description below.

Learning goals

- Use dl/dt/dd for name-description pairs
- Create dotted price leaders with a flex pseudo-element
- Use the order property

Elements and CSS used

HTML elements	CSS features
dl, div, dt, dd, span	display: flex, justify-content, ::after, order, flex: 1, border-bottom: dotted

Build guide

1. Write the <dl>; group each dt/dd pair in a .
2. Put the price in a inside the dt.
3. Make dt a flex row.
4. Add an empty ::after with flex: 1 and a dotted bottom border - this is the leader line.
5. Use order so the leader sits between the name and the price.
6. Add a dashed separator under each item.

Project 151: index.html

```
<!DOCTYPE html>

<title>Cairo Book Shop - Menu</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
Cairo Book Shop	The main heading; only one per page.
Books and prices	A paragraph of text.
<dl class="menu">	Description list of term / description pairs.
<dt>Learn HTML 120 EGP...	A term (name) in a description list.
<dt>CSS in Practice 150 EGP</...	The description of the preceding term.

Line	What it does
<dt>JavaScript Basics 180 EGP...	Generic inline container for styling.
<dt>Web Accessibility 95 EGP<...	Generic block container for grouping and layout.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #b90000;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 36rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
text-align: center;	Centres inline content such as text.

Declaration	What it does
border-bottom: 1px dashed var(--line);	A bottom border used as a separator line.
display: flex;	Turns the element into a flex container (one-dimensional layout).
justify-content: space-between;	Spreads items so the first touches the start and the last the end.
font-weight: 700;	Thickness of the text.
font-size: 1.1rem;	Size of the text.
dt::after {	Generated content inserted after the element's content.
content: "";	The text or empty string for a pseudo-element.
order: 1;	Changes the visual order of a flex item without changing the source.
flex: 1;	All items share free space equally.
border-bottom: 1px dotted var(--line);	The line around the element: width, style and colour.

Check your work

- Each dt has a dd
- Price stays on the right even for long names
- Leaders do not appear when the name is very long
- Readable on a phone

Exercises

1. Group items under h2 categories.
2. Add a 'chef's choice' badge with a ::before.
3. Print stylesheet: remove colours.

border-bottom: 1px dashed var(--line);	A bottom border used as a separator line.
display: flex;	Turns the element into a flex container (one-dimensional layout).
justify-content: space-between;	Spreads items so the first touches the start and the last the end.
font-weight: 700;	Thickness of the text.
font-size: 1.1rem;	Size of the text.
dt::after {	Generated content inserted after the element's content.
content: "";	The text or empty string for a pseudo-element.
order: 1;	Changes the visual order of a flex item without changing the source.
flex: 1;	All items share free space equally.
border-bottom: 1px dotted var(--line);	The line around the element: width, style and colour.

Check your work

- Each dt has a dd
- Price stays on the right even for long names
- Leaders do not appear when the name is very long
- Readable on a phone

Exercises

1. Group items under h2 categories.
2. Add a 'chef's choice' badge with a ::before.
3. Print stylesheet: remove colours.

Theme data for this project

Field	Value
Business	Nile Bakery
Tagline	Fresh bread and pastries every morning
City	Cairo
Owner	Sara Adel
Brand colour	#a0522d
Accent colour	#fff6ec
Offers	Sourdough loaf (60 EGP); Croissant (35 EGP); Date cookies (80 EGP); Baklava box (220 EGP)

Project 153: Menu list for Pyramid Fitness

Theme: Pyramid Fitness (6th of October) | Level 2 | Files: index.html, styles.css

Brief

Present offers as a description list where each term shows a name and price joined by dotted leaders, with the description below.

Learning goals

- Use dl/dt/dd for name-description pairs
- Create dotted price leaders with a flex pseudo-element
- Use the order property

Elements and CSS used

HTML elements	CSS features
dl, div, dt, dd, span	display: flex, justify-content, ::after, order, flex: 1, border-bottom: dotted

Build guide

1. Write the <dl>; group each dt/dd pair in a .
2. Put the price in a inside the dt.
3. Make dt a flex row.
4. Add an empty ::after with flex: 1 and a dotted bottom border - this is the leader line.
5. Use order so the leader sits between the name and the price.
6. Add a dashed separator under each item.

Project 153: index.html

```

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Pyramid Fitness - Menu</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
Pyramid Fitness	The main heading; only one per page.
Classes and prices	A paragraph of text.
<dl class="menu">	Description list of term / description pairs.
<dt>Morning yoga 100 EGP</spa...	A term (name) in a description list.
<dt>Strength circuit 120 EGP<...	The description of the preceding term.

Line	What it does
<dt>Spinning 110 EGP<//...	Generic inline container for styling.
<dt>Personal training 350 EGP...	Generic block container for grouping and layout.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #0f766e;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 36rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.

Declaration	What it does
text-align: center;	Centres inline content such as text.
border-bottom: 1px dashed var(--line);	A bottom border used as a separator line.
display: flex;	Turns the element into a flex container (one-dimensional layout).
justify-content: space-between;	Spreads items so the first touches the start and the last the end.
font-weight: 700;	Thickness of the text.
font-size: 1.1rem;	Size of the text.
dt::after {	Generated content inserted after the element's content.
content: "";	The text or empty string for a pseudo-element.
order: 1;	Changes the visual order of a flex item without changing the source.
flex: 1;	All items share free space equally.
border-bottom: 1px dotted var(--line);	The line around the element: width, style and colour.

Check your work

font-size: 1.1rem;	Size of the text.
dt::after {	Generated content inserted after the element's content.
content: "";	The text or empty string for a pseudo-element.
order: 1;	Changes the visual order of a flex item without changing the source.
flex: 1;	All items share free space equally.
border-bottom: 1px dotted var(--line);	The line around the element: width, style and colour.

Check your work

- Each dt has a dd
- Price stays on the right even for long names
- Leaders do not appear when the name is very long
- Readable on a phone

Exercises

1. Group items under h2 categories.
2. Add a 'chef's choice' badge with a ::before.
3. Print stylesheet: remove colours.

Theme data for this project

Field	Value
Business	Lotus Language School
Tagline	Learn English, French and German in small groups
City	Alexandria
Owner	Nour El Din
Brand colour	#7c3aed
Accent colour	#f5f3ff
Offers	English A1 (1800 EGP); French B1 (2200 EGP); German A2 (2000 EGP); IELTS preparation (3000 EGP)

Project 157: Menu list for Green Leaf Cafe

Theme: Green Leaf Cafe (Zamalek) | Level 2 | Files: index.html, styles.css

Brief

Present offers as a description list where each term shows a name and price joined by dotted leaders, with the description below.

Learning goals

- Use dl/dt/dd for name-description pairs
- Create dotted price leaders with a flex pseudo-element
- Use the order property

Elements and CSS used

HTML elements	CSS features
dl, div, dt, dd, span	display: flex, justify-content, ::after, order, flex: 1, border-bottom: dotted

Build guide

1. Write the <dl>; group each dt/dd pair in a .
2. Put the price in a inside the dt.
3. Make dt a flex row.
4. Add an empty ::after with flex: 1 and a dotted bottom border - this is the leader line.
5. Use order so the leader sits between the name and the price.
6. Add a dashed separator under each item.

Project 157: index.html

```
<!DOCTYPE html>

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Green Leaf Cafe - Menu</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
Green Leaf Cafe	The main heading; only one per page.
Drinks and prices	A paragraph of text.
<dl class="menu">	Description list of term / description pairs.
<dt>Flat white 55 EGP<...	A term (name) in a description list.
<dt>Cold brew 60 EGP</...	The description of the preceding term.

Line	What it does
<dt>Hibiscus iced tea 40 EGP<...	Generic inline container for styling.
<dt>Cheesecake 75 EGP<...	Generic block container for grouping and layout.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #166534;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 36rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.

Declaration	What it does
text-align: center;	Centres inline content such as text.
border-bottom: 1px dashed var(--line);	A bottom border used as a separator line.
display: flex;	Turns the element into a flex container (one-dimensional layout).
justify-content: space-between;	Spreads items so the first touches the start and the last the end.
font-weight: 700;	Thickness of the text.
font-size: 1.1rem;	Size of the text.
dt::after {	Generated content inserted after the element's content.
content: "";	The text or empty string for a pseudo-element.
order: 1;	Changes the visual order of a flex item without changing the source.
flex: 1;	All items share free space equally.
border-bottom: 1px dotted var(--line);	The line around the element: width, style and colour.

order: 1;	Changes the visual order of a flex item without changing the source.
flex: 1;	All items share free space equally.
border-bottom: 1px dotted var(--line);	The line around the element: width, style and colour.

Check your work

- Each dt has a dd
- Price stays on the right even for long names
- Leaders do not appear when the name is very long
- Readable on a phone

Exercises

1. Group items under h2 categories.
2. Add a 'chef's choice' badge with a ::before.
3. Print stylesheet: remove colours.

Theme data for this project

Field	Value
Business	Papyrus Stationery
Tagline	Notebooks, pens and paper made in Egypt
City	Heliopolis
Owner	Dina Fathy
Brand colour	#be185d
Accent colour	#fdf2f8
Offers	Dotted notebook (140 EGP); Fountain pen (350 EGP); Washi tape set (90 EGP); Desk planner (110 EGP)

Project 161: Menu list for Oasis Plant Nursery

Theme: Oasis Plant Nursery (Sheikh Zayed) | Level 2 | Files: index.html, styles.css

Brief

Present offers as a description list where each term shows a name and price joined by dotted leaders, with the description below.

Learning goals

- Use dl/dt/dd for name-description pairs
- Create dotted price leaders with a flex pseudo-element
- Use the order property

Elements and CSS used

HTML elements	CSS features
dl, div, dt, dd, span	display: flex, justify-content, ::after, order, flex: 1, border-bottom: dotted

Build guide

1. Write the <dl>; group each dt/dd pair in a .
2. Put the price in a inside the dt.
3. Make dt a flex row.
4. Add an empty ::after with flex: 1 and a dotted bottom border - this is the leader line.
5. Use order so the leader sits between the name and the price.
6. Add a dashed separator under each item.

Project 161: index.html

```
<!DOCTYPE html>

Project 161 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Oasis Plant Nursery - Menu</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
Oasis Plant Nursery	The main heading; only one per page.
Plants and prices	A paragraph of text.
<dl class="menu">	Description list of term / description pairs.
<dt>Monstera 250 EGP<//...	A term (name) in a description list.
<dt>Snake plant 120 EGP</span...	The description of the preceding term.

Line	What it does
<dt>Basil pot 45 EGP<//...	Generic inline container for styling.
<dt>Olive tree 600 EGP...	Generic block container for grouping and layout.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #15803d;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 36rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
text-align: center;	Centres inline content such as text.

Declaration	What it does
border-bottom: 1px dashed var(--line);	A bottom border used as a separator line.
display: flex;	Turns the element into a flex container (one-dimensional layout).
justify-content: space-between;	Spreads items so the first touches the start and the last the end.
font-weight: 700;	Thickness of the text.
font-size: 1.1rem;	Size of the text.
dt::after {	Generated content inserted after the element's content.
content: "";	The text or empty string for a pseudo-element.
order: 1;	Changes the visual order of a flex item without changing the source.
flex: 1;	All items share free space equally.
border-bottom: 1px dotted var(--line);	The line around the element: width, style and colour.

Exercises

1. Group items under h2 categories.
2. Add a 'chef's choice' badge with a ::before.
3. Print stylesheet: remove colours.

Theme data for this project

Field	Value
Business	Sahara Pet Care
Tagline	Grooming, boarding and vet visits
City	New Cairo
Owner	Rana Ibrahim
Brand colour	#c2410c
Accent colour	#fff7ed
Offers	Full grooming (400 EGP); Day boarding (250 EGP); Vaccination (300 EGP); Dog walking (100 EGP)

Project 165: Menu list for Alexandria Sailing School

Theme: Alexandria Sailing School (Alexandria) | Level 2 | Files: index.html, styles.css

Brief

Present offers as a description list where each term shows a name and price joined by dotted leaders, with the description below.

Learning goals

- Use dl/dt/dd for name-description pairs
- Create dotted price leaders with a flex pseudo-element
- Use the order property

Elements and CSS used

HTML elements	CSS features
dl, div, dt, dd, span	display: flex, justify-content, ::after, order, flex: 1, border-bottom: dotted

Build guide

1. Write the <dl>; group each dt/dd pair in a .
2. Put the price in a inside the dt.
3. Make dt a flex row.
4. Add an empty ::after with flex: 1 and a dotted bottom border - this is the leader line.
5. Use order so the leader sits between the name and the price.
6. Add a dashed separator under each item.

Project 165: index.html

font-size: 1.1rem; }
dt::after { content: ""; order: 1; flex: 1; border-bottom: 1px dotted
var(--line); margin: 0 .5rem .35rem; }
.price { order: 2; color: var(--brand); }
dd { margin: .25rem 0 0; color: var(--muted); }
```

Project 165 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Alexandria Sailing School - Menu</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
Alexandria Sailing School	The main heading; only one per page.
Lessons and prices	A paragraph of text.
<dl class="menu">	Description list of term / description pairs.
<dt>Taster session 500 EGP</s...	A term (name) in a description list.
<dt>Beginner course 2200 EGP<...	The description of the preceding term.

Line	What it does
<dt>Racing clinic 1800 EGP</s...	Generic inline container for styling.
<dt>Private lesson 900 EGP</s...	Generic block container for grouping and layout.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #1e40af;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 36rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.

Declaration	What it does
text-align: center;	Centres inline content such as text.
border-bottom: 1px dashed var(--line);	A bottom border used as a separator line.
display: flex;	Turns the element into a flex container (one-dimensional layout).
justify-content: space-between;	Spreads items so the first touches the start and the last the end.
font-weight: 700;	Thickness of the text.
font-size: 1.1rem;	Size of the text.
dt::after {	Generated content inserted after the element's content.
content: "";	The text or empty string for a pseudo-element.
order: 1;	Changes the visual order of a flex item without changing the source.
flex: 1;	All items share free space equally.
border-bottom: 1px dotted var(--line);	The line around the element: width, style and colour.

Check your work

- Each dt has a dd
- Price stays on the right even for long names
- Leaders do not appear when the name is very long
- Readable on a phone

Exercises

1. Group items under h2 categories.
2. Add a 'chef's choice' badge with a ::before.
3. Print stylesheet: remove colours.

Accent colour	#fdf2f8
Offers	Haircut and blow-dry (350 EGP); Manicure (200 EGP); Facial (600 EGP); Bridal package (4500 EGP)

Project 169: Menu list for Suez Auto Service

Theme: Suez Auto Service (Suez) | Level 2 | Files: index.html, styles.css

Brief

Present offers as a description list where each term shows a name and price joined by dotted leaders, with the description below.

Learning goals

- Use dl/dt/dd for name-description pairs
- Create dotted price leaders with a flex pseudo-element
- Use the order property

Elements and CSS used

HTML elements	CSS features
dl, div, dt, dd, span	display: flex, justify-content, ::after, order, flex: 1, border-bottom: dotted

Build guide

1. Write the <dl>; group each dt/dd pair in a .
2. Put the price in a inside the dt.
3. Make dt a flex row.
4. Add an empty ::after with flex: 1 and a dotted bottom border - this is the leader line.
5. Use order so the leader sits between the name and the price.
6. Add a dashed separator under each item.

Project 169: index.html

```

dt::after { content: ""; order: 1; flex: 1; border-bottom: 1px dotted
var(--line); margin: 0 .5rem .35rem; }
.price { order: 2; color: var(--brand); }
dd { margin: .25rem 0 0; color: var(--muted); }
```

Project 169 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Suez Auto Service - Menu</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
Suez Auto Service	The main heading; only one per page.
Services and prices	A paragraph of text.
<dl class="menu">	Description list of term / description pairs.
<dt>Oil change 600 EGP...	A term (name) in a description list.
<dt>Brake pads 1400 EGP</span...	The description of the preceding term.

Line	What it does
<dt>Air conditioning 900 EGP<...	Generic inline container for styling.
<dt>Pre-purchase inspection 7...	Generic block container for grouping and layout.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #374151;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 36rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
text-align: center;	Centres inline content such as text.

Declaration	What it does
border-bottom: 1px dashed var(--line);	A bottom border used as a separator line.
display: flex;	Turns the element into a flex container (one-dimensional layout).
justify-content: space-between;	Spreads items so the first touches the start and the last the end.
font-weight: 700;	Thickness of the text.
font-size: 1.1rem;	Size of the text.
dt::after {	Generated content inserted after the element's content.
content: "";	The text or empty string for a pseudo-element.
order: 1;	Changes the visual order of a flex item without changing the source.
flex: 1;	All items share free space equally.
border-bottom: 1px dotted var(--line);	The line around the element: width, style and colour.

Check your work

- Each dt has a dd
- Price stays on the right even for long names
- Leaders do not appear when the name is very long
- Readable on a phone

Exercises

1. Group items under h2 categories.
2. Add a 'chef's choice' badge with a ::before.
3. Print stylesheet: remove colours.

Theme data for this project

Field	Value
Business	Suez Auto Service
Tagline	Honest car servicing and repairs
City	Suez
Owner	Khaled Nasser
Brand colour	#374151
Accent colour	#f9fafb
Offers	Oil change (600 EGP); Brake pads (1400 EGP); Air conditioning (900 EGP); Pre-purchase inspection (750 EGP)

Project 173: Menu list for Nubian Guest House

Theme: Nubian Guest House (Aswan) | Level 2 | Files: index.html, styles.css

Brief

Present offers as a description list where each term shows a name and price joined by dotted leaders, with the description below.

Learning goals

- Use dl/dt/dd for name-description pairs
- Create dotted price leaders with a flex pseudo-element
- Use the order property

Elements and CSS used

HTML elements	CSS features
dl, div, dt, dd, span	display: flex, justify-content, ::after, order, flex: 1, border-bottom: dotted

Build guide

1. Write the <dl>; group each dt/dd pair in a .
2. Put the price in a inside the dt.
3. Make dt a flex row.
4. Add an empty ::after with flex: 1 and a dotted bottom border - this is the leader line.
5. Use order so the leader sits between the name and the price.
6. Add a dashed separator under each item.

Project 173: index.html

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1">
  <title>Nubian Guest House - Menu</title>
  <link rel="stylesheet" href="styles.css">
</head>
<body>
  <main>
    <h1>Nubian Guest House</h1>
    <p class="sub">Rooms and prices</p>
    <dl class="menu">
      <div class="item"><dt>Garden room <span class="price">900 EGP</
span></dt><dd>Double bed, shared terrace</dd></div>
      <div class="item"><dt>Nile view suite <span class="price">1800
EGP</span></dt><dd>Balcony and breakfast</dd></div>
      <div class="item"><dt>Family room <span class="price">1500 EGP</

dt::after { content: ""; order: 1; flex: 1; border-bottom: 1px dotted
var(--line); margin: 0 .5rem .35rem; }
.price { order: 2; color: var(--brand); }
dd { margin: .25rem 0 0; color: var(--muted); }
```

Project 173 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Nubian Guest House - Menu</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
Nubian Guest House	The main heading; only one per page.
Rooms and prices	A paragraph of text.
<dl class="menu">	Description list of term / description pairs.
<dt>Garden room 900 EGP</span...	A term (name) in a description list.
<dt>Nile view suite 1800 EGP<...	The description of the preceding term.

Line	What it does
<dt>Family room 1500 EGP</spa...	Generic inline container for styling.
<dt>Rooftop dorm 300 EGP</spa...	Generic block container for grouping and layout.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #b45309;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 36rem;	Limits how wide the element can grow, keeping lines readable.

Declaration	What it does
padding: 0 1rem;	Space inside the element between its border and content.
text-align: center;	Centres inline content such as text.
border-bottom: 1px dashed var(--line);	A bottom border used as a separator line.
display: flex;	Turns the element into a flex container (one-dimensional layout).
justify-content: space-between;	Spreads items so the first touches the start and the last the end.
font-weight: 700;	Thickness of the text.
font-size: 1.1rem;	Size of the text.
dt::after {	Generated content inserted after the element's content.
content: "";	The text or empty string for a pseudo-element.
order: 1;	Changes the visual order of a flex item without changing the source.
flex: 1;	All items share free space equally.
border-bottom: 1px dotted var(--line);	The line around the element: width, style and colour.

Check your work

- Each dt has a dd
- Price stays on the right even for long names
- Leaders do not appear when the name is very long
- Readable on a phone

Exercises

1. Group items under h2 categories.

2. Add a 'chef's choice' badge with a ::before.
3. Print stylesheet: remove colours.

Theme data for this project

Field	Value
Business	Nubian Guest House
Tagline	Colourful rooms on the west bank of the Nile
City	Aswan
Owner	Fatma Hassan
Brand colour	#b45309
Accent colour	#fffbeb
Offers	Garden room (900 EGP); Nile view suite (1800 EGP); Family room (1500 EGP); Rooftop dorm (300 EGP)

Project 174: Menu list for Ismailia Cycling Store

Theme: Ismailia Cycling Store (Ismailia) | Level 2 | Files: index.html, styles.css

Brief

Present offers as a description list where each term shows a name and price joined by dotted leaders, with the description below.

Learning goals

- Use dl/dt/dd for name-description pairs
- Create dotted price leaders with a flex pseudo-element
- Use the order property

Elements and CSS used

HTML elements	CSS features
dl, div, dt, dd, span	display: flex, justify-content, ::after, order, flex: 1, border-bottom: dotted

Build guide

1. Write the <dl>; group each dt/dd pair in a .
2. Put the price in a inside the dt.
3. Make dt a flex row.
4. Add an empty ::after with flex: 1 and a dotted bottom border - this is the leader line.
5. Use order so the leader sits between the name and the price.
6. Add a dashed separator under each item.

Project type: FAQ accordion

Level 2 | 25 projects, one per theme

Build an accordion of questions and answers with no JavaScript using details and summary, with a custom plus/minus indicator.

Project 176: FAQ accordion for Cairo Book Shop

Theme: Cairo Book Shop (Giza) | Level 2 | Files: index.html, styles.css

Brief

Build an accordion of questions and answers with no JavaScript using details and summary, with a custom plus/minus indicator.

Learning goals

- Use details/summary for native disclosure
- Style the open state with the [open] attribute selector
- Replace the default marker

Elements and CSS used

HTML elements	CSS features
details, summary, p, h1	[open], ::after, content, list-style: none, cursor: pointer, border-radius

Build guide

1. Write one <details> per question; the question goes in <summary>.
2. Add open to the first one so it starts expanded.
3. Remove the default triangle marker.
4. Add a plus sign with summary::after and a minus when open.
5. Give the open summary a background and border.
6. Click and use the keyboard (Tab, Enter) to test.

Project 176: index.html

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1">
  <title>Cairo Book Shop - FAQ</title>
  <link rel="stylesheet" href="styles.css">
</head>
<body>
  <main>
    <h1>Frequently asked questions</h1>
    <details open>
      <summary>How do I book a book?</summary>
      <p>Use the contact form or call us. Popular books fill up
quickly.</p>
    </details>
    <details>
      <summary>Where are you located?</summary>
      <p>We are in Giza. Parking is available nearby.</p>
    </details>
    <details>
      <summary>Do you offer discounts?</summary>
      <p>Students and groups of four or more get 10 percent off.</p>
    </details>
    <details>
      <summary>Can I cancel?</summary>
      <p>Yes, up to 24 hours before, free of charge.</p>
    </details>
  </main>
</body>
</html>
```

Project 176: styles.css

```
*, *::before, *::after { box-sizing: border-box; }
:root { --brand: #b90000; --accent: #f4f1ea; --ink: #1b2431; --muted:
#5b6472; --line: #d9d9d9; }
body { margin: 0; font-family: system-ui, Arial, sans-serif; line-
height: 1.6; color: var(--ink); }
main { max-width: 40rem; margin: 2rem auto; padding: 0 1rem; }
details { border: 1px solid var(--line); border-radius: 10px; margin-
bottom: .75rem; background: #fff; }
summary { padding: .9rem 1.1rem; cursor: pointer; font-weight: 600;
list-style: none; display: flex; justify-content: space-between; }
summary::-webkit-details-marker { display: none; }
summary::after { content: "+"; color: var(--brand); font-size: 1.3rem;
 line-height: 1; }
```

```
details[open] summary::after { content: "\2212"; }
details[open] summary { border-bottom: 1px solid var(--line);
background: var(--accent); }
details p { padding: 0 1.1rem 1rem; margin: .75rem 0 0; }
```

Project 176 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Cairo Book Shop - FAQ</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
Frequently asked questions	The main heading; only one per page.
<details open>	Disclosure widget that can be opened and closed.
<summary>How do I book a book?</summary>	The always-visible heading of a details element.
Use the contact form or call us. Popular books fill up quickly.	A paragraph of text.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #b90000;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 40rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
border: 1px solid var(--line);	Changes the visual order of a flex item without changing the source.
border-radius: 10px;	Rounds the corners.
background: #fff;	Background colour or image.
cursor: pointer;	Shows the hand cursor to indicate something clickable.
font-weight: 600;	Thickness of the text.
list-style: none;	Removes bullets or numbers from a list.
display: flex;	Turns the element into a flex container (one-dimensional layout).

Declaration	What it does
justify-content: space-between;	Spreads items so the first touches the start and the last the end.
display: none;	Removes the element from rendering completely.
summary::after {	Generated content inserted after the element's content.
content: "+";	The text or empty string for a pseudo-element.
font-size: 1.3rem;	Size of the text.
details[open] summary::after {	Attribute selector: a details or dialog that is open.
border-bottom: 1px solid var(--line);	A bottom border used as a separator line.

Check your work

- Summary is the first child
- Works with keyboard
- Only summary is clickable, not the answer
- Indicator changes when open

Exercises

1. Use the name attribute so only one item can be open at once.
2. Animate the opening with interpolate-size or a max-height transition.
3. Add a search box that filters questions with JavaScript.

Theme data for this project

Field	Value
Business	Cairo Book Shop

Brand colour	#b90000
Accent colour	#f4f1ea
Offers	Learn HTML (120 EGP); CSS in Practice (150 EGP); JavaScript Basics (180 EGP); Web Accessibility (95 EGP)

Project 177: FAQ accordion for Nile Bakery

Theme: Nile Bakery (Cairo) | Level 2 | Files: index.html, styles.css

Brief

Build an accordion of questions and answers with no JavaScript using details and summary, with a custom plus/minus indicator.

Learning goals

- Use details/summary for native disclosure
- Style the open state with the [open] attribute selector
- Replace the default marker

Elements and CSS used

HTML elements	CSS features
details, summary, p, h1	[open], ::after, content, list-style: none, cursor: pointer, border-radius

Build guide

1. Write one <details> per question; the question goes in <summary>.
2. Add open to the first one so it starts expanded.
3. Remove the default triangle marker.
4. Add a plus sign with summary::after and a minus when open.
5. Give the open summary a background and border.
6. Click and use the keyboard (Tab, Enter) to test.

Project 177 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Nile Bakery - FAQ</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
Frequently asked questions	The main heading; only one per page.
<details open>	Disclosure widget that can be opened and closed.
<summary>How do I book a pastry?</summary>	The always-visible heading of a details element.
<p>Use the contact form or call us. Popular pastries fill up quickl...	A paragraph of text.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #a0522d;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 40rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
border: 1px solid var(--line);	Changes the visual order of a flex item without changing the source.
border-radius: 10px;	Rounds the corners.
background: #fff;	Background colour or image.
cursor: pointer;	Shows the hand cursor to indicate something clickable.
font-weight: 600;	Thickness of the text.
list-style: none;	Removes bullets or numbers from a list.
display: flex;	Turns the element into a flex container (one-dimensional layout).

Declaration	What it does
justify-content: space-between;	Spreads items so the first touches the start and the last the end.
display: none;	Removes the element from rendering completely.
summary::after {	Generated content inserted after the element's content.
content: "+";	The text or empty string for a pseudo-element.
font-size: 1.3rem;	Size of the text.
details[open] summary::after {	Attribute selector: a details or dialog that is open.
border-bottom: 1px solid var(--line);	A bottom border used as a separator line.

Check your work

- Summary is the first child
- Works with keyboard
- Only summary is clickable, not the answer
- Indicator changes when open

Exercises

1. Use the name attribute so only one item can be open at once.
2. Animate the opening with interpolate-size or a max-height transition.
3. Add a search box that filters questions with JavaScript.

Theme data for this project

Field	Value
Business	Nile Bakery
Tagline	Fresh bread and pastries every morning
City	Cairo
Owner	Sara Adel
Brand colour	#a0522d
Accent colour	#fff6ec
Offers	Sourdough loaf (60 EGP); Croissant (35 EGP); Date cookies (80 EGP); Baklava box (220 EGP)

Project 178: FAQ accordion for Pyramid Fitness

Theme: Pyramid Fitness (6th of October) | Level 2 | Files: index.html, styles.css

Brief

Build an accordion of questions and answers with no JavaScript using details and summary, with a custom plus/minus indicator.

Learning goals

- Use details/summary for native disclosure
- Style the open state with the [open] attribute selector
- Replace the default marker

Elements and CSS used

Project 181 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Lotus Language School - FAQ</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
Frequently asked questions	The main heading; only one per page.
<details open>	Disclosure widget that can be opened and closed.
<summary>How do I book a course?</summary>	The always-visible heading of a details element.
<p>Use the contact form or call us. Popular courses fill up quickly...	A paragraph of text.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #7c3aed;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 40rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
border: 1px solid var(--line);	Changes the visual order of a flex item without changing the source.
border-radius: 10px;	Rounds the corners.
background: #fff;	Background colour or image.
cursor: pointer;	Shows the hand cursor to indicate something clickable.
font-weight: 600;	Thickness of the text.
list-style: none;	Removes bullets or numbers from a list.
display: flex;	Turns the element into a flex container (one-dimensional layout).

Declaration	What it does
justify-content: space-between;	Spreads items so the first touches the start and the last the end.
display: none;	Removes the element from rendering completely.
summary::after {	Generated content inserted after the element's content.
content: "+";	The text or empty string for a pseudo-element.
font-size: 1.3rem;	Size of the text.
details[open] summary::after {	Attribute selector: a details or dialog that is open.
border-bottom: 1px solid var(--line);	A bottom border used as a separator line.

Check your work

- Summary is the first child
- Works with keyboard
- Only summary is clickable, not the answer
- Indicator changes when open

Exercises

1. Use the name attribute so only one item can be open at once.
2. Animate the opening with interpolate-size or a max-height transition.
3. Add a search box that filters questions with JavaScript.

Theme data for this project

Field	Value
Business	Lotus Language School
Tagline	Learn English, French and German in small groups
City	Alexandria
Owner	Nour El Din
Brand colour	#7c3aed
Accent colour	#f5f3ff
Offers	English A1 (1800 EGP); French B1 (2200 EGP); German A2 (2000 EGP); IELTS preparation (3000 EGP)

Project 182: FAQ accordion for Green Leaf Cafe

Theme: Green Leaf Cafe (Zamalek) | Level 2 | Files: index.html, styles.css

Brief

Build an accordion of questions and answers with no JavaScript using details and summary, with a custom plus/minus indicator.

Learning goals

- Use details/summary for native disclosure
- Style the open state with the [open] attribute selector
- Replace the default marker

Elements and CSS used

HTML elements	CSS features
details, summary, p, h1	[open], ::after, content, list-style: none, cursor: pointer, border-radius

Build guide

1. Write one <details> per question; the question goes in <summary>.
2. Add open to the first one so it starts expanded.
3. Remove the default triangle marker.
4. Add a plus sign with summary::after and a minus when open.
5. Give the open summary a background and border.
6. Click and use the keyboard (Tab, Enter) to test.

Project 185 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Papyrus Stationery - FAQ</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
Frequently asked questions	The main heading; only one per page.
<details open>	Disclosure widget that can be opened and closed.
<summary>How do I book a product?</summary>	The always-visible heading of a details element.
<p>Use the contact form or call us. Popular products fill up quickl...	A paragraph of text.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #be185d;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 40rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
border: 1px solid var(--line);	Changes the visual order of a flex item without changing the source.
border-radius: 10px;	Rounds the corners.
background: #fff;	Background colour or image.
cursor: pointer;	Shows the hand cursor to indicate something clickable.
font-weight: 600;	Thickness of the text.
list-style: none;	Removes bullets or numbers from a list.
display: flex;	Turns the element into a flex container (one-dimensional layout).

Declaration	What it does
justify-content: space-between;	Spreads items so the first touches the start and the last the end.
display: none;	Removes the element from rendering completely.
summary::after {	Generated content inserted after the element's content.
content: "+";	The text or empty string for a pseudo-element.
font-size: 1.3rem;	Size of the text.
details[open] summary::after {	Attribute selector: a details or dialog that is open.
border-bottom: 1px solid var(--line);	A bottom border used as a separator line.

Check your work

- Summary is the first child
- Works with keyboard
- Only summary is clickable, not the answer
- Indicator changes when open

Exercises

1. Use the name attribute so only one item can be open at once.
2. Animate the opening with interpolate-size or a max-height transition.
3. Add a search box that filters questions with JavaScript.

Theme data for this project

Field	Value
Business	Papyrus Stationery
Tagline	Notebooks, pens and paper made in Egypt
City	Heliopolis
Owner	Dina Fathy
Brand colour	#be185d
Accent colour	#fdf2f8
Offers	Dotted notebook (140 EGP); Fountain pen (350 EGP); Washi tape set (90 EGP); Desk planner (110 EGP)

Project 186: FAQ accordion for Oasis Plant Nursery

Theme: Oasis Plant Nursery (Sheikh Zayed) | Level 2 | Files: index.html, styles.css

Brief

Build an accordion of questions and answers with no JavaScript using details and summary, with a custom plus/minus indicator.

Learning goals

- Use details/summary for native disclosure
- Style the open state with the [open] attribute selector
- Replace the default marker

Elements and CSS used

HTML elements	CSS features
details, summary, p, h1	[open], ::after, content, list-style: none, cursor: pointer, border-radius

Build guide

1. Write one <details> per question; the question goes in <summary>.
2. Add open to the first one so it starts expanded.
3. Remove the default triangle marker.
4. Add a plus sign with summary::after and a minus when open.
5. Give the open summary a background and border.
6. Click and use the keyboard (Tab, Enter) to test.

Project 189 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Sahara Pet Care - FAQ</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
Frequently asked questions	The main heading; only one per page.
<details open>	Disclosure widget that can be opened and closed.
<summary>How do I book a service?</summary>	The always-visible heading of a details element.
<p>Use the contact form or call us. Popular services fill up quickl...	A paragraph of text.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #c2410c;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 40rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
border: 1px solid var(--line);	Changes the visual order of a flex item without changing the source.
border-radius: 10px;	Rounds the corners.
background: #fff;	Background colour or image.
cursor: pointer;	Shows the hand cursor to indicate something clickable.
font-weight: 600;	Thickness of the text.
list-style: none;	Removes bullets or numbers from a list.
display: flex;	Turns the element into a flex container (one-dimensional layout).

Declaration	What it does
justify-content: space-between;	Spreads items so the first touches the start and the last the end.
display: none;	Removes the element from rendering completely.
summary::after {	Generated content inserted after the element's content.
content: "+";	The text or empty string for a pseudo-element.
font-size: 1.3rem;	Size of the text.
details[open] summary::after {	Attribute selector: a details or dialog that is open.
border-bottom: 1px solid var(--line);	A bottom border used as a separator line.

Check your work

- Summary is the first child
- Works with keyboard
- Only summary is clickable, not the answer
- Indicator changes when open

Exercises

1. Use the name attribute so only one item can be open at once.
2. Animate the opening with interpolate-size or a max-height transition.
3. Add a search box that filters questions with JavaScript.

Theme data for this project

Field	Value
Business	Sahara Pet Care
Tagline	Grooming, boarding and vet visits
City	New Cairo
Owner	Rana Ibrahim
Brand colour	#c2410c
Accent colour	#fff7ed
Offers	Full grooming (400 EGP); Day boarding (250 EGP); Vaccination (300 EGP); Dog walking (100 EGP)

Project 190: FAQ accordion for Alexandria Sailing School

Theme: Alexandria Sailing School (Alexandria) | Level 2 | Files: index.html, styles.css

Brief

Build an accordion of questions and answers with no JavaScript using details and summary, with a custom plus/minus indicator.

Learning goals

- Use details/summary for native disclosure
- Style the open state with the [open] attribute selector
- Replace the default marker

Elements and CSS used

HTML elements	CSS features
details, summary, p, h1	[open], ::after, content, list-style: none, cursor: pointer, border-radius

Build guide

1. Write one <details> per question; the question goes in <summary>.
2. Add open to the first one so it starts expanded.
3. Remove the default triangle marker.
4. Add a plus sign with summary::after and a minus when open.
5. Give the open summary a background and border.
6. Click and use the keyboard (Tab, Enter) to test.

Project 190: index.html

Project 193 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Cleopatra Beauty Salon - FAQ</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
Frequently asked questions	The main heading; only one per page.
<details open>	Disclosure widget that can be opened and closed.
<summary>How do I book a treatment?</summary>	The always-visible heading of a details element.
<p>Use the contact form or call us. Popular treatments fill up quic...	A paragraph of text.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #db2777;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 40rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
border: 1px solid var(--line);	Changes the visual order of a flex item without changing the source.
border-radius: 10px;	Rounds the corners.
background: #fff;	Background colour or image.
cursor: pointer;	Shows the hand cursor to indicate something clickable.
font-weight: 600;	Thickness of the text.
list-style: none;	Removes bullets or numbers from a list.
display: flex;	Turns the element into a flex container (one-dimensional layout).

Declaration	What it does
justify-content: space-between;	Spreads items so the first touches the start and the last the end.
display: none;	Removes the element from rendering completely.
summary::after {	Generated content inserted after the element's content.
content: "+";	The text or empty string for a pseudo-element.
font-size: 1.3rem;	Size of the text.
details[open] summary::after {	Attribute selector: a details or dialog that is open.
border-bottom: 1px solid var(--line);	A bottom border used as a separator line.

Check your work

- Summary is the first child
- Works with keyboard
- Only summary is clickable, not the answer
- Indicator changes when open

Exercises

1. Use the name attribute so only one item can be open at once.
2. Animate the opening with interpolate-size or a max-height transition.
3. Add a search box that filters questions with JavaScript.

Theme data for this project

Field	Value
Business	Cleopatra Beauty Salon
Tagline	Hair, nails and skin care
City	Dokki
Owner	Mariam Adel
Brand colour	#db2777
Accent colour	#fdf2f8
Offers	Haircut and blow-dry (350 EGP); Manicure (200 EGP); Facial (600 EGP); Bridal package (4500 EGP)

Project 194: FAQ accordion for Suez Auto Service

Theme: Suez Auto Service (Suez) | Level 2 | Files: index.html, styles.css

Brief

Build an accordion of questions and answers with no JavaScript using details and summary, with a custom plus/minus indicator.

Learning goals

- Use details/summary for native disclosure
- Style the open state with the [open] attribute selector
- Replace the default marker

Elements and CSS used

HTML elements	CSS features
details, summary, p, h1	[open], ::after, content, list-style: none, cursor: pointer, border-radius

Build guide

1. Write one <details> per question; the question goes in <summary>.
2. Add open to the first one so it starts expanded.
3. Remove the default triangle marker.
4. Add a plus sign with summary::after and a minus when open.
5. Give the open summary a background and border.
6. Click and use the keyboard (Tab, Enter) to test.

Project 197 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Delta Kids Library - FAQ</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
Frequently asked questions	The main heading; only one per page.
<details open>	Disclosure widget that can be opened and closed.
<summary>How do I book a programme?</summary>	The always-visible heading of a details element.
<p>Use the contact form or call us. Popular programmes fill up quic...	A paragraph of text.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #ea580c;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 40rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
border: 1px solid var(--line);	Changes the visual order of a flex item without changing the source.
border-radius: 10px;	Rounds the corners.
background: #fff;	Background colour or image.
cursor: pointer;	Shows the hand cursor to indicate something clickable.
font-weight: 600;	Thickness of the text.
list-style: none;	Removes bullets or numbers from a list.
display: flex;	Turns the element into a flex container (one-dimensional layout).

Declaration	What it does
justify-content: space-between;	Spreads items so the first touches the start and the last the end.
display: none;	Removes the element from rendering completely.
summary::after {	Generated content inserted after the element's content.
content: "+";	The text or empty string for a pseudo-element.
font-size: 1.3rem;	Size of the text.
details[open] summary::after {	Attribute selector: a details or dialog that is open.
border-bottom: 1px solid var(--line);	A bottom border used as a separator line.

Check your work

- Summary is the first child
- Works with keyboard
- Only summary is clickable, not the answer
- Indicator changes when open

Exercises

1. Use the name attribute so only one item can be open at once.
2. Animate the opening with interpolate-size or a max-height transition.
3. Add a search box that filters questions with JavaScript.

Theme data for this project

Field	Value
Business	Delta Kids Library
Tagline	Stories, reading clubs and homework help
City	Tanta
Owner	Ghada Kamel
Brand colour	#ea580c
Accent colour	#fff7ed
Offers	Story hour (Free); Reading club (50 EGP per month); Homework help (Free); Summer challenge (Free)

Project 198: FAQ accordion for Nubian Guest House

Theme: Nubian Guest House (Aswan) | Level 2 | Files: index.html, styles.css

Brief

Build an accordion of questions and answers with no JavaScript using details and summary, with a custom plus/minus indicator.

Learning goals

- Use details/summary for native disclosure
- Style the open state with the [open] attribute selector
- Replace the default marker

Elements and CSS used

HTML elements	CSS features
details, summary, p, h1	[open], ::after, content, list-style: none, cursor: pointer, border-radius

Build guide

1. Write one <details> per question; the question goes in <summary>.
2. Add open to the first one so it starts expanded.
3. Remove the default triangle marker.
4. Add a plus sign with summary::after and a minus when open.
5. Give the open summary a background and border.
6. Click and use the keyboard (Tab, Enter) to test.

Owner	Youssef Hany
Brand colour	#2563eb
Accent colour	#eff6ff
Offers	HTML weekend (Free); CSS art (Free); Scratch games (Free); Hackathon (Free)

Project type: Product card

Level 1 | 25 projects, one per theme

Design a single product card: image on top, small uppercase label, title, description, price and a full-width button, centred on the page.

Project 201: Product card for Cairo Book Shop

Theme: Cairo Book Shop (Giza) | Level 1 | Files: index.html, styles.css

Brief

Design a single product card: image on top, small uppercase label, title, description, price and a full-width button, centred on the page.

Learning goals

- Centre a component with display: grid and place-items
- Build a shadowed card with rounded corners
- Use text-transform and letter-spacing for labels

Elements and CSS used

HTML elements	CSS features
article, img, div, p, h1, a	place-items: center, box-shadow, border-radius, overflow: hidden, text-transform, letter-spacing, filter

Build guide

1. Write the article with the image first, then a .body div.
2. Add the kicker, title, description, price and button.
3. Centre the card in main with grid and place-items.
4. Round the card corners; hide overflow so the image follows the rounding.
5. Add a soft box shadow.
6. Darken the button slightly on hover with filter.

Project 201 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Learn HTML - Cairo Book Shop</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
<article class="card">	A self-contained piece: card, post, product.
<img src="images/bookshop-1.jpg" alt="Learn HTML" width="600" heigh...	An image; alt describes it, width and height reserve space before it loads.
	Generic block container for grouping and layout.
Book	A paragraph of text.
Learn HTML	The main heading; only one per page.
Book now	A link styled as a button; it navigates, so it is a link and not a <button>.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #b90000;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
min-height: 100vh;	At least as tall as the viewport.
display: grid;	Turns the element into a grid container.
place-items: center;	Centres items horizontally and vertically in a grid.
background: var(--accent);	Background colour or image.
padding: 1rem;	Space inside the element between its border and content.
max-width: 22rem;	Limits how wide the element can grow, keeping lines readable.
border-radius: 16px;	Rounds the corners.
overflow: hidden;	Clips content that sticks out, so images follow rounded corners.

Declaration	What it does
box-shadow: 0 10px 30px rgb(0 0 0 / 12%);	Soft shadow that lifts the element from the page.
display: block;	Element starts on a new line and fills the width (used on links and images).
width: 100%;	Fills the container width.
height: auto;	Keeps the natural height, preserving image proportions.
text-transform: uppercase;	Displays text in capitals without changing the HTML.
letter-spacing: .08em;	Adds space between letters; useful for small capitals.
font-size: .75rem;	Size of the text.
font-weight: 700;	Thickness of the text.
text-align: center;	Centres inline content such as text.
border-radius: 10px;	The line around the element: width, style and colour.
text-decoration: none;	Removes the underline from links.
.btn:hover {	Applies while the pointer is over the element.
filter: brightness(.9);	Darkens or brightens the element; a cheap hover effect.

Check your work

- Image corners rounded with the card
- Card is centred vertically and horizontally
- Button is full width
- Text contrast passes

Exercises

1. Turn it into a grid of four cards.
2. Add a 'sold out' ribbon positioned absolutely.
3. Make the image and text side by side above 600px.

Theme data for this project

Field	Value
Business	Cairo Book Shop
Tagline	PDF and printed books about web development
City	Giza
Owner	Mohamed Khattab
Brand colour	#b90000
Accent colour	#f4f1ea
Offers	Learn HTML (120 EGP); CSS in Practice (150 EGP); JavaScript Basics (180 EGP); Web Accessibility (95 EGP)

Project 202: Product card for Nile Bakery

Theme: Nile Bakery (Cairo) | Level 1 | Files: index.html, styles.css

Brief

Design a single product card: image on top, small uppercase label, title, description, price and a full-width button, centred on the page.

Learning goals

- Centre a component with display: grid and place-items
- Build a shadowed card with rounded corners
- Use text-transform and letter-spacing for labels

Elements and CSS used

HTML elements	CSS features
article, img, div, p, h1, a	place-items: center, box-shadow, border-radius, overflow: hidden, text-transform, letter-spacing, filter

Build guide

1. Write the article with the image first, then a .body div.
2. Add the kicker, title, description, price and button.
3. Centre the card in main with grid and place-items.
4. Round the card corners; hide overflow so the image follows the rounding.
5. Add a soft box shadow.
6. Darken the button slightly on hover with filter.

Project 202: index.html

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1">
  <title>Sourdough loaf - Nile Bakery</title>
  <link rel="stylesheet" href="styles.css">
</head>
<body>
  <main>
    <article class="card">
      <img src="images/bakery-1.jpg" alt="Sourdough loaf" width="600"
height="400">
      <div class="body">
        <p class="kicker">Pastry</p>
        <h1>Sourdough loaf</h1>
        <p>Slow fermented, crisp crust.</p>
        <p class="price">60 EGP</p>
        <a class="btn" href="book.html">Book now</a>

Project 205 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Luxor day trip - Red Sea Travel</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
<article class="card">	A self-contained piece: card, post, product.
<img src="images/travel-1.jpg" alt="Luxor day trip" width="600" hei...	An image; alt describes it, width and height reserve space before it loads.
	Generic block container for grouping and layout.
Tour	A paragraph of text.
Luxor day trip	The main heading; only one per page.
Book now	A link styled as a button; it navigates, so it is a link and not a <button>.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #0369a1;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
min-height: 100vh;	At least as tall as the viewport.
display: grid;	Turns the element into a grid container.
place-items: center;	Centres items horizontally and vertically in a grid.
background: var(--accent);	Background colour or image.
padding: 1rem;	Space inside the element between its border and content.
max-width: 22rem;	Limits how wide the element can grow, keeping lines readable.
border-radius: 16px;	Rounds the corners.
overflow: hidden;	Clips content that sticks out, so images follow rounded corners.

Declaration	What it does
box-shadow: 0 10px 30px rgb(0 0 0 / 12%);	Soft shadow that lifts the element from the page.
display: block;	Element starts on a new line and fills the width (used on links and images).
width: 100%;	Fills the container width.
height: auto;	Keeps the natural height, preserving image proportions.
text-transform: uppercase;	Displays text in capitals without changing the HTML.
letter-spacing: .08em;	Adds space between letters; useful for small capitals.
font-size: .75rem;	Size of the text.
font-weight: 700;	Thickness of the text.
text-align: center;	Centres inline content such as text.
border-radius: 10px;	The line around the element: width, style and colour.
text-decoration: none;	Removes the underline from links.
.btn:hover {	Applies while the pointer is over the element.
filter: brightness(.9);	Darkens or brightens the element; a cheap hover effect.

Check your work

- Image corners rounded with the card
- Card is centred vertically and horizontally
- Button is full width
- Text contrast passes

Exercises

1. Turn it into a grid of four cards.
2. Add a 'sold out' ribbon positioned absolutely.
3. Make the image and text side by side above 600px.

Theme data for this project

City	Hurghada
Owner	Laila Mansour
Brand colour	#0369a1
Accent colour	#f0f9ff
Offers	Luxor day trip (1200 EGP); Snorkelling (700 EGP); Desert safari (900 EGP); Nile cruise (6500 EGP)

Project 206: Product card for Lotus Language School

Theme: Lotus Language School (Alexandria) | Level 1 | Files: index.html, styles.css

Brief

Design a single product card: image on top, small uppercase label, title, description, price and a full-width button, centred on the page.

Learning goals

- Centre a component with display: grid and place-items
- Build a shadowed card with rounded corners
- Use text-transform and letter-spacing for labels

Elements and CSS used

HTML elements	CSS features
article, img, div, p, h1, a	place-items: center, box-shadow, border-radius, overflow: hidden, text-transform, letter-spacing, filter

Build guide

1. Write the article with the image first, then a .body div.
2. Add the kicker, title, description, price and button.
3. Centre the card in main with grid and place-items.
4. Round the card corners; hide overflow so the image follows the rounding.
5. Add a soft box shadow.
6. Darken the button slightly on hover with filter.

Project 206: index.html

```
<!DOCTYPE html>

width: 100%;	Fills the container width.
height: auto;	Keeps the natural height, preserving image proportions.
text-transform: uppercase;	Displays text in capitals without changing the HTML.
letter-spacing: .08em;	Adds space between letters; useful for small capitals.
font-size: .75rem;	Size of the text.
font-weight: 700;	Thickness of the text.
text-align: center;	Centres inline content such as text.
border-radius: 10px;	The line around the element: width, style and colour.
text-decoration: none;	Removes the underline from links.
.btn:hover {	Applies while the pointer is over the element.
filter: brightness(.9);	Darkens or brightens the element; a cheap hover effect.

Check your work

- Image corners rounded with the card
- Card is centred vertically and horizontally
- Button is full width
- Text contrast passes

Exercises

1. Turn it into a grid of four cards.
2. Add a 'sold out' ribbon positioned absolutely.
3. Make the image and text side by side above 600px.

Theme data for this project

Field	Value
Business	Sinai Trekking Club
Tagline	Guided mountain walks for every level
City	Saint Catherine
Owner	Yara Hamdy
Brand colour	#92400e
Accent colour	#fffbeb
Offers	Mount Sinai sunrise (400 EGP); Blue Desert loop (250 EGP); Wadi Gnai (300 EGP); Three-day traverse (1900 EGP)

Project 209: Product card for Horizon Photography

Theme: Horizon Photography (Maadi) | Level 1 | Files: index.html, styles.css

Brief

Design a single product card: image on top, small uppercase label, title, description, price and a full-width button, centred on the page.

Learning goals

- Centre a component with display: grid and place-items
- Build a shadowed card with rounded corners
- Use text-transform and letter-spacing for labels

Elements and CSS used

HTML elements	CSS features
article, img, div, p, h1, a	place-items: center, box-shadow, border-radius, overflow: hidden, text-transform, letter-spacing, filter

Build guide

1. Write the article with the image first, then a .body div.
2. Add the kicker, title, description, price and button.
3. Centre the card in main with grid and place-items.
4. Round the card corners; hide overflow so the image follows the rounding.
5. Add a soft box shadow.
6. Darken the button slightly on hover with filter.

Project 209: index.html

```
<!DOCTYPE html>

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Portrait session - Horizon Photography</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
<article class="card">	A self-contained piece: card, post, product.
<img src="images/photo-1.jpg" alt="Portrait session" width="600" he...	An image; alt describes it, width and height reserve space before it loads.
	Generic block container for grouping and layout.
Session	A paragraph of text.
Portrait session	The main heading; only one per page.
Book now	A link styled as a button; it navigates, so it is a link and not a <button>.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #111827;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
min-height: 100vh;	At least as tall as the viewport.
display: grid;	Turns the element into a grid container.
place-items: center;	Centres items horizontally and vertically in a grid.
background: var(--accent);	Background colour or image.
padding: 1rem;	Space inside the element between its border and content.
max-width: 22rem;	Limits how wide the element can grow, keeping lines readable.
border-radius: 16px;	Rounds the corners.
overflow: hidden;	Clips content that sticks out, so images follow rounded corners.

Declaration	What it does
box-shadow: 0 10px 30px rgb(0 0 0 / 12%);	Soft shadow that lifts the element from the page.
display: block;	Element starts on a new line and fills the width (used on links and images).
width: 100%;	Fills the container width.
height: auto;	Keeps the natural height, preserving image proportions.
text-transform: uppercase;	Displays text in capitals without changing the HTML.
letter-spacing: .08em;	Adds space between letters; useful for small capitals.
font-size: .75rem;	Size of the text.
font-weight: 700;	Thickness of the text.
text-align: center;	Centres inline content such as text.
border-radius: 10px;	The line around the element: width, style and colour.
text-decoration: none;	Removes the underline from links.
.btn:hover {	Applies while the pointer is over the element.
filter: brightness(.9);	Darkens or brightens the element; a cheap hover effect.

Check your work

<img src="images/furniture-1.jpg" alt="Oak dining table" width="600...	An image; alt describes it, width and height reserve space before it loads.
	Generic block container for grouping and layout.
Piece	A paragraph of text.
Oak dining table	The main heading; only one per page.
Book now	A link styled as a button; it navigates, so it is a link and not a <button>.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #78350f;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
min-height: 100vh;	At least as tall as the viewport.
display: grid;	Turns the element into a grid container.
place-items: center;	Centres items horizontally and vertically in a grid.
background: var(--accent);	Background colour or image.
padding: 1rem;	Space inside the element between its border and content.
max-width: 22rem;	Limits how wide the element can grow, keeping lines readable.
border-radius: 16px;	Rounds the corners.
overflow: hidden;	Clips content that sticks out, so images follow rounded corners.

Declaration	What it does
box-shadow: 0 10px 30px rgb(0 0 0 / 12%);	Soft shadow that lifts the element from the page.
display: block;	Element starts on a new line and fills the width (used on links and images).
width: 100%;	Fills the container width.
height: auto;	Keeps the natural height, preserving image proportions.
text-transform: uppercase;	Displays text in capitals without changing the HTML.
letter-spacing: .08em;	Adds space between letters; useful for small capitals.
font-size: .75rem;	Size of the text.
font-weight: 700;	Thickness of the text.
text-align: center;	Centres inline content such as text.
border-radius: 10px;	The line around the element: width, style and colour.
text-decoration: none;	Removes the underline from links.
.btn:hover {	Applies while the pointer is over the element.
filter: brightness(.9);	Darkens or brightens the element; a cheap hover effect.

Check your work

- Image corners rounded with the card
- Card is centred vertically and horizontally
- Button is full width
- Text contrast passes

Exercises

1. Turn it into a grid of four cards.
2. Add a 'sold out' ribbon positioned absolutely.
3. Make the image and text side by side above 600px.

Theme data for this project

Field	Value
Business	Cedar Furniture
Tagline	Solid wood furniture made to order
City	Damietta
Owner	Tarek Lotfy
Brand colour	#78350f
Accent colour	#fef3c7
Offers	Oak dining table (9500 EGP); Bookshelf (4200 EGP); Bedside table (1500 EGP); Coffee table (2800 EGP)

Project 213: Product card for Byte Repair

Theme: Byte Repair (Nasr City) | Level 1 | Files: index.html, styles.css

Brief

Design a single product card: image on top, small uppercase label, title, description, price and a full-width button, centred on the page.

Learning goals

- Centre a component with display: grid and place-items
- Build a shadowed card with rounded corners
- Use text-transform and letter-spacing for labels

Elements and CSS used

HTML elements	CSS features
article, img, div, p, h1, a	place-items: center, box-shadow, border-radius, overflow: hidden, text-transform, letter-spacing, filter

Build guide

1. Write the article with the image first, then a .body div.
2. Add the kicker, title, description, price and button.
3. Centre the card in main with grid and place-items.
4. Round the card corners; hide overflow so the image follows the rounding.
5. Add a soft box shadow.
6. Darken the button slightly on hover with filter.

Project 213: index.html

```
<!DOCTYPE html>
<html lang="en">

Project 216 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Lotus pendant - Habiba Handmade Jewellery</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
<article class="card">	A self-contained piece: card, post, product.
<img src="images/jewellery-1.jpg" alt="Lotus pendant" width="600" h...	An image; alt describes it, width and height reserve space before it loads.
	Generic block container for grouping and layout.
Item	A paragraph of text.
Lotus pendant	The main heading; only one per page.
Book now	A link styled as a button; it navigates, so it is a link and not a <button>.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #a16207;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
min-height: 100vh;	At least as tall as the viewport.
display: grid;	Turns the element into a grid container.
place-items: center;	Centres items horizontally and vertically in a grid.
background: var(--accent);	Background colour or image.
padding: 1rem;	Space inside the element between its border and content.
max-width: 22rem;	Limits how wide the element can grow, keeping lines readable.
border-radius: 16px;	Rounds the corners.
overflow: hidden;	Clips content that sticks out, so images follow rounded corners.

Declaration	What it does
box-shadow: 0 10px 30px rgb(0 0 0 / 12%);	Soft shadow that lifts the element from the page.
display: block;	Element starts on a new line and fills the width (used on links and images).
width: 100%;	Fills the container width.
height: auto;	Keeps the natural height, preserving image proportions.
text-transform: uppercase;	Displays text in capitals without changing the HTML.
letter-spacing: .08em;	Adds space between letters; useful for small capitals.
font-size: .75rem;	Size of the text.
font-weight: 700;	Thickness of the text.
text-align: center;	Centres inline content such as text.
border-radius: 10px;	The line around the element: width, style and colour.
text-decoration: none;	Removes the underline from links.
.btn:hover {	Applies while the pointer is over the element.
filter: brightness(.9);	Darkens or brightens the element; a cheap hover effect.

Check your work

- Image corners rounded with the card
- Card is centred vertically and horizontally
- Button is full width
- Text contrast passes

Exercises

1. Turn it into a grid of four cards.
2. Add a 'sold out' ribbon positioned absolutely.
3. Make the image and text side by side above 600px.

Theme data for this project

Field	Value
Business	Habiba Handmade Jewellery
Tagline	Silver and brass pieces inspired by Nubia
City	Aswan
Owner	Habiba Saleh
Brand colour	#a16207
Accent colour	#fefce8
Offers	Lotus pendant (650 EGP); Brass cuff (420 EGP); Bead earrings (180 EGP); Ankh ring (300 EGP)

Project 217: Product card for Fayoum Pottery Studio

Theme: Fayoum Pottery Studio (Tunis Village) | Level 1 | Files: index.html, styles.css

Brief

Design a single product card: image on top, small uppercase label, title, description, price and a full-width button, centred on the page.

Learning goals

- Centre a component with display: grid and place-items
- Build a shadowed card with rounded corners
- Use text-transform and letter-spacing for labels

Elements and CSS used

HTML elements	CSS features
article, img, div, p, h1, a	place-items: center, box-shadow, border-radius, overflow: hidden, text-transform, letter-spacing, filter

Build guide

1. Write the article with the image first, then a .body div.
2. Add the kicker, title, description, price and button.
3. Centre the card in main with grid and place-items.
4. Round the card corners; hide overflow so the image follows the rounding.
5. Add a soft box shadow.
6. Darken the button slightly on hover with filter.

Project 217: index.html

```

Design a single product card: image on top, small uppercase label, title, description, price and a full-width button, centred on the page.

Learning goals

- Centre a component with display: grid and place-items
- Build a shadowed card with rounded corners
- Use text-transform and letter-spacing for labels

Elements and CSS used

HTML elements	CSS features
article, img, div, p, h1, a	place-items: center, box-shadow, border-radius, overflow: hidden, text-transform, letter-spacing, filter

Build guide

1. Write the article with the image first, then a .body div.
2. Add the kicker, title, description, price and button.
3. Centre the card in main with grid and place-items.
4. Round the card corners; hide overflow so the image follows the rounding.
5. Add a soft box shadow.
6. Darken the button slightly on hover with filter.

Project 220 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Oud for beginners - Luxor Music Academy</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
<article class="card">	A self-contained piece: card, post, product.
<img src="images/music-1.jpg" alt="Oud for beginners" width="600" h...	An image; alt describes it, width and height reserve space before it loads.
	Generic block container for grouping and layout.
Course	A paragraph of text.
Oud for beginners	The main heading; only one per page.
Book now	A link styled as a button; it navigates, so it is a link and not a <button>.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #4c1d95;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
min-height: 100vh;	At least as tall as the viewport.
display: grid;	Turns the element into a grid container.
place-items: center;	Centres items horizontally and vertically in a grid.
background: var(--accent);	Background colour or image.
padding: 1rem;	Space inside the element between its border and content.
max-width: 22rem;	Limits how wide the element can grow, keeping lines readable.
border-radius: 16px;	Rounds the corners.
overflow: hidden;	Clips content that sticks out, so images follow rounded corners.

Declaration	What it does
box-shadow: 0 10px 30px rgb(0 0 0 / 12%);	Soft shadow that lifts the element from the page.
display: block;	Element starts on a new line and fills the width (used on links and images).
width: 100%;	Fills the container width.
height: auto;	Keeps the natural height, preserving image proportions.
text-transform: uppercase;	Displays text in capitals without changing the HTML.
letter-spacing: .08em;	Adds space between letters; useful for small capitals.
font-size: .75rem;	Size of the text.
font-weight: 700;	Thickness of the text.
text-align: center;	Centres inline content such as text.
border-radius: 10px;	The line around the element: width, style and colour.
text-decoration: none;	Removes the underline from links.
.btn:hover {	Applies while the pointer is over the element.
filter: brightness(.9);	Darkens or brightens the element; a cheap hover effect.

Check your work

- Image corners rounded with the card
- Card is centred vertically and horizontally
- Button is full width
- Text contrast passes

Exercises

1. Turn it into a grid of four cards.
2. Add a 'sold out' ribbon positioned absolutely.
3. Make the image and text side by side above 600px.

border-radius: 16px;	Rounds the corners.
overflow: hidden;	Clips content that sticks out, so images follow rounded corners.
box-shadow: 0 10px 30px rgb(0 0 0 / 12%);	Soft shadow that lifts the element from the page.

Declaration	What it does
display: block;	Element starts on a new line and fills the width (used on links and images).
width: 100%;	Fills the container width.
height: auto;	Keeps the natural height, preserving image proportions.
text-transform: uppercase;	Displays text in capitals without changing the HTML.
letter-spacing: .08em;	Adds space between letters; useful for small capitals.
font-size: .75rem;	Size of the text.
font-weight: 700;	Thickness of the text.
text-align: center;	Centres inline content such as text.
border-radius: 10px;	The line around the element: width, style and colour.
text-decoration: none;	Removes the underline from links.
.btn:hover {	Applies while the pointer is over the element.
filter: brightness(.9);	Darkens or brightens the element; a cheap hover effect.

Check your work

- Image corners rounded with the card
- Card is centred vertically and horizontally
- Button is full width
- Text contrast passes

Exercises

1. Turn it into a grid of four cards.
2. Add a 'sold out' ribbon positioned absolutely.

3. Make the image and text side by side above 600px.

Theme data for this project

Field	Value
Business	Nubian Guest House
Tagline	Colourful rooms on the west bank of the Nile
City	Aswan
Owner	Fatma Hassan
Brand colour	#b45309
Accent colour	#fffbeb
Offers	Garden room (900 EGP); Nile view suite (1800 EGP); Family room (1500 EGP); Rooftop dorm (300 EGP)

Project 224: Product card for Ismailia Cycling Store

Theme: Ismailia Cycling Store (Ismailia) | Level 1 | Files: index.html, styles.css

Brief

Design a single product card: image on top, small uppercase label, title, description, price and a full-width button, centred on the page.

Learning goals

- Centre a component with display: grid and place-items
- Build a shadowed card with rounded corners
- Use text-transform and letter-spacing for labels

Elements and CSS used

HTML elements	CSS features
article, img, div, p, h1, a	place-items: center, box-shadow, border-radius, overflow: hidden, text-transform, letter-spacing, filter

Build guide

1. Write the article with the image first, then a .body div.
2. Add the kicker, title, description, price and button.
3. Centre the card in main with grid and place-items.
4. Round the card corners; hide overflow so the image follows the rounding.
5. Add a soft box shadow.
6. Darken the button slightly on hover with filter.

Project 224: index.html

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1">
  <title>City bike - Ismailia Cycling Store</title>
  <link rel="stylesheet" href="styles.css">
</head>
<body>
  <main>
    <article class="card">
      <img src="images/cycling-1.jpg" alt="City bike" width="600"
height="400">
      <div class="body">
        <p class="kicker">Bike</p>
        <h1>City bike</h1>
        <p>Seven gears, basket.</p>
        <p class="price">6500 EGP</p>
        <a class="btn" href="book.html">Book now</a>
      </div>
    </article>
  </main>
</body>
</html>
```

Project 224: styles.css

```
*, *::before, *::after { box-sizing: border-box; }

Project 224 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>City bike - Ismailia Cycling Store</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
<article class="card">	A self-contained piece: card, post, product.
<img src="images/cycling-1.jpg" alt="City bike" width="600" height=...	An image; alt describes it, width and height reserve space before it loads.
	Generic block container for grouping and layout.
Bike	A paragraph of text.
City bike	The main heading; only one per page.
Book now	A link styled as a button; it navigates, so it is a link and not a <button>.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #dc2626;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
min-height: 100vh;	At least as tall as the viewport.
display: grid;	Turns the element into a grid container.
place-items: center;	Centres items horizontally and vertically in a grid.
background: var(--accent);	Background colour or image.
padding: 1rem;	Space inside the element between its border and content.
max-width: 22rem;	Limits how wide the element can grow, keeping lines readable.
border-radius: 16px;	Rounds the corners.
overflow: hidden;	Clips content that sticks out, so images follow rounded corners.

Declaration	What it does
box-shadow: 0 10px 30px rgb(0 0 0 / 12%);	Soft shadow that lifts the element from the page.
display: block;	Element starts on a new line and fills the width (used on links and images).
width: 100%;	Fills the container width.
height: auto;	Keeps the natural height, preserving image proportions.
text-transform: uppercase;	Displays text in capitals without changing the HTML.
letter-spacing: .08em;	Adds space between letters; useful for small capitals.
font-size: .75rem;	Size of the text.
font-weight: 700;	Thickness of the text.
text-align: center;	Centres inline content such as text.
border-radius: 10px;	The line around the element: width, style and colour.
text-decoration: none;	Removes the underline from links.
.btn:hover {	Applies while the pointer is over the element.
filter: brightness(.9);	Darkens or brightens the element; a cheap hover effect.

Check your work

- Image corners rounded with the card
- Card is centred vertically and horizontally
- Button is full width
- Text contrast passes

Exercises

1. Turn it into a grid of four cards.
2. Add a 'sold out' ribbon positioned absolutely.
3. Make the image and text side by side above 600px.

Check your work

- Image corners rounded with the card
- Card is centred vertically and horizontally
- Button is full width
- Text contrast passes

Exercises

1. Turn it into a grid of four cards.
2. Add a 'sold out' ribbon positioned absolutely.
3. Make the image and text side by side above 600px.

Theme data for this project

Field	Value
Business	Minya Coding Club
Tagline	Free weekend coding for teenagers
City	Minya
Owner	Youssef Hany
Brand colour	#2563eb
Accent colour	#eff6ff
Offers	HTML weekend (Free); CSS art (Free); Scratch games (Free); Hackathon (Free)

Project type: Site footer

Level 1 | 25 projects, one per theme

Build a three-column footer (about, links, contact) that stays at the bottom of short pages, with a legal line underneath.

Project 226: Site footer for Cairo Book Shop

Theme: Cairo Book Shop (Giza) | Level 1 | Files: index.html, styles.css

Brief

Build a three-column footer (about, links, contact) that stays at the bottom of short pages, with a legal line underneath.

Learning goals

- Make a sticky footer with flex column body
- Use address for contact details
- Lay out columns with auto-fit grid

Elements and CSS used

HTML elements	CSS features
footer, section, nav, h2, ul, li, a, address, br, p	min-height: 100vh, flex: 1, grid, text-transform, border-top, font-size

Build guide

1. Write main content followed by <footer class="site-footer">.
2. Inside, add a .cols div with three blocks: section, nav, section.
3. Add the legal paragraph after .cols.
4. Make body a flex column with min-height 100vh and main flex: 1 - this pushes the footer down.
5. Grid the columns.
6. Style headings small and uppercase; reset list styles.

Project 226: index.html

```
<!DOCTYPE html>

Project 226 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Cairo Book Shop</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
Cairo Book Shop	The main heading; only one per page.
Scroll down to see the footer.	A paragraph of text.
<footer class="site-footer">	Footer of the page or of a section.
	Generic block container for grouping and layout.
<section>	A thematic group of content, normally with its own heading.
Cairo Book Shop	Second-level heading for a section.
<nav aria-label="Footer">	A block of navigation links; aria-label names it for screen readers.
	Unordered (bulleted) list.

Line	What it does
Learn HTML	A hyperlink; href gives the destination.
CSS in Practice	One list item.
<address>Giza, Egypt <a href="mailto:hello@bookshop.example">hel...	Contact information for the page or article.
<p class="legal">© 2026 Cairo Book Shop · <a href="priv...	Character entity for the copyright sign.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #b90000;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
min-height: 100vh;	At least as tall as the viewport.

Declaration	What it does
display: flex;	Turns the element into a flex container (one-dimensional layout).
flex-direction: column;	Stacks flex items vertically.
flex: 1;	All items share free space equally.
padding: 2rem 1rem;	Space inside the element between its border and content.
background: #1b2431;	Background colour or image.
max-width: 60rem;	Limits how wide the element can grow, keeping lines readable.
margin: 0 auto;	Centres a block horizontally: zero top/bottom, automatic left/right.
display: grid;	Turns the element into a grid container.
gap: 2rem;	Space between grid or flex items without extra margins.
grid-template-columns: repeat(auto-fit, minmax(14rem, 1fr));	Defines the columns of the grid.
font-size: 1rem;	Size of the text.
text-transform: uppercase;	Displays text in capitals without changing the HTML.
letter-spacing: .06em;	Adds space between letters; useful for small capitals.
list-style: none;	Removes bullets or numbers from a list.
border-top: 1px solid #334155;	A top border used as an accent or separator.
text-align: center;	Centres inline content such as text.

Check your work

- Footer sits at the bottom even with little content

- Links are readable on the dark background
- address not italic
- Columns stack on phones

Exercises

1. Add social media icons as SVG links.
2. Add a newsletter form in a fourth column.
3. Make the 'Back to top' link smooth-scroll with scroll-behavior.

Theme data for this project

Project 227 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Nile Bakery</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
Nile Bakery	The main heading; only one per page.
Scroll down to see the footer.	A paragraph of text.
<footer class="site-footer">	Footer of the page or of a section.
	Generic block container for grouping and layout.
<section>	A thematic group of content, normally with its own heading.
Nile Bakery	Second-level heading for a section.
<nav aria-label="Footer">	A block of navigation links; aria-label names it for screen readers.
	Unordered (bulleted) list.

Line	What it does
Sourdough loaf	A hyperlink; href gives the destination.
Croissant	One list item.
<address>Cairo, Egypt <a href="mailto:hello@bakery.example">hell...	Contact information for the page or article.
<p class="legal">© 2026 Nile Bakery · <a href="privacy....	Character entity for the copyright sign.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #a0522d;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
min-height: 100vh;	At least as tall as the viewport.

Declaration	What it does
display: flex;	Turns the element into a flex container (one-dimensional layout).
flex-direction: column;	Stacks flex items vertically.
flex: 1;	All items share free space equally.
padding: 2rem 1rem;	Space inside the element between its border and content.
background: #1b2431;	Background colour or image.
max-width: 60rem;	Limits how wide the element can grow, keeping lines readable.
margin: 0 auto;	Centres a block horizontally: zero top/bottom, automatic left/right.
display: grid;	Turns the element into a grid container.
gap: 2rem;	Space between grid or flex items without extra margins.
grid-template-columns: repeat(auto-fit, minmax(14rem, 1fr));	Defines the columns of the grid.
font-size: 1rem;	Size of the text.
text-transform: uppercase;	Displays text in capitals without changing the HTML.
letter-spacing: .06em;	Adds space between letters; useful for small capitals.
list-style: none;	Removes bullets or numbers from a list.
border-top: 1px solid #334155;	A top border used as an accent or separator.
text-align: center;	Centres inline content such as text.

Check your work

- Footer sits at the bottom even with little content

- Links are readable on the dark background
- address not italic
- Columns stack on phones

Exercises

1. Add social media icons as SVG links.
2. Add a newsletter form in a fourth column.
3. Make the 'Back to top' link smooth-scroll with scroll-behavior.

Theme data for this project

Field	Value
Business	Nile Bakery
Tagline	Fresh bread and pastries every morning
City	Cairo
Owner	Sara Adel
Brand colour	#a0522d
Accent colour	#fff6ec
Offers	Sourdough loaf (60 EGP); Croissant (35 EGP); Date cookies (80 EGP); Baklava box (220 EGP)

Project 228: Site footer for Pyramid Fitness

Theme: Pyramid Fitness (6th of October) | Level 1 | Files: index.html, styles.css

Brief

Build a three-column footer (about, links, contact) that stays at the bottom of short pages, with a legal line underneath.

Learning goals

- Make a sticky footer with flex column body
- Use address for contact details
- Lay out columns with auto-fit grid

Elements and CSS used

HTML elements	CSS features
footer, section, nav, h2, ul, li, a, address, br, p	min-height: 100vh, flex: 1, grid, text-transform, border-top, font-size

Build guide

1. Write main content followed by <footer class="site-footer">.
2. Inside, add a .cols div with three blocks: section, nav, section.
3. Add the legal paragraph after .cols.
4. Make body a flex column with min-height 100vh and main flex: 1 - this pushes the footer down.
5. Grid the columns.
6. Style headings small and uppercase; reset list styles.

Project 228: index.html

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="utf-8">

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #0369a1;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
min-height: 100vh;	At least as tall as the viewport.

Declaration	What it does
display: flex;	Turns the element into a flex container (one-dimensional layout).
flex-direction: column;	Stacks flex items vertically.
flex: 1;	All items share free space equally.
padding: 2rem 1rem;	Space inside the element between its border and content.
background: #1b2431;	Background colour or image.
max-width: 60rem;	Limits how wide the element can grow, keeping lines readable.
margin: 0 auto;	Centres a block horizontally: zero top/bottom, automatic left/right.
display: grid;	Turns the element into a grid container.
gap: 2rem;	Space between grid or flex items without extra margins.
grid-template-columns: repeat(auto-fit, minmax(14rem, 1fr));	Defines the columns of the grid.
font-size: 1rem;	Size of the text.
text-transform: uppercase;	Displays text in capitals without changing the HTML.
letter-spacing: .06em;	Adds space between letters; useful for small capitals.
list-style: none;	Removes bullets or numbers from a list.
border-top: 1px solid #334155;	A top border used as an accent or separator.
text-align: center;	Centres inline content such as text.

Check your work

- Footer sits at the bottom even with little content

- Links are readable on the dark background
- address not italic
- Columns stack on phones

Exercises

1. Add social media icons as SVG links.
2. Add a newsletter form in a fourth column.
3. Make the 'Back to top' link smooth-scroll with scroll-behavior.

Theme data for this project

Field	Value
Business	Red Sea Travel
Tagline	Discover Egypt from desert to reef
City	Hurghada
Owner	Laila Mansour
Brand colour	#0369a1
Accent colour	#f0f9ff
Offers	Luxor day trip (1200 EGP); Snorkelling (700 EGP); Desert safari (900 EGP); Nile cruise (6500 EGP)

Project 231: Site footer for Lotus Language School

Theme: Lotus Language School (Alexandria) | Level 1 | Files: index.html, styles.css

Brief

Build a three-column footer (about, links, contact) that stays at the bottom of short pages, with a legal line underneath.

Learning goals

- Make a sticky footer with flex column body
- Use address for contact details
- Lay out columns with auto-fit grid

Elements and CSS used

HTML elements	CSS features
footer, section, nav, h2, ul, li, a, address, br, p	min-height: 100vh, flex: 1, grid, text-transform, border-top, font-size

Build guide

1. Write main content followed by <footer class="site-footer">.
2. Inside, add a .cols div with three blocks: section, nav, section.
3. Add the legal paragraph after .cols.
4. Make body a flex column with min-height 100vh and main flex: 1 - this pushes the footer down.
5. Grid the columns.
6. Style headings small and uppercase; reset list styles.

Project 231: index.html

```

display: grid;	Turns the element into a grid container.
gap: 2rem;	Space between grid or flex items without extra margins.
grid-template-columns: repeat(auto-fit, minmax(14rem, 1fr));	Defines the columns of the grid.
font-size: 1rem;	Size of the text.
text-transform: uppercase;	Displays text in capitals without changing the HTML.
letter-spacing: .06em;	Adds space between letters; useful for small capitals.
list-style: none;	Removes bullets or numbers from a list.
border-top: 1px solid #334155;	A top border used as an accent or separator.
text-align: center;	Centres inline content such as text.

Check your work

- Footer sits at the bottom even with little content

- Links are readable on the dark background
- address not italic
- Columns stack on phones

Exercises

1. Add social media icons as SVG links.
2. Add a newsletter form in a fourth column.
3. Make the 'Back to top' link smooth-scroll with scroll-behavior.

Theme data for this project

Field	Value
Business	Sinai Trekking Club
Tagline	Guided mountain walks for every level
City	Saint Catherine
Owner	Yara Hamdy
Brand colour	#92400e
Accent colour	#fffbeb
Offers	Mount Sinai sunrise (400 EGP); Blue Desert loop (250 EGP); Wadi Gnai (300 EGP); Three-day traverse (1900 EGP)

Project 234: Site footer for Horizon Photography

Theme: Horizon Photography (Maadi) | Level 1 | Files: index.html, styles.css

Brief

Build a three-column footer (about, links, contact) that stays at the bottom of short pages, with a legal line underneath.

Learning goals

- Make a sticky footer with flex column body
- Use address for contact details
- Lay out columns with auto-fit grid

Elements and CSS used

HTML elements	CSS features
footer, section, nav, h2, ul, li, a, address, br, p	min-height: 100vh, flex: 1, grid, text-transform, border-top, font-size

Build guide

1. Write main content followed by <footer class="site-footer">.
2. Inside, add a .cols div with three blocks: section, nav, section.
3. Add the legal paragraph after .cols.
4. Make body a flex column with min-height 100vh and main flex: 1 - this pushes the footer down.
5. Grid the columns.
6. Style headings small and uppercase; reset list styles.

Project 234: index.html

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1">
  <title>Horizon Photography</title>
  <link rel="stylesheet" href="styles.css">
</head>
<body>
  <main>
    <h1>Horizon Photography</h1>
    <p>Scroll down to see the footer.</p>
  </main>
  <footer class="site-footer">
    <div class="cols">
      <section>
        <h2>Horizon Photography</h2>
        <p>Portraits, weddings and product photography.</p>
      </section>
      <nav aria-label="Footer">
        <h2>Sessions</h2>
        <ul>
    <li><a href="#">Portrait session</a></li>
    <li><a href="#">Wedding day</a></li>
    <li><a href="#">Product shoot</a></li>
    <li><a href="#">Family session</a></li>
        </ul>
      </nav>
      <section>
        <h2>Contact</h2>
        <address>Maadi, Egypt<br><a href="mailto:hello@photo.
example">hello@photo.example</a><br><a href="tel:+20100000000">+20

Project 234 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Horizon Photography</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
Horizon Photography	The main heading; only one per page.
Scroll down to see the footer.	A paragraph of text.
<footer class="site-footer">	Footer of the page or of a section.
	Generic block container for grouping and layout.
<section>	A thematic group of content, normally with its own heading.
Horizon Photography	Second-level heading for a section.
<nav aria-label="Footer">	A block of navigation links; aria-label names it for screen readers.

Line	What it does
	Unordered (bulleted) list.
Portrait session	A hyperlink; href gives the destination.
Wedding day	One list item.
<address>Maadi, Egypt <a href="mailto:hello@photo.example">hello...	Contact information for the page or article.
<p class="legal">© 2026 Horizon Photography · <a href="...	Character entity for the copyright sign.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #111827;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
min-height: 100vh;	At least as tall as the viewport.

Declaration	What it does
display: flex;	Turns the element into a flex container (one-dimensional layout).
flex-direction: column;	Stacks flex items vertically.
flex: 1;	All items share free space equally.
padding: 2rem 1rem;	Space inside the element between its border and content.
background: #1b2431;	Background colour or image.
max-width: 60rem;	Limits how wide the element can grow, keeping lines readable.
margin: 0 auto;	Centres a block horizontally: zero top/bottom, automatic left/right.
display: grid;	Turns the element into a grid container.
gap: 2rem;	Space between grid or flex items without extra margins.
grid-template-columns: repeat(auto-fit, minmax(14rem, 1fr));	Defines the columns of the grid.
font-size: 1rem;	Size of the text.
text-transform: uppercase;	Displays text in capitals without changing the HTML.
letter-spacing: .06em;	Adds space between letters; useful for small capitals.
list-style: none;	Removes bullets or numbers from a list.
border-top: 1px solid #334155;	A top border used as an accent or separator.
text-align: center;	Centres inline content such as text.

Project 237 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Cedar Furniture</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
Cedar Furniture	The main heading; only one per page.
Scroll down to see the footer.	A paragraph of text.
<footer class="site-footer">	Footer of the page or of a section.
	Generic block container for grouping and layout.
<section>	A thematic group of content, normally with its own heading.
Cedar Furniture	Second-level heading for a section.
<nav aria-label="Footer">	A block of navigation links; aria-label names it for screen readers.
	Unordered (bulleted) list.

Line	What it does
Oak dining table	A hyperlink; href gives the destination.
Bookshelf	One list item.
<address>Damietta, Egypt <a href="mailto:hello@furniture.example...	Contact information for the page or article.
<p class="legal">© 2026 Cedar Furniture · <a href="priv...	Character entity for the copyright sign.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #78350f;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
min-height: 100vh;	At least as tall as the viewport.

Declaration	What it does
display: flex;	Turns the element into a flex container (one-dimensional layout).
flex-direction: column;	Stacks flex items vertically.
flex: 1;	All items share free space equally.
padding: 2rem 1rem;	Space inside the element between its border and content.
background: #1b2431;	Background colour or image.
max-width: 60rem;	Limits how wide the element can grow, keeping lines readable.
margin: 0 auto;	Centres a block horizontally: zero top/bottom, automatic left/right.
display: grid;	Turns the element into a grid container.
gap: 2rem;	Space between grid or flex items without extra margins.
grid-template-columns: repeat(auto-fit, minmax(14rem, 1fr));	Defines the columns of the grid.
font-size: 1rem;	Size of the text.
text-transform: uppercase;	Displays text in capitals without changing the HTML.
letter-spacing: .06em;	Adds space between letters; useful for small capitals.
list-style: none;	Removes bullets or numbers from a list.
border-top: 1px solid #334155;	A top border used as an accent or separator.
text-align: center;	Centres inline content such as text.

Check your work

- Footer sits at the bottom even with little content

- Links are readable on the dark background
- address not italic
- Columns stack on phones

Exercises

1. Add social media icons as SVG links.
2. Add a newsletter form in a fourth column.
3. Make the 'Back to top' link smooth-scroll with scroll-behavior.

Theme data for this project

Field	Value
Business	Cedar Furniture
Tagline	Solid wood furniture made to order
City	Damietta
Owner	Tarek Lotfy
Brand colour	#78350f
Accent colour	#fef3c7
Offers	Oak dining table (9500 EGP); Bookshelf (4200 EGP); Bedside table (1500 EGP); Coffee table (2800 EGP)

Project 238: Site footer for Byte Repair

Theme: Byte Repair (Nasr City) | Level 1 | Files: index.html, styles.css

Brief

Build a three-column footer (about, links, contact) that stays at the bottom of short pages, with a legal line underneath.

Learning goals

- Make a sticky footer with flex column body
- Use address for contact details
- Lay out columns with auto-fit grid

Elements and CSS used

HTML elements	CSS features
footer, section, nav, h2, ul, li, a, address, br, p	min-height: 100vh, flex: 1, grid, text-transform, border-top, font-size

Build guide

1. Write main content followed by <footer class="site-footer">.
2. Inside, add a .cols div with three blocks: section, nav, section.
3. Add the legal paragraph after .cols.
4. Make body a flex column with min-height 100vh and main flex: 1 - this pushes the footer down.
5. Grid the columns.
6. Style headings small and uppercase; reset list styles.

Project 238: index.html

```
<!DOCTYPE html>

Project 240: Site footer for Alexandria Sailing School

Theme: Alexandria Sailing School (Alexandria) | Level 1 | Files: index.html, styles.css

Brief

Build a three-column footer (about, links, contact) that stays at the bottom of short pages, with a legal line underneath.

Learning goals

- Make a sticky footer with flex column body
- Use address for contact details
- Lay out columns with auto-fit grid

Elements and CSS used

HTML elements	CSS features
footer, section, nav, h2, ul, li, a, address, br, p	min-height: 100vh, flex: 1, grid, text-transform, border-top, font-size

Build guide

1. Write main content followed by <footer class="site-footer">.
2. Inside, add a .cols div with three blocks: section, nav, section.
3. Add the legal paragraph after .cols.
4. Make body a flex column with min-height 100vh and main flex: 1 - this pushes the footer down.
5. Grid the columns.
6. Style headings small and uppercase; reset list styles.

Project 240 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Alexandria Sailing School</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
Alexandria Sailing School	The main heading; only one per page.
Scroll down to see the footer.	A paragraph of text.
<footer class="site-footer">	Footer of the page or of a section.
	Generic block container for grouping and layout.
<section>	A thematic group of content, normally with its own heading.
Alexandria Sailing School	Second-level heading for a section.
<nav aria-label="Footer">	A block of navigation links; aria-label names it for screen readers.

Line	What it does
	Unordered (bulleted) list.
Taster session	A hyperlink; href gives the destination.
Beginner course	One list item.
<address>Alexandria, Egypt <a href="mailto:hello@sailing.example...	Contact information for the page or article.
<p class="legal">© 2026 Alexandria Sailing School · <a ...	Character entity for the copyright sign.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #1e40af;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
min-height: 100vh;	At least as tall as the viewport.

Declaration	What it does
display: flex;	Turns the element into a flex container (one-dimensional layout).
flex-direction: column;	Stacks flex items vertically.
flex: 1;	All items share free space equally.
padding: 2rem 1rem;	Space inside the element between its border and content.
background: #1b2431;	Background colour or image.
max-width: 60rem;	Limits how wide the element can grow, keeping lines readable.
margin: 0 auto;	Centres a block horizontally: zero top/bottom, automatic left/right.
display: grid;	Turns the element into a grid container.
gap: 2rem;	Space between grid or flex items without extra margins.
grid-template-columns: repeat(auto-fit, minmax(14rem, 1fr));	Defines the columns of the grid.
font-size: 1rem;	Size of the text.
text-transform: uppercase;	Displays text in capitals without changing the HTML.
letter-spacing: .06em;	Adds space between letters; useful for small capitals.
list-style: none;	Removes bullets or numbers from a list.
border-top: 1px solid #334155;	A top border used as an accent or separator.
text-align: center;	Centres inline content such as text.

Check your work

- Footer sits at the bottom even with little content

- Links are readable on the dark background
- address not italic
- Columns stack on phones

Exercises

1. Add social media icons as SVG links.
2. Add a newsletter form in a fourth column.
3. Make the 'Back to top' link smooth-scroll with scroll-behavior.

Theme data for this project

Field	Value
Business	Alexandria Sailing School
Tagline	Learn to sail on the Mediterranean
City	Alexandria
Owner	Amr Selim
Brand colour	#1e40af
Accent colour	#eff6ff
Offers	Taster session (500 EGP); Beginner course (2200 EGP); Racing clinic (1800 EGP); Private lesson (900 EGP)

Project 241: Site footer for Habiba Handmade Jewellery

Theme: Habiba Handmade Jewellery (Aswan) | Level 1 | Files: index.html, styles.css

Brief

Build a three-column footer (about, links, contact) that stays at the bottom of short pages, with a legal line underneath.

Learning goals

- Make a sticky footer with flex column body
- Use address for contact details
- Lay out columns with auto-fit grid

Elements and CSS used

HTML elements	CSS features
footer, section, nav, h2, ul, li, a, address, br, p	min-height: 100vh, flex: 1, grid, text-transform, border-top, font-size

Build guide

1. Write main content followed by <footer class="site-footer">.
2. Inside, add a .cols div with three blocks: section, nav, section.
3. Add the legal paragraph after .cols.
4. Make body a flex column with min-height 100vh and main flex: 1 - this pushes the footer down.
5. Grid the columns.
6. Style headings small and uppercase; reset list styles.

Project 241: index.html

```

Project 243: Site footer for Cleopatra Beauty Salon

Theme: Cleopatra Beauty Salon (Dokki) | Level 1 | Files: index.html, styles.css

Brief

Build a three-column footer (about, links, contact) that stays at the bottom of short pages, with a legal line underneath.

Learning goals

- Make a sticky footer with flex column body
- Use address for contact details
- Lay out columns with auto-fit grid

Elements and CSS used

HTML elements	CSS features
footer, section, nav, h2, ul, li, a, address, br, p	min-height: 100vh, flex: 1, grid, text-transform, border-top, font-size

Build guide

1. Write main content followed by <footer class="site-footer">.
2. Inside, add a .cols div with three blocks: section, nav, section.
3. Add the legal paragraph after .cols.
4. Make body a flex column with min-height 100vh and main flex: 1 - this pushes the footer down.
5. Grid the columns.
6. Style headings small and uppercase; reset list styles.

Project 243: index.html

	Unordered (bulleted) list.
Haircut and blow-dry	A hyperlink; href gives the destination.
Manicure	One list item.
<address>Dokki, Egypt <a href="mailto:hello@salon.example">hello...	Contact information for the page or article.
<p class="legal">© 2026 Cleopatra Beauty Salon · <a hre...	Character entity for the copyright sign.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #db2777;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
min-height: 100vh;	At least as tall as the viewport.

Declaration	What it does
display: flex;	Turns the element into a flex container (one-dimensional layout).
flex-direction: column;	Stacks flex items vertically.
flex: 1;	All items share free space equally.
padding: 2rem 1rem;	Space inside the element between its border and content.
background: #1b2431;	Background colour or image.
max-width: 60rem;	Limits how wide the element can grow, keeping lines readable.
margin: 0 auto;	Centres a block horizontally: zero top/bottom, automatic left/right.
display: grid;	Turns the element into a grid container.
gap: 2rem;	Space between grid or flex items without extra margins.
grid-template-columns: repeat(auto-fit, minmax(14rem, 1fr));	Defines the columns of the grid.
font-size: 1rem;	Size of the text.
text-transform: uppercase;	Displays text in capitals without changing the HTML.
letter-spacing: .06em;	Adds space between letters; useful for small capitals.
list-style: none;	Removes bullets or numbers from a list.
border-top: 1px solid #334155;	A top border used as an accent or separator.
text-align: center;	Centres inline content such as text.

Check your work

- Footer sits at the bottom even with little content

- Links are readable on the dark background
- address not italic
- Columns stack on phones

Exercises

1. Add social media icons as SVG links.
2. Add a newsletter form in a fourth column.
3. Make the 'Back to top' link smooth-scroll with scroll-behavior.

Theme data for this project

Field	Value
Business	Cleopatra Beauty Salon
Tagline	Hair, nails and skin care
City	Dokki
Owner	Mariam Adel
Brand colour	#db2777
Accent colour	#fdf2f8
Offers	Haircut and blow-dry (350 EGP); Manicure (200 EGP); Facial (600 EGP); Bridal package (4500 EGP)

Project 244: Site footer for Suez Auto Service

Theme: Suez Auto Service (Suez) | Level 1 | Files: index.html, styles.css

Brief

Build a three-column footer (about, links, contact) that stays at the bottom of short pages, with a legal line underneath.

Learning goals

- Make a sticky footer with flex column body
- Use address for contact details
- Lay out columns with auto-fit grid

Elements and CSS used

HTML elements	CSS features
footer, section, nav, h2, ul, li, a, address, br, p	min-height: 100vh, flex: 1, grid, text-transform, border-top, font-size

Build guide

1. Write main content followed by <footer class="site-footer">.
2. Inside, add a .cols div with three blocks: section, nav, section.
3. Add the legal paragraph after .cols.
4. Make body a flex column with min-height 100vh and main flex: 1 - this pushes the footer down.
5. Grid the columns.
6. Style headings small and uppercase; reset list styles.

Project 244: index.html

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1">

- Footer sits at the bottom even with little content

- Links are readable on the dark background
- address not italic
- Columns stack on phones

Exercises

1. Add social media icons as SVG links.
2. Add a newsletter form in a fourth column.
3. Make the 'Back to top' link smooth-scroll with scroll-behavior.

Theme data for this project

Field	Value
Business	Port Said Seafood
Tagline	Grilled fish straight from the boats
City	Port Said
Owner	Sherif Wahba
Brand colour	#0e7490
Accent colour	#ecfeff
Offers	Grilled sea bass (320 EGP); Shrimp tagine (280 EGP); Calamari (190 EGP); Fish soup (120 EGP)

Project 247: Site footer for Delta Kids Library

Theme: Delta Kids Library (Tanta) | Level 1 | Files: index.html, styles.css

Brief

Build a three-column footer (about, links, contact) that stays at the bottom of short pages, with a legal line underneath.

Learning goals

- Make a sticky footer with flex column body
- Use address for contact details
- Lay out columns with auto-fit grid

Elements and CSS used

HTML elements	CSS features
footer, section, nav, h2, ul, li, a, address, br, p	min-height: 100vh, flex: 1, grid, text-transform, border-top, font-size

Build guide

1. Write main content followed by <footer class="site-footer">.
2. Inside, add a .cols div with three blocks: section, nav, section.
3. Add the legal paragraph after .cols.
4. Make body a flex column with min-height 100vh and main flex: 1 - this pushes the footer down.
5. Grid the columns.
6. Style headings small and uppercase; reset list styles.

Project 247: index.html

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1">
  <title>Delta Kids Library</title>
  <link rel="stylesheet" href="styles.css">
</head>
<body>
  <main>
    <h1>Delta Kids Library</h1>
    <p>Scroll down to see the footer.</p>
  </main>
  <footer class="site-footer">
    <div class="cols">
      <section>
        <h2>Delta Kids Library</h2>
        <p>Stories, reading clubs and homework help.</p>
      </section>
      <nav aria-label="Footer">
        <h2>Programmes</h2>
        <ul>
    <li><a href="#">Story hour</a></li>
    <li><a href="#">Reading club</a></li>
    <li><a href="#">Homework help</a></li>
    <li><a href="#">Summer challenge</a></li>
        </ul>
      </nav>
      <section>
        <h2>Contact</h2>
        <address>Tanta, Egypt<br><a href="mailto:hello@library.
example">hello@library.example</a><br><a href="tel:+20100000000">+20

.site-footer a { color: #fff; }
address { font-style: normal; line-height: 1.8; }
.legal { max-width: 60rem; margin: 2rem auto 0; padding-top: 1rem;
border-top: 1px solid #334155; font-size: .85rem; text-align: center;
}
```

Project 247 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Delta Kids Library</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
Delta Kids Library	The main heading; only one per page.
Scroll down to see the footer.	A paragraph of text.
<footer class="site-footer">	Footer of the page or of a section.
	Generic block container for grouping and layout.
<section>	A thematic group of content, normally with its own heading.
Delta Kids Library	Second-level heading for a section.
<nav aria-label="Footer">	A block of navigation links; aria-label names it for screen readers.
	Unordered (bulleted) list.

Line	What it does
Story hour	A hyperlink; href gives the destination.
Reading club	One list item.
<address>Tanta, Egypt <a href="mailto:hello@library.example">hel...	Contact information for the page or article.
<p class="legal">© 2026 Delta Kids Library · <a href="p...	Character entity for the copyright sign.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #ea580c;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
min-height: 100vh;	At least as tall as the viewport.

Declaration	What it does
display: flex;	Turns the element into a flex container (one-dimensional layout).
flex-direction: column;	Stacks flex items vertically.
flex: 1;	All items share free space equally.
padding: 2rem 1rem;	Space inside the element between its border and content.
background: #1b2431;	Background colour or image.
max-width: 60rem;	Limits how wide the element can grow, keeping lines readable.
margin: 0 auto;	Centres a block horizontally: zero top/bottom, automatic left/right.
display: grid;	Turns the element into a grid container.
gap: 2rem;	Space between grid or flex items without extra margins.
grid-template-columns: repeat(auto-fit, minmax(14rem, 1fr));	Defines the columns of the grid.
font-size: 1rem;	Size of the text.
text-transform: uppercase;	Displays text in capitals without changing the HTML.
letter-spacing: .06em;	Adds space between letters; useful for small capitals.
list-style: none;	Removes bullets or numbers from a list.
border-top: 1px solid #334155;	A top border used as an accent or separator.
text-align: center;	Centres inline content such as text.

Check your work

- Footer sits at the bottom even with little content

- Links are readable on the dark background
- address not italic
- Columns stack on phones

Exercises

1. Add social media icons as SVG links.
2. Add a newsletter form in a fourth column.
3. Make the 'Back to top' link smooth-scroll with scroll-behavior.

Project 250 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Minya Coding Club</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
Minya Coding Club	The main heading; only one per page.
Scroll down to see the footer.	A paragraph of text.
<footer class="site-footer">	Footer of the page or of a section.
	Generic block container for grouping and layout.
<section>	A thematic group of content, normally with its own heading.
Minya Coding Club	Second-level heading for a section.
<nav aria-label="Footer">	A block of navigation links; aria-label names it for screen readers.
	Unordered (bulleted) list.

Line	What it does
HTML weekend	A hyperlink; href gives the destination.
CSS art	One list item.
<address>Minya, Egypt <a href="mailto:hello@coding.example">hell...	Contact information for the page or article.
<p class="legal">© 2026 Minya Coding Club · <a href="pr...	Character entity for the copyright sign.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #2563eb;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
min-height: 100vh;	At least as tall as the viewport.

Declaration	What it does
display: flex;	Turns the element into a flex container (one-dimensional layout).
flex-direction: column;	Stacks flex items vertically.
flex: 1;	All items share free space equally.
padding: 2rem 1rem;	Space inside the element between its border and content.
background: #1b2431;	Background colour or image.
max-width: 60rem;	Limits how wide the element can grow, keeping lines readable.
margin: 0 auto;	Centres a block horizontally: zero top/bottom, automatic left/right.
display: grid;	Turns the element into a grid container.
gap: 2rem;	Space between grid or flex items without extra margins.
grid-template-columns: repeat(auto-fit, minmax(14rem, 1fr));	Defines the columns of the grid.
font-size: 1rem;	Size of the text.
text-transform: uppercase;	Displays text in capitals without changing the HTML.
letter-spacing: .06em;	Adds space between letters; useful for small capitals.
list-style: none;	Removes bullets or numbers from a list.
border-top: 1px solid #334155;	A top border used as an accent or separator.
text-align: center;	Centres inline content such as text.

Check your work

- Footer sits at the bottom even with little content

- Links are readable on the dark background
- address not italic
- Columns stack on phones

Exercises

1. Add social media icons as SVG links.
2. Add a newsletter form in a fourth column.
3. Make the 'Back to top' link smooth-scroll with scroll-behavior.

Theme data for this project

Field	Value
Business	Minya Coding Club
Tagline	Free weekend coding for teenagers
City	Minya
Owner	Youssef Hany
Brand colour	#2563eb
Accent colour	#eff6ff
Offers	HTML weekend (Free); CSS art (Free); Scratch games (Free); Hackathon (Free)

Project type: Full-screen hero banner

Level 2 | 25 projects, one per theme

Build a hero section that fills most of the screen with a background photo, a dark overlay for contrast, centred text and a button.

Project 251: Full-screen hero banner for Cairo Book Shop

Theme: Cairo Book Shop (Giza) | Level 2 | Files: index.html, styles.css

Brief

Build a hero section that fills most of the screen with a background photo, a dark overlay for contrast, centred text and a button.

Learning goals

- Layer a gradient overlay over a background image
- Size with viewport units
- Scale headings fluidly with clamp()

Elements and CSS used

HTML elements	CSS features
header, div, h1, p, a, main, h2	background shorthand, linear-gradient, background-size: cover, min-height: 80vh, place-items, clamp(), text-shadow

Build guide

1. Save a wide photo as images/hero.jpg.
2. Write the header with a .content block.
3. Set min-height: 80vh and centre with grid/place-items.
4. Set the background with a linear-gradient overlay first, then the image.
5. Use clamp() for the h1 size.
6. Check text contrast; darken the overlay if needed.

Project 251: index.html

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1">
  <title>Cairo Book Shop</title>
  <link rel="stylesheet" href="styles.css">
</head>
<body>
  <header class="hero">
    <div class="content">
      <h1>Cairo Book Shop</h1>
      <p>PDF and printed books about web development.</p>
      <a class="btn" href="#more">Learn more</a>
    </div>
  </header>
  <main id="more">
    <h2>Why choose us</h2>
    <p>Founded in Giza by Mohamed Khattab, we offer books that people
come back for.</p>
  </main>
</body>
</html>
```

Project 251: styles.css

```
*, *::before, *::after { box-sizing: border-box; }
:root { --brand: #b90000; --accent: #f4f1ea; --ink: #1b2431; --muted:
#5b6472; --line: #d9d9d9; }
body { margin: 0; font-family: system-ui, Arial, sans-serif; line-
height: 1.6; color: var(--ink); }
.hero {
  min-height: 80vh; display: grid; place-items: center; text-align:
center; color: #fff; padding: 2rem 1rem;
  background: linear-gradient(rgb(0 0 0 / 45%), rgb(0 0 0 / 45%)),
url("images/hero.jpg") center / cover no-repeat;
}
.hero h1 { font-size: clamp(2.2rem, 6vw, 4rem); margin: 0; text-
shadow: 0 2px 8px rgb(0 0 0 / 40%); }
.hero p { font-size: 1.25rem; }
.btn { display: inline-block; padding: .8rem 1.6rem; background: var(-
-brand); color: #fff; border-radius: 999px; text-decoration: none; }
main { max-width: 50rem; margin: 0 auto; padding: 3rem 1rem; }
```

Project 251 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Cairo Book Shop</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<header class="hero">	Introductory content: logo, title, navigation.
	Generic block container for grouping and layout.
Cairo Book Shop	The main heading; only one per page.
PDF and printed books about web development.	A paragraph of text.
Learn more	A link styled as a button; it navigates, so it is a link and not a <button>.
<main id="more">	The unique content of this page; exactly one per page.
Why choose us	Second-level heading for a section.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #b90000;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
min-height: 80vh; display: grid; place-items: center; text-align: c...	Space inside the element between its border and content.
background: linear-gradient(rgb(0 0 0 / 45%), rgb(0 0 0 / 45%)), ur...	A gradient (here often used as a translucent overlay over an image).
font-size: clamp(2.2rem, 6vw, 4rem);	A fluid value between a minimum and a maximum, based on the middle expression.
text-shadow: 0 2px 8px rgb(0 0 0 / 40%);	Shadow behind text to improve contrast over images.
font-size: 1.25rem;	Size of the text.
display: inline-block;	Flows in text but accepts width, height and vertical padding.
background: var(--brand);	Background colour or image.

Declaration	What it does
border-radius: 999px;	Fully rounded pill shape.
text-decoration: none;	Removes the underline from links.
max-width: 50rem;	Limits how wide the element can grow, keeping lines readable.
margin: 0 auto;	Centres a block horizontally: zero top/bottom, automatic left/right.

Check your work

- Text readable over any part of the image
- Image covers without distortion
- Heading scales between phone and desktop
- Button reachable by keyboard

Exercises

1. Add a second button with an outline style.
2. Add a scroll-down arrow animated with @keyframes.
3. Use <picture> in the HTML instead of a CSS background for better loading.

Theme data for this project

Field	Value
Business	Cairo Book Shop
Tagline	PDF and printed books about web development
City	Giza
Owner	Mohamed Khattab
Brand colour	#b90000
Accent colour	#f4f1ea

Field	Value
Offers	Learn HTML (120 EGP); CSS in Practice (150 EGP); JavaScript Basics (180 EGP); Web Accessibility (95 EGP)

Project 252: Full-screen hero banner for Nile Bakery

Theme: Nile Bakery (Cairo) | Level 2 | Files: index.html, styles.css

Brief

Build a hero section that fills most of the screen with a background photo, a dark overlay for contrast, centred text and a button.

Learning goals

- Layer a gradient overlay over a background image
- Size with viewport units
- Scale headings fluidly with clamp()

Elements and CSS used

HTML elements	CSS features

Project 254 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Delta Dental Clinic</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<header class="hero">	Introductory content: logo, title, navigation.
	Generic block container for grouping and layout.
Delta Dental Clinic	The main heading; only one per page.
Gentle care for the whole family.	A paragraph of text.
Learn more	A link styled as a button; it navigates, so it is a link and not a <button>.
<main id="more">	The unique content of this page; exactly one per page.
Why choose us	Second-level heading for a section.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #1d4ed8;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
min-height: 80vh; display: grid; place-items: center; text-align: c...	Space inside the element between its border and content.
background: linear-gradient(rgb(0 0 0 / 45%), rgb(0 0 0 / 45%)), ur...	A gradient (here often used as a translucent overlay over an image).
font-size: clamp(2.2rem, 6vw, 4rem);	A fluid value between a minimum and a maximum, based on the middle expression.
text-shadow: 0 2px 8px rgb(0 0 0 / 40%);	Shadow behind text to improve contrast over images.
font-size: 1.25rem;	Size of the text.
display: inline-block;	Flows in text but accepts width, height and vertical padding.
background: var(--brand);	Background colour or image.

Declaration	What it does
border-radius: 999px;	Fully rounded pill shape.
text-decoration: none;	Removes the underline from links.
max-width: 50rem;	Limits how wide the element can grow, keeping lines readable.
margin: 0 auto;	Centres a block horizontally: zero top/bottom, automatic left/right.

Check your work

- Text readable over any part of the image
- Image covers without distortion
- Heading scales between phone and desktop
- Button reachable by keyboard

Exercises

1. Add a second button with an outline style.
2. Add a scroll-down arrow animated with @keyframes.
3. Use <picture> in the HTML instead of a CSS background for better loading.

Theme data for this project

Field	Value
Business	Delta Dental Clinic
Tagline	Gentle care for the whole family
City	Mansoura
Owner	Dr. Hana Youssef
Brand colour	#1d4ed8
Accent colour	#eff6ff

Field	Value
Offers	Check-up (300 EGP); Whitening (1500 EGP); Filling (600 EGP); Braces consultation (Free)

Project 255: Full-screen hero banner for Red Sea Travel

Theme: Red Sea Travel (Hurghada) | Level 2 | Files: index.html, styles.css

Brief

Build a hero section that fills most of the screen with a background photo, a dark overlay for contrast, centred text and a button.

Learning goals

- Layer a gradient overlay over a background image
- Size with viewport units
- Scale headings fluidly with clamp()

Elements and CSS used

HTML elements	CSS features
header, div, h1, p, a, main, h2	background shorthand, linear-gradient, background-size: cover, min-height: 80vh, place-items, clamp(), text-shadow

Build guide

1. Save a wide photo as images/hero.jpg.
2. Write the header with a .content block.
3. Set min-height: 80vh and centre with grid/place-items.
4. Set the background with a linear-gradient overlay first, then the image.
5. Use clamp() for the h1 size.
6. Check text contrast; darken the overlay if needed.

Project 255: index.html

```
<!DOCTYPE html>

.hero h1 { font-size: clamp(2.2rem, 6vw, 4rem); margin: 0; text-
shadow: 0 2px 8px rgb(0 0 0 / 40%); }
.hero p { font-size: 1.25rem; }
.btn { display: inline-block; padding: .8rem 1.6rem; background: var(-
-brand); color: #fff; border-radius: 999px; text-decoration: none; }
main { max-width: 50rem; margin: 0 auto; padding: 3rem 1rem; }
```

Project 258 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Sinai Trekking Club</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<header class="hero">	Introductory content: logo, title, navigation.
	Generic block container for grouping and layout.
Sinai Trekking Club	The main heading; only one per page.
Guided mountain walks for every level.	A paragraph of text.
Learn more	A link styled as a button; it navigates, so it is a link and not a <button>.
<main id="more">	The unique content of this page; exactly one per page.
Why choose us	Second-level heading for a section.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #92400e;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
min-height: 80vh; display: grid; place-items: center; text-align: c...	Space inside the element between its border and content.
background: linear-gradient(rgb(0 0 0 / 45%), rgb(0 0 0 / 45%)), ur...	A gradient (here often used as a translucent overlay over an image).
font-size: clamp(2.2rem, 6vw, 4rem);	A fluid value between a minimum and a maximum, based on the middle expression.
text-shadow: 0 2px 8px rgb(0 0 0 / 40%);	Shadow behind text to improve contrast over images.
font-size: 1.25rem;	Size of the text.
display: inline-block;	Flows in text but accepts width, height and vertical padding.
background: var(--brand);	Background colour or image.

Declaration	What it does
border-radius: 999px;	Fully rounded pill shape.
text-decoration: none;	Removes the underline from links.
max-width: 50rem;	Limits how wide the element can grow, keeping lines readable.
margin: 0 auto;	Centres a block horizontally: zero top/bottom, automatic left/right.

Check your work

- Text readable over any part of the image
- Image covers without distortion
- Heading scales between phone and desktop
- Button reachable by keyboard

Exercises

1. Add a second button with an outline style.
2. Add a scroll-down arrow animated with @keyframes.
3. Use <picture> in the HTML instead of a CSS background for better loading.

Theme data for this project

Field	Value
Business	Sinai Trekking Club
Tagline	Guided mountain walks for every level
City	Saint Catherine
Owner	Yara Hamdy
Brand colour	#92400e
Accent colour	#fffbeb

Field	Value
Offers	Mount Sinai sunrise (400 EGP); Blue Desert loop (250 EGP); Wadi Gnai (300 EGP); Three-day traverse (1900 EGP)

Project 259: Full-screen hero banner for Horizon Photography

Theme: Horizon Photography (Maadi) | Level 2 | Files: index.html, styles.css

Brief

Build a hero section that fills most of the screen with a background photo, a dark overlay for contrast, centred text and a button.

Learning goals

- Layer a gradient overlay over a background image
- Size with viewport units
- Scale headings fluidly with clamp()

Elements and CSS used

HTML elements	CSS features
header, div, h1, p, a, main, h2	background shorthand, linear-gradient, background-size: cover, min-height: 80vh, place-items, clamp(), text-shadow

Build guide

1. Save a wide photo as images/hero.jpg.
2. Write the header with a .content block.
3. Set min-height: 80vh and centre with grid/place-items.
4. Set the background with a linear-gradient overlay first, then the image.
5. Use clamp() for the h1 size.

6. Check text contrast; darken the overlay if needed.

<title>Cedar Furniture</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<header class="hero">	Introductory content: logo, title, navigation.
	Generic block container for grouping and layout.
Cedar Furniture	The main heading; only one per page.
Solid wood furniture made to order.	A paragraph of text.
Learn more	A link styled as a button; it navigates, so it is a link and not a <button>.
<main id="more">	The unique content of this page; exactly one per page.
Why choose us	Second-level heading for a section.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #78350f;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
min-height: 80vh; display: grid; place-items: center; text-align: c...	Space inside the element between its border and content.
background: linear-gradient(rgb(0 0 0 / 45%), rgb(0 0 0 / 45%)), ur...	A gradient (here often used as a translucent overlay over an image).
font-size: clamp(2.2rem, 6vw, 4rem);	A fluid value between a minimum and a maximum, based on the middle expression.
text-shadow: 0 2px 8px rgb(0 0 0 / 40%);	Shadow behind text to improve contrast over images.
font-size: 1.25rem;	Size of the text.
display: inline-block;	Flows in text but accepts width, height and vertical padding.
background: var(--brand);	Background colour or image.

Declaration	What it does
border-radius: 999px;	Fully rounded pill shape.
text-decoration: none;	Removes the underline from links.
max-width: 50rem;	Limits how wide the element can grow, keeping lines readable.
margin: 0 auto;	Centres a block horizontally: zero top/bottom, automatic left/right.

Check your work

- Text readable over any part of the image
- Image covers without distortion
- Heading scales between phone and desktop
- Button reachable by keyboard

Exercises

1. Add a second button with an outline style.
2. Add a scroll-down arrow animated with @keyframes.
3. Use <picture> in the HTML instead of a CSS background for better loading.

Theme data for this project

Field	Value
Business	Cedar Furniture
Tagline	Solid wood furniture made to order
City	Damietta
Owner	Tarek Lotfy
Brand colour	#78350f
Accent colour	#fef3c7

Field	Value
Offers	Oak dining table (9500 EGP); Bookshelf (4200 EGP); Bedside table (1500 EGP); Coffee table (2800 EGP)

Project 263: Full-screen hero banner for Byte Repair

Theme: Byte Repair (Nasr City) | Level 2 | Files: index.html, styles.css

Brief

Build a hero section that fills most of the screen with a background photo, a dark overlay for contrast, centred text and a button.

Learning goals

- Layer a gradient overlay over a background image
- Size with viewport units
- Scale headings fluidly with clamp()

Elements and CSS used

HTML elements	CSS features
header, div, h1, p, a, main, h2	background shorthand, linear-gradient, background-size: cover, min-height: 80vh, place-items, clamp(), text-shadow

Build guide

1. Save a wide photo as images/hero.jpg.
2. Write the header with a .content block.
3. Set min-height: 80vh and centre with grid/place-items.
4. Set the background with a linear-gradient overlay first, then the image.
5. Use clamp() for the h1 size.
6. Check text contrast; darken the overlay if needed.

Project 263: index.html

```
<!DOCTYPE html>
<html lang="en">

margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
min-height: 80vh; display: grid; place-items: center; text-align: c...	Space inside the element between its border and content.
background: linear-gradient(rgb(0 0 0 / 45%), rgb(0 0 0 / 45%)), ur...	A gradient (here often used as a translucent overlay over an image).
font-size: clamp(2.2rem, 6vw, 4rem);	A fluid value between a minimum and a maximum, based on the middle expression.
text-shadow: 0 2px 8px rgb(0 0 0 / 40%);	Shadow behind text to improve contrast over images.
font-size: 1.25rem;	Size of the text.
display: inline-block;	Flows in text but accepts width, height and vertical padding.
background: var(--brand);	Background colour or image.

Declaration	What it does
border-radius: 999px;	Fully rounded pill shape.
text-decoration: none;	Removes the underline from links.
max-width: 50rem;	Limits how wide the element can grow, keeping lines readable.
margin: 0 auto;	Centres a block horizontally: zero top/bottom, automatic left/right.

Check your work

- Text readable over any part of the image
- Image covers without distortion
- Heading scales between phone and desktop
- Button reachable by keyboard

Exercises

1. Add a second button with an outline style.
2. Add a scroll-down arrow animated with @keyframes.
3. Use <picture> in the HTML instead of a CSS background for better loading.

Theme data for this project

Field	Value
Business	Habiba Handmade Jewellery
Tagline	Silver and brass pieces inspired by Nubia
City	Aswan
Owner	Habiba Saleh
Brand colour	#a16207
Accent colour	#fefce8

Field	Value
Offers	Lotus pendant (650 EGP); Brass cuff (420 EGP); Bead earrings (180 EGP); Ankh ring (300 EGP)

Project 267: Full-screen hero banner for Fayoum Pottery Studio

Theme: Fayoum Pottery Studio (Tunis Village) | Level 2 | Files: index.html, styles.css

Brief

Build a hero section that fills most of the screen with a background photo, a dark overlay for contrast, centred text and a button.

Learning goals

- Layer a gradient overlay over a background image
- Size with viewport units
- Scale headings fluidly with clamp()

Elements and CSS used

HTML elements	CSS features
header, div, h1, p, a, main, h2	background shorthand, linear-gradient, background-size: cover, min-height: 80vh, place-items, clamp(), text-shadow

Build guide

1. Save a wide photo as images/hero.jpg.
2. Write the header with a .content block.
3. Set min-height: 80vh and centre with grid/place-items.
4. Set the background with a linear-gradient overlay first, then the image.
5. Use clamp() for the h1 size.

6. Check text contrast; darken the overlay if needed.

Project 267: index.html

```
<!DOCTYPE html>
<html lang="en">

margin: 0 auto;	Centres a block horizontally: zero top/bottom, automatic left/right.

Check your work

- Text readable over any part of the image
- Image covers without distortion
- Heading scales between phone and desktop
- Button reachable by keyboard

Exercises

1. Add a second button with an outline style.
2. Add a scroll-down arrow animated with @keyframes.
3. Use <picture> in the HTML instead of a CSS background for better loading.

Theme data for this project

Field	Value
Business	Luxor Music Academy
Tagline	Oud, piano, guitar and voice lessons
City	Luxor
Owner	Salma Ragab
Brand colour	#4c1d95
Accent colour	#f5f3ff

Field	Value
Offers	Oud for beginners (1600 EGP); Piano grade 1 (1800 EGP); Guitar chords (1400 EGP); Voice coaching (1500 EGP)

Project 271: Full-screen hero banner for Port Said Seafood

Theme: Port Said Seafood (Port Said) | Level 2 | Files: index.html, styles.css

Brief

Build a hero section that fills most of the screen with a background photo, a dark overlay for contrast, centred text and a button.

Learning goals

- Layer a gradient overlay over a background image
- Size with viewport units
- Scale headings fluidly with clamp()

Elements and CSS used

HTML elements	CSS features
header, div, h1, p, a, main, h2	background shorthand, linear-gradient, background-size: cover, min-height: 80vh, place-items, clamp(), text-shadow

Build guide

1. Save a wide photo as images/hero.jpg.
2. Write the header with a .content block.
3. Set min-height: 80vh and centre with grid/place-items.
4. Set the background with a linear-gradient overlay first, then the image.
5. Use clamp() for the h1 size.
6. Check text contrast; darken the overlay if needed.

Project 271: index.html

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1">
  <title>Port Said Seafood</title>
  <link rel="stylesheet" href="styles.css">
</head>
<body>
  <header class="hero">
    <div class="content">
      <h1>Port Said Seafood</h1>
      <p>Grilled fish straight from the boats.</p>
      <a class="btn" href="#more">Learn more</a>
    </div>
  </header>
  <main id="more">
    <h2>Why choose us</h2>
    <p>Founded in Port Said by Sherif Wahba, we offer dishes that
people come back for.</p>
  </main>
</body>
</html>
```

Project 271: styles.css

```
*, *::before, *::after { box-sizing: border-box; }
:root { --brand: #0e7490; --accent: #ecfeff; --ink: #1b2431; --muted:

}
.hero h1 { font-size: clamp(2.2rem, 6vw, 4rem); margin: 0; text-
shadow: 0 2px 8px rgb(0 0 0 / 40%); }
.hero p { font-size: 1.25rem; }
.btn { display: inline-block; padding: .8rem 1.6rem; background: var(-
-brand); color: #fff; border-radius: 999px; text-decoration: none; }
main { max-width: 50rem; margin: 0 auto; padding: 3rem 1rem; }
```

Project 271 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Port Said Seafood</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<header class="hero">	Introductory content: logo, title, navigation.
	Generic block container for grouping and layout.
Port Said Seafood	The main heading; only one per page.
Grilled fish straight from the boats.	A paragraph of text.
Learn more	A link styled as a button; it navigates, so it is a link and not a <button>.
<main id="more">	The unique content of this page; exactly one per page.
Why choose us	Second-level heading for a section.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #0e7490;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
min-height: 80vh; display: grid; place-items: center; text-align: c...	Space inside the element between its border and content.
background: linear-gradient(rgb(0 0 0 / 45%), rgb(0 0 0 / 45%)), ur...	A gradient (here often used as a translucent overlay over an image).
font-size: clamp(2.2rem, 6vw, 4rem);	A fluid value between a minimum and a maximum, based on the middle expression.
text-shadow: 0 2px 8px rgb(0 0 0 / 40%);	Shadow behind text to improve contrast over images.
font-size: 1.25rem;	Size of the text.
display: inline-block;	Flows in text but accepts width, height and vertical padding.
background: var(--brand);	Background colour or image.

Declaration	What it does
border-radius: 999px;	Fully rounded pill shape.
text-decoration: none;	Removes the underline from links.
max-width: 50rem;	Limits how wide the element can grow, keeping lines readable.
margin: 0 auto;	Centres a block horizontally: zero top/bottom, automatic left/right.

Check your work

- Text readable over any part of the image
- Image covers without distortion
- Heading scales between phone and desktop
- Button reachable by keyboard

Exercises

1. Add a second button with an outline style.
2. Add a scroll-down arrow animated with @keyframes.
3. Use <picture> in the HTML instead of a CSS background for better loading.

Theme data for this project

Field	Value
Business	Port Said Seafood
Tagline	Grilled fish straight from the boats
City	Port Said
Owner	Sherif Wahba
Brand colour	#0e7490
Accent colour	#ecfeff

Field	Value
Offers	Grilled sea bass (320 EGP); Shrimp tagine (280 EGP); Calamari (190 EGP); Fish soup (120 EGP)

Elements and CSS used

HTML elements	CSS features
header, div, h1, p, a, main, h2	background shorthand, linear-gradient, background-size: cover, min-height: 80vh, place-items, clamp(), text-shadow

Build guide

1. Save a wide photo as images/hero.jpg.
2. Write the header with a .content block.
3. Set min-height: 80vh and centre with grid/place-items.
4. Set the background with a linear-gradient overlay first, then the image.
5. Use clamp() for the h1 size.
6. Check text contrast; darken the overlay if needed.

Project 275 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Minya Coding Club</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<header class="hero">	Introductory content: logo, title, navigation.
	Generic block container for grouping and layout.
Minya Coding Club	The main heading; only one per page.
Free weekend coding for teenagers.	A paragraph of text.
Learn more	A link styled as a button; it navigates, so it is a link and not a <button>.
<main id="more">	The unique content of this page; exactly one per page.
Why choose us	Second-level heading for a section.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #2563eb;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
min-height: 80vh; display: grid; place-items: center; text-align: c...	Space inside the element between its border and content.
background: linear-gradient(rgb(0 0 0 / 45%), rgb(0 0 0 / 45%)), ur...	A gradient (here often used as a translucent overlay over an image).
font-size: clamp(2.2rem, 6vw, 4rem);	A fluid value between a minimum and a maximum, based on the middle expression.
text-shadow: 0 2px 8px rgb(0 0 0 / 40%);	Shadow behind text to improve contrast over images.
font-size: 1.25rem;	Size of the text.
display: inline-block;	Flows in text but accepts width, height and vertical padding.
background: var(--brand);	Background colour or image.

Declaration	What it does
border-radius: 999px;	Fully rounded pill shape.
text-decoration: none;	Removes the underline from links.
max-width: 50rem;	Limits how wide the element can grow, keeping lines readable.
margin: 0 auto;	Centres a block horizontally: zero top/bottom, automatic left/right.

Check your work

- Text readable over any part of the image
- Image covers without distortion
- Heading scales between phone and desktop
- Button reachable by keyboard

Exercises

1. Add a second button with an outline style.
2. Add a scroll-down arrow animated with @keyframes.
3. Use <picture> in the HTML instead of a CSS background for better loading.

Theme data for this project

Field	Value
Business	Minya Coding Club
Tagline	Free weekend coding for teenagers
City	Minya
Owner	Youssef Hany
Brand colour	#2563eb
Accent colour	#eff6ff

Offers	HTML weekend (Free); CSS art (Free); Scratch games (Free); Hackathon (Free)

Project type: Team page

Level 1 | 25 projects, one per theme

Show four team members with circular photos, names and roles in a centred responsive grid.

Project 276: Team page for Cairo Book Shop

Theme: Cairo Book Shop (Giza) | Level 1 | Files: index.html, styles.css

Brief

Show four team members with circular photos, names and roles in a centred responsive grid.

Learning goals

- Make circular avatars with border-radius: 50% and object-fit
- Use decorative empty alt when the name is next to the photo
- Centre text in a grid

Elements and CSS used

HTML elements	CSS features
ul, li, img, h2, p	border-radius: 50%, object-fit: cover, border, text-align: center, grid

Build guide

1. Write a <ul class="team"> with one <li> per person.
2. Add square photos with alt="" (the name follows as text).
3. Add h2 for the name and p for the role.
4. Grid the list with auto-fit.
5. Make the images 9rem circles with object-fit: cover.
6. Add a coloured ring with border.

Project 276: index.html

```
<!DOCTYPE html>

<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
Meet the team	The main heading; only one per page.
<ul class="team">	Unordered (bulleted) list.
<li class="member"><img src="images/person-1.jpg" alt="" width="200...	Second-level heading for a section.
<li class="member"><img src="images/person-2.jpg" alt="" width="200...	A paragraph of text.
<li class="member"><img src="images/person-3.jpg" alt="" width="200...	One list item.

Line	What it does
<li class="member"><img src="images/person-4.jpg" alt="" width="200...	An image; alt describes it, width and height reserve space before it loads.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #b90000;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 60rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
text-align: center;	Centres inline content such as text.
list-style: none;	Removes bullets or numbers from a list.
display: grid;	Turns the element into a grid container.

Declaration	What it does
gap: 1.5rem;	Space between grid or flex items without extra margins.
grid-template-columns: repeat(auto-fit, minmax(11rem, 1fr));	Defines the columns of the grid.
border-radius: 50%;	Turns a square into a circle.
object-fit: cover;	Crops an image to fill its box while keeping its proportions.
border: 4px solid var(--accent);	Changes the visual order of a flex item without changing the source.
font-size: 1.05rem;	Size of the text.

Check your work

- Photos are perfect circles even if the source is not square
- Names are headings
- Grid wraps
- Alt is empty because the name is visible text

Exercises

1. Add a short bio with <details>.
2. Add social links under each name.
3. Add a hover effect that lifts the card.

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Delta Dental Clinic - Team</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
Meet the team	The main heading; only one per page.
<ul class="team">	Unordered (bulleted) list.
<li class="member"><img src="images/person-1.jpg" alt="" width="200...	Second-level heading for a section.
<li class="member"><img src="images/person-2.jpg" alt="" width="200...	A paragraph of text.
<li class="member"><img src="images/person-3.jpg" alt="" width="200...	One list item.

Line	What it does
<li class="member"><img src="images/person-4.jpg" alt="" width="200...	An image; alt describes it, width and height reserve space before it loads.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #1d4ed8;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 60rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
text-align: center;	Centres inline content such as text.
list-style: none;	Removes bullets or numbers from a list.
display: grid;	Turns the element into a grid container.

Declaration	What it does
gap: 1.5rem;	Space between grid or flex items without extra margins.
grid-template-columns: repeat(auto-fit, minmax(11rem, 1fr));	Defines the columns of the grid.
border-radius: 50%;	Turns a square into a circle.
object-fit: cover;	Crops an image to fill its box while keeping its proportions.
border: 4px solid var(--accent);	Changes the visual order of a flex item without changing the source.
font-size: 1.05rem;	Size of the text.

Check your work

- Photos are perfect circles even if the source is not square
- Names are headings
- Grid wraps
- Alt is empty because the name is visible text

Exercises

1. Add a short bio with <details>.
2. Add social links under each name.
3. Add a hover effect that lifts the card.

Theme data for this project

Field	Value
Business	Delta Dental Clinic
Tagline	Gentle care for the whole family
City	Mansoura
Owner	Dr. Hana Youssef

Field	Value
Brand colour	#1d4ed8
Accent colour	#eff6ff
Offers	Check-up (300 EGP); Whitening (1500 EGP); Filling (600 EGP); Braces consultation (Free)

Project 280: Team page for Red Sea Travel

Theme: Red Sea Travel (Hurghada) | Level 1 | Files: index.html, styles.css

Brief

Show four team members with circular photos, names and roles in a centred responsive grid.

Learning goals

- Make circular avatars with border-radius: 50% and object-fit
- Use decorative empty alt when the name is next to the photo
- Centre text in a grid

Elements and CSS used

HTML elements	CSS features
ul, li, img, h2, p	border-radius: 50%, object-fit: cover, border, text-align: center, grid

Build guide

1. Write a <ul class="team"> with one <li> per person.
2. Add square photos with alt="" (the name follows as text).
3. Add h2 for the name and p for the role.
4. Grid the list with auto-fit.
5. Make the images 9rem circles with object-fit: cover.
6. Add a coloured ring with border.

Project 280: index.html

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Sinai Trekking Club - Team</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
Meet the team	The main heading; only one per page.
<ul class="team">	Unordered (bulleted) list.
<li class="member"><img src="images/person-1.jpg" alt="" width="200...	Second-level heading for a section.
<li class="member"><img src="images/person-2.jpg" alt="" width="200...	A paragraph of text.
<li class="member"><img src="images/person-3.jpg" alt="" width="200...	One list item.

Line	What it does
<li class="member"><img src="images/person-4.jpg" alt="" width="200...	An image; alt describes it, width and height reserve space before it loads.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #92400e;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 60rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
text-align: center;	Centres inline content such as text.
list-style: none;	Removes bullets or numbers from a list.
display: grid;	Turns the element into a grid container.

Declaration	What it does
gap: 1.5rem;	Space between grid or flex items without extra margins.
grid-template-columns: repeat(auto-fit, minmax(11rem, 1fr));	Defines the columns of the grid.
border-radius: 50%;	Turns a square into a circle.
object-fit: cover;	Crops an image to fill its box while keeping its proportions.
border: 4px solid var(--accent);	Changes the visual order of a flex item without changing the source.
font-size: 1.05rem;	Size of the text.

Check your work

- Photos are perfect circles even if the source is not square
- Names are headings
- Grid wraps
- Alt is empty because the name is visible text

Exercises

1. Add a short bio with <details>.
2. Add social links under each name.
3. Add a hover effect that lifts the card.

Theme data for this project

Field	Value
Business	Sinai Trekking Club
Tagline	Guided mountain walks for every level
City	Saint Catherine
Owner	Yara Hamdy

Field	Value
Brand colour	#92400e
Accent colour	#fffbeb
Offers	Mount Sinai sunrise (400 EGP); Blue Desert loop (250 EGP); Wadi Gnai (300 EGP); Three-day traverse (1900 EGP)

Project 284: Team page for Horizon Photography

Theme: Horizon Photography (Maadi) | Level 1 | Files: index.html, styles.css

Brief

Show four team members with circular photos, names and roles in a centred responsive grid.

Learning goals

- Make circular avatars with border-radius: 50% and object-fit
- Use decorative empty alt when the name is next to the photo
- Centre text in a grid

Elements and CSS used

HTML elements	CSS features
ul, li, img, h2, p	border-radius: 50%, object-fit: cover, border, text-align: center, grid

Build guide

1. Write a <ul class="team"> with one <li> per person.
2. Add square photos with alt="" (the name follows as text).
3. Add h2 for the name and p for the role.
4. Grid the list with auto-fit.
5. Make the images 9rem circles with object-fit: cover.
6. Add a coloured ring with border.

Project 284: index.html

Project 287 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Cedar Furniture - Team</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
Meet the team	The main heading; only one per page.
<ul class="team">	Unordered (bulleted) list.
<li class="member"><img src="images/person-1.jpg" alt="" width="200...	Second-level heading for a section.
<li class="member"><img src="images/person-2.jpg" alt="" width="200...	A paragraph of text.
<li class="member"><img src="images/person-3.jpg" alt="" width="200...	One list item.

Line	What it does
<li class="member"><img src="images/person-4.jpg" alt="" width="200...	An image; alt describes it, width and height reserve space before it loads.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #78350f;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 60rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
text-align: center;	Centres inline content such as text.
list-style: none;	Removes bullets or numbers from a list.
display: grid;	Turns the element into a grid container.

Declaration	What it does
gap: 1.5rem;	Space between grid or flex items without extra margins.
grid-template-columns: repeat(auto-fit, minmax(11rem, 1fr));	Defines the columns of the grid.
border-radius: 50%;	Turns a square into a circle.
object-fit: cover;	Crops an image to fill its box while keeping its proportions.
border: 4px solid var(--accent);	Changes the visual order of a flex item without changing the source.
font-size: 1.05rem;	Size of the text.

Check your work

- Photos are perfect circles even if the source is not square
- Names are headings
- Grid wraps
- Alt is empty because the name is visible text

Exercises

1. Add a short bio with <details>.
2. Add social links under each name.
3. Add a hover effect that lifts the card.

Theme data for this project

Field	Value
Business	Cedar Furniture
Tagline	Solid wood furniture made to order
City	Damietta
Owner	Tarek Lotfy

Field	Value
Brand colour	#78350f
Accent colour	#fef3c7
Offers	Oak dining table (9500 EGP); Bookshelf (4200 EGP); Bedside table (1500 EGP); Coffee table (2800 EGP)

Project 288: Team page for Byte Repair

Theme: Byte Repair (Nasr City) | Level 1 | Files: index.html, styles.css

Brief

Show four team members with circular photos, names and roles in a centred responsive grid.

Learning goals

- Make circular avatars with border-radius: 50% and object-fit
- Use decorative empty alt when the name is next to the photo
- Centre text in a grid

Elements and CSS used

HTML elements	CSS features
ul, li, img, h2, p	border-radius: 50%, object-fit: cover, border, text-align: center, grid

Build guide

1. Write a <ul class="team"> with one <li> per person.
2. Add square photos with alt="" (the name follows as text).
3. Add h2 for the name and p for the role.
4. Grid the list with auto-fit.
5. Make the images 9rem circles with object-fit: cover.
6. Add a coloured ring with border.

Project 288: index.html

<main>	The unique content of this page; exactly one per page.
Meet the team	The main heading; only one per page.
<ul class="team">	Unordered (bulleted) list.
<li class="member"><img src="images/person-1.jpg" alt="" width="200...	Second-level heading for a section.
<li class="member"><img src="images/person-2.jpg" alt="" width="200...	A paragraph of text.
<li class="member"><img src="images/person-3.jpg" alt="" width="200...	One list item.

Line	What it does
<li class="member"><img src="images/person-4.jpg" alt="" width="200...	An image; alt describes it, width and height reserve space before it loads.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #a16207;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 60rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
text-align: center;	Centres inline content such as text.
list-style: none;	Removes bullets or numbers from a list.
display: grid;	Turns the element into a grid container.

Declaration	What it does
gap: 1.5rem;	Space between grid or flex items without extra margins.
grid-template-columns: repeat(auto-fit, minmax(11rem, 1fr));	Defines the columns of the grid.
border-radius: 50%;	Turns a square into a circle.
object-fit: cover;	Crops an image to fill its box while keeping its proportions.
border: 4px solid var(--accent);	Changes the visual order of a flex item without changing the source.
font-size: 1.05rem;	Size of the text.

Check your work

- Photos are perfect circles even if the source is not square
- Names are headings
- Grid wraps
- Alt is empty because the name is visible text

Exercises

1. Add a short bio with <details>.
2. Add social links under each name.
3. Add a hover effect that lifts the card.

Theme data for this project

Field	Value
Business	Habiba Handmade Jewellery
Tagline	Silver and brass pieces inspired by Nubia
City	Aswan
Owner	Habiba Saleh

Field	Value
Brand colour	#a16207
Accent colour	#fefce8
Offers	Lotus pendant (650 EGP); Brass cuff (420 EGP); Bead earrings (180 EGP); Ankh ring (300 EGP)

Project 292: Team page for Fayoum Pottery Studio

Theme: Fayoum Pottery Studio (Tunis Village) | Level 1 | Files: index.html, styles.css

Brief

Show four team members with circular photos, names and roles in a centred responsive grid.

Learning goals

- Make circular avatars with border-radius: 50% and object-fit
- Use decorative empty alt when the name is next to the photo
- Centre text in a grid

Elements and CSS used

HTML elements	CSS features
ul, li, img, h2, p	border-radius: 50%, object-fit: cover, border, text-align: center, grid

Build guide

1. Write a <ul class="team"> with one <li> per person.
2. Add square photos with alt="" (the name follows as text).
3. Add h2 for the name and p for the role.
4. Grid the list with auto-fit.
5. Make the images 9rem circles with object-fit: cover.
6. Add a coloured ring with border.

Project 292: index.html

<li class="member"><img src="images/person-4.jpg" alt="" width="200...	An image; alt describes it, width and height reserve space before it loads.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #4c1d95;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 60rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
text-align: center;	Centres inline content such as text.
list-style: none;	Removes bullets or numbers from a list.
display: grid;	Turns the element into a grid container.

Declaration	What it does
gap: 1.5rem;	Space between grid or flex items without extra margins.
grid-template-columns: repeat(auto-fit, minmax(11rem, 1fr));	Defines the columns of the grid.
border-radius: 50%;	Turns a square into a circle.
object-fit: cover;	Crops an image to fill its box while keeping its proportions.
border: 4px solid var(--accent);	Changes the visual order of a flex item without changing the source.
font-size: 1.05rem;	Size of the text.

Check your work

- Photos are perfect circles even if the source is not square
- Names are headings
- Grid wraps
- Alt is empty because the name is visible text

Exercises

1. Add a short bio with <details>.
2. Add social links under each name.
3. Add a hover effect that lifts the card.

Theme data for this project

Field	Value
Business	Luxor Music Academy
Tagline	Oud, piano, guitar and voice lessons
City	Luxor
Owner	Salma Ragab

Field	Value
Brand colour	#4c1d95
Accent colour	#f5f3ff
Offers	Oud for beginners (1600 EGP); Piano grade 1 (1800 EGP); Guitar chords (1400 EGP); Voice coaching (1500 EGP)

Project 296: Team page for Port Said Seafood

Theme: Port Said Seafood (Port Said) | Level 1 | Files: index.html, styles.css

Brief

Show four team members with circular photos, names and roles in a centred responsive grid.

Learning goals

- Make circular avatars with border-radius: 50% and object-fit
- Use decorative empty alt when the name is next to the photo
- Centre text in a grid

Elements and CSS used

HTML elements	CSS features
ul, li, img, h2, p	border-radius: 50%, object-fit: cover, border, text-align: center, grid

Build guide

1. Write a <ul class="team"> with one <li> per person.
2. Add square photos with alt="" (the name follows as text).
3. Add h2 for the name and p for the role.
4. Grid the list with auto-fit.
5. Make the images 9rem circles with object-fit: cover.
6. Add a coloured ring with border.

Project 296: index.html

```
<!DOCTYPE html>
<html lang="en">

margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 60rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
text-align: center;	Centres inline content such as text.
list-style: none;	Removes bullets or numbers from a list.
display: grid;	Turns the element into a grid container.

Declaration	What it does
gap: 1.5rem;	Space between grid or flex items without extra margins.
grid-template-columns: repeat(auto-fit, minmax(11rem, 1fr));	Defines the columns of the grid.
border-radius: 50%;	Turns a square into a circle.
object-fit: cover;	Crops an image to fill its box while keeping its proportions.
border: 4px solid var(--accent);	Changes the visual order of a flex item without changing the source.
font-size: 1.05rem;	Size of the text.

Check your work

- Photos are perfect circles even if the source is not square
- Names are headings
- Grid wraps
- Alt is empty because the name is visible text

Exercises

1. Add a short bio with <details>.
2. Add social links under each name.
3. Add a hover effect that lifts the card.

Theme data for this project

Field	Value
Business	Ismailia Cycling Store
Tagline	Bikes, parts and Friday group rides
City	Ismailia
Owner	Bassem Adly

Field	Value
Brand colour	#dc2626
Accent colour	#fef2f2
Offers	City bike (6500 EGP); Mountain bike (11000 EGP); Kids bike (3200 EGP); Tune-up (250 EGP)

Project 300: Team page for Minya Coding Club

Theme: Minya Coding Club (Minya) | Level 1 | Files: index.html, styles.css

Brief

Show four team members with circular photos, names and roles in a centred responsive grid.

Learning goals

- Make circular avatars with border-radius: 50% and object-fit
- Use decorative empty alt when the name is next to the photo
- Centre text in a grid

Elements and CSS used

HTML elements	CSS features
ul, li, img, h2, p	border-radius: 50%, object-fit: cover, border, text-align: center, grid

Build guide

1. Write a <ul class="team"> with one <li> per person.
2. Add square photos with alt="" (the name follows as text).
3. Add h2 for the name and p for the role.
4. Grid the list with auto-fit.
5. Make the images 9rem circles with object-fit: cover.
6. Add a coloured ring with border.

Project 300: index.html

Offers	HTML weekend (Free); CSS art (Free); Scratch games (Free); Hackathon (Free)

Project type: Testimonials section

Level 2 | 25 projects, one per theme

Show three customer quotes as cards with a large decorative quotation mark, the customer's name and a star rating.

Project 301: Testimonials section for Cairo Book Shop

Theme: Cairo Book Shop (Giza) | Level 2 | Files: index.html, styles.css

Brief

Show three customer quotes as cards with a large decorative quotation mark, the customer's name and a star rating.

Learning goals

- Mark up quotes correctly with figure, blockquote and figcaption
- Position a decorative ::before
- Label icon-only content with aria-label

Elements and CSS used

HTML elements	CSS features
figure, blockquote, p, figcaption, span	position: relative/absolute, ::before, content, opacity, font-style, grid

Build guide

1. Write one <figure> per review: blockquote with the text, figcaption with the name.
2. Add the stars in a span with an aria-label.
3. Grid the figures.
4. Set figure position: relative.
5. Add the big quotation mark with ::before positioned absolutely.
6. Colour the stars.

Project 301: index.html

Business	Pyramid Fitness
Tagline	Train smarter, feel stronger
City	6th of October
Owner	Omar Farouk
Brand colour	#0f766e
Accent colour	#ecfdf5
Offers	Morning yoga (100 EGP); Strength circuit (120 EGP); Spinning (110 EGP); Personal training (350 EGP)

Project 304: Testimonials section for Delta Dental Clinic

Theme: Delta Dental Clinic (Mansoura) | Level 2 | Files: index.html, styles.css

Brief

Show three customer quotes as cards with a large decorative quotation mark, the customer's name and a star rating.

Learning goals

- Mark up quotes correctly with figure, blockquote and figcaption
- Position a decorative ::before
- Label icon-only content with aria-label

Elements and CSS used

HTML elements	CSS features
figure, blockquote, p, figcaption, span	position: relative/absolute, ::before, content, opacity, font-style, grid

Build guide

1. Write one <figure> per review: blockquote with the text, figcaption with the name.
2. Add the stars in a span with an aria-label.
3. Grid the figures.
4. Set figure position: relative.
5. Add the big quotation mark with ::before positioned absolutely.
6. Colour the stars.

Project 304: index.html

Project 307 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Green Leaf Cafe - Reviews</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
What customers say about Green Leaf Cafe	The main heading; only one per page.
	Generic block container for grouping and layout.
<figure>	Self-contained media with an optional caption.
<blockquote> The best drink experience in Zamalek. </blockquote>	A paragraph of text.
<figcaption>Heba M. <span class="stars" aria-label="5 out of 5 star...	Caption for the figure.

Line	What it does
<blockquote> Friendly staff and fair prices. </blockquote>	A long quotation from another source.
<figcaption>Ziad K. <span class="stars" aria-label="5 out of 5 star...	Generic inline container for styling.
<figcaption>Rania S. <span class="stars" aria-label="5 out of 5 sta...	Accessible name for an element that has no visible text.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #166534;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 60rem;	Limits how wide the element can grow, keeping lines readable.

Declaration	What it does
padding: 0 1rem;	Space inside the element between its border and content.
display: grid;	Turns the element into a grid container.
gap: 1.5rem;	Space between grid or flex items without extra margins.
grid-template-columns: repeat(auto-fit, minmax(16rem, 1fr));	Defines the columns of the grid.
background: var(--accent);	Background colour or image.
border-radius: 14px;	Rounds the corners.
position: relative;	Keeps normal flow but becomes the reference for absolutely positioned children.
content: "\201C";	The text or empty string for a pseudo-element.
position: absolute;	Removes the element from flow and positions it relative to the nearest positioned ancestor.
font-size: 5rem;	Size of the text.
opacity: .25;	Transparency from 0 (invisible) to 1 (solid).
font-weight: 600;	Thickness of the text.

Check your work

- Attribution is outside the blockquote
- Stars have a text alternative
- Quote mark does not overlap text badly
- Cards equal height

Exercises

1. Add photos of the customers.
2. Turn the section into a horizontal scroll-snap carousel.
3. Add schema.org Review microdata.

Theme data for this project

Field	Value
Business	Green Leaf Cafe
Tagline	Specialty coffee and quiet corners
City	Zamalek
Owner	Karim Said
Brand colour	#166534
Accent colour	#f0fdf4
Offers	Flat white (55 EGP); Cold brew (60 EGP); Hibiscus iced tea (40 EGP); Cheesecake (75 EGP)

Project 308: Testimonials section for Sinai Trekking Club

Theme: Sinai Trekking Club (Saint Catherine) | Level 2 | Files: index.html, styles.css

Brief

Show three customer quotes as cards with a large decorative quotation mark, the customer's name and a star rating.

Learning goals

- Mark up quotes correctly with figure, blockquote and figcaption
- Position a decorative ::before
- Label icon-only content with aria-label

Elements and CSS used

HTML elements	CSS features
figure, blockquote, p, figcaption, span	position: relative/absolute, ::before, content, opacity, font-style, grid

Build guide

1. Write one <figure> per review: blockquote with the text, figcaption with the name.
2. Add the stars in a span with an aria-label.
3. Grid the figures.
4. Set figure position: relative.
5. Add the big quotation mark with ::before positioned absolutely.
6. Colour the stars.

Project 308: index.html

Show three customer quotes as cards with a large decorative quotation mark, the customer's name and a star rating.

Learning goals

- Mark up quotes correctly with figure, blockquote and figcaption
- Position a decorative ::before
- Label icon-only content with aria-label

Elements and CSS used

HTML elements	CSS features
figure, blockquote, p, figcaption, span	position: relative/absolute, ::before, content, opacity, font-style, grid

Build guide

1. Write one <figure> per review: blockquote with the text, figcaption with the name.
2. Add the stars in a span with an aria-label.
3. Grid the figures.
4. Set figure position: relative.
5. Add the big quotation mark with ::before positioned absolutely.
6. Colour the stars.

Project 311 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Oasis Plant Nursery - Reviews</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
What customers say about Oasis Plant Nursery	The main heading; only one per page.
	Generic block container for grouping and layout.
<figure>	Self-contained media with an optional caption.
<blockquote> The best plant experience in Sheikh Zayed. </bloc...	A paragraph of text.
<figcaption>Heba M. <span class="stars" aria-label="5 out of 5 star...	Caption for the figure.

Line	What it does
<blockquote> Friendly staff and fair prices. </blockquote>	A long quotation from another source.
<figcaption>Ziad K. <span class="stars" aria-label="5 out of 5 star...	Generic inline container for styling.
<figcaption>Rania S. <span class="stars" aria-label="5 out of 5 sta...	Accessible name for an element that has no visible text.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #15803d;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 60rem;	Limits how wide the element can grow, keeping lines readable.

Declaration	What it does
padding: 0 1rem;	Space inside the element between its border and content.
display: grid;	Turns the element into a grid container.
gap: 1.5rem;	Space between grid or flex items without extra margins.
grid-template-columns: repeat(auto-fit, minmax(16rem, 1fr));	Defines the columns of the grid.
background: var(--accent);	Background colour or image.
border-radius: 14px;	Rounds the corners.
position: relative;	Keeps normal flow but becomes the reference for absolutely positioned children.
content: "\201C";	The text or empty string for a pseudo-element.
position: absolute;	Removes the element from flow and positions it relative to the nearest positioned ancestor.
font-size: 5rem;	Size of the text.
opacity: .25;	Transparency from 0 (invisible) to 1 (solid).
font-weight: 600;	Thickness of the text.

Check your work

- Attribution is outside the blockquote
- Stars have a text alternative
- Quote mark does not overlap text badly
- Cards equal height

Exercises

1. Add photos of the customers.
2. Turn the section into a horizontal scroll-snap carousel.
3. Add schema.org Review microdata.

margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 60rem;	Limits how wide the element can grow, keeping lines readable.

Declaration	What it does
padding: 0 1rem;	Space inside the element between its border and content.
display: grid;	Turns the element into a grid container.
gap: 1.5rem;	Space between grid or flex items without extra margins.
grid-template-columns: repeat(auto-fit, minmax(16rem, 1fr));	Defines the columns of the grid.
background: var(--accent);	Background colour or image.
border-radius: 14px;	Rounds the corners.
position: relative;	Keeps normal flow but becomes the reference for absolutely positioned children.
content: "\201C";	The text or empty string for a pseudo-element.
position: absolute;	Removes the element from flow and positions it relative to the nearest positioned ancestor.
font-size: 5rem;	Size of the text.
opacity: .25;	Transparency from 0 (invisible) to 1 (solid).
font-weight: 600;	Thickness of the text.

Check your work

- Attribution is outside the blockquote
- Stars have a text alternative
- Quote mark does not overlap text badly
- Cards equal height

Exercises

1. Add photos of the customers.
2. Turn the section into a horizontal scroll-snap carousel.
3. Add schema.org Review microdata.

Theme data for this project

Field	Value
Business	Sahara Pet Care
Tagline	Grooming, boarding and vet visits
City	New Cairo
Owner	Rana Ibrahim
Brand colour	#c2410c
Accent colour	#fff7ed
Offers	Full grooming (400 EGP); Day boarding (250 EGP); Vaccination (300 EGP); Dog walking (100 EGP)

Project 315: Testimonials section for Alexandria Sailing School

Theme: Alexandria Sailing School (Alexandria) | Level 2 | Files: index.html, styles.css

Brief

Show three customer quotes as cards with a large decorative quotation mark, the customer's name and a star rating.

Learning goals

- Mark up quotes correctly with figure, blockquote and figcaption
- Position a decorative ::before
- Label icon-only content with aria-label

Elements and CSS used

HTML elements	CSS features
figure, blockquote, p, figcaption, span	position: relative/absolute, ::before, content, opacity, font-style, grid

Build guide

1. Write one <figure> per review: blockquote with the text, figcaption with the name.
2. Add the stars in a span with an aria-label.
3. Grid the figures.
4. Set figure position: relative.
5. Add the big quotation mark with ::before positioned absolutely.

6. Colour the stars.

Project 315: index.html

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Cleopatra Beauty Salon - Reviews</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
What customers say about Cleopatra Beauty Salon	The main heading; only one per page.
	Generic block container for grouping and layout.
<figure>	Self-contained media with an optional caption.
<blockquote> The best treatment experience in Dokki. </blockqu...	A paragraph of text.
<figcaption>Heba M. <span class="stars" aria-label="5 out of 5 star...	Caption for the figure.

Line	What it does
<blockquote> Friendly staff and fair prices. </blockquote>	A long quotation from another source.
<figcaption>Ziad K. <span class="stars" aria-label="5 out of 5 star...	Generic inline container for styling.
<figcaption>Rania S. <span class="stars" aria-label="5 out of 5 sta...	Accessible name for an element that has no visible text.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #db2777;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 60rem;	Limits how wide the element can grow, keeping lines readable.

Declaration	What it does
padding: 0 1rem;	Space inside the element between its border and content.
display: grid;	Turns the element into a grid container.
gap: 1.5rem;	Space between grid or flex items without extra margins.
grid-template-columns: repeat(auto-fit, minmax(16rem, 1fr));	Defines the columns of the grid.
background: var(--accent);	Background colour or image.
border-radius: 14px;	Rounds the corners.
position: relative;	Keeps normal flow but becomes the reference for absolutely positioned children.
content: "\201C";	The text or empty string for a pseudo-element.
position: absolute;	Removes the element from flow and positions it relative to the nearest positioned ancestor.
font-size: 5rem;	Size of the text.
opacity: .25;	Transparency from 0 (invisible) to 1 (solid).
font-weight: 600;	Thickness of the text.

Check your work

- Attribution is outside the blockquote
- Stars have a text alternative
- Quote mark does not overlap text badly
- Cards equal height

Exercises

1. Add photos of the customers.
2. Turn the section into a horizontal scroll-snap carousel.
3. Add schema.org Review microdata.

Theme data for this project

Field	Value
Business	Cleopatra Beauty Salon
Tagline	Hair, nails and skin care
City	Dokki
Owner	Mariam Adel
Brand colour	#db2777
Accent colour	#fdf2f8
Offers	Haircut and blow-dry (350 EGP); Manicure (200 EGP); Facial (600 EGP); Bridal package (4500 EGP)

Project 319: Testimonials section for Suez Auto Service

Theme: Suez Auto Service (Suez) | Level 2 | Files: index.html, styles.css

Brief

Show three customer quotes as cards with a large decorative quotation mark, the customer's name and a star rating.

Learning goals

- Mark up quotes correctly with figure, blockquote and figcaption
- Position a decorative ::before
- Label icon-only content with aria-label

Elements and CSS used

HTML elements	CSS features
figure, blockquote, p, figcaption, span	position: relative/absolute, ::before, content, opacity, font-style, grid

Build guide

1. Write one <figure> per review: blockquote with the text, figcaption with the name.
2. Add the stars in a span with an aria-label.
3. Grid the figures.
4. Set figure position: relative.
5. Add the big quotation mark with ::before positioned absolutely.
6. Colour the stars.

Project 319: index.html

Project 322 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Delta Kids Library - Reviews</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
What customers say about Delta Kids Library	The main heading; only one per page.
	Generic block container for grouping and layout.
<figure>	Self-contained media with an optional caption.
<blockquote> The best programme experience in Tanta. </blockqu...	A paragraph of text.
<figcaption>Heba M. <span class="stars" aria-label="5 out of 5 star...	Caption for the figure.

Line	What it does
<blockquote> Friendly staff and fair prices. </blockquote>	A long quotation from another source.
<figcaption>Ziad K. <span class="stars" aria-label="5 out of 5 star...	Generic inline container for styling.
<figcaption>Rania S. <span class="stars" aria-label="5 out of 5 sta...	Accessible name for an element that has no visible text.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #ea580c;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 60rem;	Limits how wide the element can grow, keeping lines readable.

Declaration	What it does
padding: 0 1rem;	Space inside the element between its border and content.
display: grid;	Turns the element into a grid container.
gap: 1.5rem;	Space between grid or flex items without extra margins.
grid-template-columns: repeat(auto-fit, minmax(16rem, 1fr));	Defines the columns of the grid.
background: var(--accent);	Background colour or image.
border-radius: 14px;	Rounds the corners.
position: relative;	Keeps normal flow but becomes the reference for absolutely positioned children.
content: "\201C";	The text or empty string for a pseudo-element.
position: absolute;	Removes the element from flow and positions it relative to the nearest positioned ancestor.
font-size: 5rem;	Size of the text.
opacity: .25;	Transparency from 0 (invisible) to 1 (solid).
font-weight: 600;	Thickness of the text.

Check your work

- Attribution is outside the blockquote
- Stars have a text alternative
- Quote mark does not overlap text badly
- Cards equal height

Exercises

1. Add photos of the customers.
2. Turn the section into a horizontal scroll-snap carousel.
3. Add schema.org Review microdata.

Theme data for this project

Field	Value
Business	Delta Kids Library
Tagline	Stories, reading clubs and homework help
City	Tanta
Owner	Ghada Kamel
Brand colour	#ea580c
Accent colour	#fff7ed
Offers	Story hour (Free); Reading club (50 EGP per month); Homework help (Free); Summer challenge (Free)

Project 323: Testimonials section for Nubian Guest House

Theme: Nubian Guest House (Aswan) | Level 2 | Files: index.html, styles.css

Brief

Show three customer quotes as cards with a large decorative quotation mark, the customer's name and a star rating.

Learning goals

- Mark up quotes correctly with figure, blockquote and figcaption
- Position a decorative ::before
- Label icon-only content with aria-label

Elements and CSS used

HTML elements	CSS features
figure, blockquote, p, figcaption, span	position: relative/absolute, ::before, content, opacity, font-style, grid

Build guide

1. Write one <figure> per review: blockquote with the text, figcaption with the name.
2. Add the stars in a span with an aria-label.
3. Grid the figures.
4. Set figure position: relative.
5. Add the big quotation mark with ::before positioned absolutely.
6. Colour the stars.

Project 323: index.html

2. Turn the section into a horizontal scroll-snap carousel.
3. Add schema.org Review microdata.

Theme data for this project

Field	Value
Business	Minya Coding Club
Tagline	Free weekend coding for teenagers
City	Minya
Owner	Youssef Hany
Brand colour	#2563eb
Accent colour	#eff6ff
Offers	HTML weekend (Free); CSS art (Free); Scratch games (Free); Hackathon (Free)

Project type: Newsletter sign-up box

Level 1 | 25 projects, one per theme

Create a centred sign-up card with a single email field and button on one line, a visually hidden label and a privacy note.

Project 326: Newsletter sign-up box for Cairo Book Shop

Theme: Cairo Book Shop (Giza) | Level 1 | Files: index.html, styles.css

Brief

Create a centred sign-up card with a single email field and button on one line, a visually hidden label and a privacy note.

Learning goals

- Hide a label visually but keep it for screen readers
- Put input and button on one line with Flexbox and let them wrap
- Use placeholder correctly (hint, not label)

Elements and CSS used

HTML elements	CSS features
section, form, label, input, button, p, a	flex: 1 1 12rem, flex-wrap, .sr-only pattern, border-radius: 999px, place-items

Build guide

1. Write the section with heading, text, form and note.
2. Add a label with class sr-only before the input.
3. Use type="email" and required.
4. Make the form a flex row that wraps.
5. Give the input flex: 1 1 12rem so it grows but wraps below 12rem.
6. Centre the card on a coloured page.

Project 326: index.html

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1">
  <title>Cairo Book Shop - Newsletter</title>
  <link rel="stylesheet" href="styles.css">
</head>
<body>
  <main>
    <section class="signup">
      <h1>Get Cairo Book Shop news</h1>
      <p>New books, offers and events. One email a month, no spam.</p>
      <form action="/subscribe" method="post">
        <label for="email" class="sr-only">Email address</label>
        <input id="email" name="email" type="email"
placeholder="you@example.com" required autocomplete="email">
        <button type="submit">Subscribe</button>
      </form>
      <p class="small">By subscribing you agree to our <a
href="privacy.html">privacy policy</a>.</p>
    </section>
  </main>
</body>
</html>
```

Project 326: styles.css

```
*, *::before, *::after { box-sizing: border-box; }
:root { --brand: #b90000; --accent: #f4f1ea; --ink: #1b2431; --muted:
#5b6472; --line: #d9d9d9; }
body { margin: 0; font-family: system-ui, Arial, sans-serif; line-
height: 1.6; color: var(--ink); }
main { min-height: 100vh; display: grid; place-items: center; padding:
 1rem; background: var(--brand); }
.signup { background: #fff; padding: 2.5rem; border-radius: 18px; max-
width: 30rem; text-align: center; }
form { display: flex; gap: .5rem; flex-wrap: wrap; }
input { flex: 1 1 12rem; padding: .8rem 1rem; border: 1px solid #bbb;
border-radius: 999px; font: inherit; }
button { padding: .8rem 1.4rem; border: 0; border-radius: 999px;
background: var(--brand); color: #fff; font: inherit; cursor: pointer;
 }
.small { font-size: .8rem; color: var(--muted); }
.sr-only { position: absolute; width: 1px; height: 1px; overflow:
hidden; clip: rect(0 0 0 0); white-space: nowrap; }
```

Project 326 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Cairo Book Shop - Newsletter</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
<section class="signup">	A thematic group of content, normally with its own heading.
Get Cairo Book Shop news	The main heading; only one per page.
New books, offers and events. One email a month, no spam.	A paragraph of text.
<form action="/subscribe" method="post">	A form; action is where the data goes, method how it is sent.
<label for="email" class="sr-only">Email address</label>	Text label for a control; for matches the control's id, or the label wraps the control.

Line	What it does
<input id="email" name="email" type="email" placeholder="you@exampl...	Email field: validated automatically and shows the @ keyboard on phones.
<button type="submit">Subscribe</button>	A clickable button; inside a form it submits by default.
<p class="small">By subscribing you agree to our <a href="privacy.h...	A hyperlink; href gives the destination.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #b90000;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
min-height: 100vh;	At least as tall as the viewport.
display: grid;	Turns the element into a grid container.
place-items: center;	Centres items horizontally and vertically in a grid.

Declaration	What it does
padding: 1rem;	Space inside the element between its border and content.
background: var(--brand);	Background colour or image.
border-radius: 18px;	Rounds the corners.
max-width: 30rem;	Limits how wide the element can grow, keeping lines readable.
text-align: center;	Centres inline content such as text.
display: flex;	Turns the element into a flex container (one-dimensional layout).
gap: .5rem;	Space between grid or flex items without extra margins.
flex-wrap: wrap;	Allows flex items to move to a new line when they do not fit.
flex: 1 1 12rem;	The item can grow and shrink from the given basis.
border: 1px solid #bbb;	Changes the visual order of a flex item without changing the source.
border-radius: 999px;	Fully rounded pill shape.
font: inherit;	Makes form controls use the page font instead of the browser default.
border: 0;	Removes the default border (for example on an iframe or button).
border-radius: 999px;	The line around the element: width, style and colour.
cursor: pointer;	Shows the hand cursor to indicate something clickable.
font-size: .8rem;	Size of the text.
.sr-only {	Visually hidden but still read by screen readers.

Declaration	What it does
position: absolute;	Removes the element from flow and positions it relative to the nearest positioned ancestor.
overflow: hidden;	Clips content that sticks out, so images follow rounded corners.
clip: rect(0 0 0 0);	Part of the screen-reader-only pattern: clips the box to nothing.
white-space: nowrap;	Prevents text from wrapping to a new line.

Check your work

- Screen reader announces 'Email address'
- Placeholder disappears when typing; label does not
- Button wraps under the input on very narrow screens
- Contrast of white card on brand colour

Exercises

1. Add a success message with the :valid state.
2. Add a checkbox for consent.
3. Animate the card entrance with @keyframes.

button { padding: .8rem 1.4rem; border: 0; border-radius: 999px;
background: var(--brand); color: #fff; font: inherit; cursor: pointer;
 }
.small { font-size: .8rem; color: var(--muted); }
.sr-only { position: absolute; width: 1px; height: 1px; overflow:
hidden; clip: rect(0 0 0 0); white-space: nowrap; }
```

Project 329 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Delta Dental Clinic - Newsletter</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
<section class="signup">	A thematic group of content, normally with its own heading.
Get Delta Dental Clinic news	The main heading; only one per page.
New services, offers and events. One email a month, no spam.	A paragraph of text.
<form action="/subscribe" method="post">	A form; action is where the data goes, method how it is sent.
<label for="email" class="sr-only">Email address</label>	Text label for a control; for matches the control's id, or the label wraps the control.

Line	What it does
<input id="email" name="email" type="email" placeholder="you@exampl...	Email field: validated automatically and shows the @ keyboard on phones.
<button type="submit">Subscribe</button>	A clickable button; inside a form it submits by default.
<p class="small">By subscribing you agree to our <a href="privacy.h...	A hyperlink; href gives the destination.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #1d4ed8;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
min-height: 100vh;	At least as tall as the viewport.
display: grid;	Turns the element into a grid container.
place-items: center;	Centres items horizontally and vertically in a grid.

Declaration	What it does
padding: 1rem;	Space inside the element between its border and content.
background: var(--brand);	Background colour or image.
border-radius: 18px;	Rounds the corners.
max-width: 30rem;	Limits how wide the element can grow, keeping lines readable.
text-align: center;	Centres inline content such as text.
display: flex;	Turns the element into a flex container (one-dimensional layout).
gap: .5rem;	Space between grid or flex items without extra margins.
flex-wrap: wrap;	Allows flex items to move to a new line when they do not fit.
flex: 1 1 12rem;	The item can grow and shrink from the given basis.
border: 1px solid #bbb;	Changes the visual order of a flex item without changing the source.
border-radius: 999px;	Fully rounded pill shape.
font: inherit;	Makes form controls use the page font instead of the browser default.
border: 0;	Removes the default border (for example on an iframe or button).
border-radius: 999px;	The line around the element: width, style and colour.
cursor: pointer;	Shows the hand cursor to indicate something clickable.
font-size: .8rem;	Size of the text.
.sr-only {	Visually hidden but still read by screen readers.

Declaration	What it does
position: absolute;	Removes the element from flow and positions it relative to the nearest positioned ancestor.
overflow: hidden;	Clips content that sticks out, so images follow rounded corners.
clip: rect(0 0 0 0);	Part of the screen-reader-only pattern: clips the box to nothing.
white-space: nowrap;	Prevents text from wrapping to a new line.

Check your work

- Screen reader announces 'Email address'
- Placeholder disappears when typing; label does not
- Button wraps under the input on very narrow screens
- Contrast of white card on brand colour

Exercises

1. Add a success message with the :valid state.
2. Add a checkbox for consent.
3. Animate the card entrance with @keyframes.

Theme data for this project

Field	Value
Business	Delta Dental Clinic
Tagline	Gentle care for the whole family
City	Mansoura
Owner	Dr. Hana Youssef
Brand colour	#1d4ed8
Accent colour	#eff6ff

Field	Value
Offers	Check-up (300 EGP); Whitening (1500 EGP); Filling (600 EGP); Braces consultation (Free)

Project 330: Newsletter sign-up box for Red Sea Travel

Theme: Red Sea Travel (Hurghada) | Level 1 | Files: index.html, styles.css

Brief

Create a centred sign-up card with a single email field and button on one line, a visually hidden label and a privacy note.

Learning goals

- Hide a label visually but keep it for screen readers
- Put input and button on one line with Flexbox and let them wrap
- Use placeholder correctly (hint, not label)

Elements and CSS used

HTML elements	CSS features
section, form, label, input, button, p, a	flex: 1 1 12rem, flex-wrap, .sr-only pattern, border-radius: 999px, place-items

Build guide

1. Write the section with heading, text, form and note.
2. Add a label with class sr-only before the input.
3. Use type="email" and required.
4. Make the form a flex row that wraps.
5. Give the input flex: 1 1 12rem so it grows but wraps below 12rem.
6. Centre the card on a coloured page.

Project 330: index.html

```
<!DOCTYPE html>

Project 331: Newsletter sign-up box for Lotus Language School

Theme: Lotus Language School (Alexandria) | Level 1 | Files: index.html, styles.css

Brief

Create a centred sign-up card with a single email field and button on one line, a visually hidden label and a privacy note.

Learning goals

- Hide a label visually but keep it for screen readers
- Put input and button on one line with Flexbox and let them wrap
- Use placeholder correctly (hint, not label)

Elements and CSS used

HTML elements	CSS features
section, form, label, input, button, p, a	flex: 1 1 12rem, flex-wrap, .sr-only pattern, border-radius: 999px, place-items

Build guide

1. Write the section with heading, text, form and note.
2. Add a label with class sr-only before the input.
3. Use type="email" and required.
4. Make the form a flex row that wraps.
5. Give the input flex: 1 1 12rem so it grows but wraps below 12rem.

6. Centre the card on a coloured page.

Project 331: index.html

```
<!DOCTYPE html>

Project 332: Newsletter sign-up box for Green Leaf Cafe

Theme: Green Leaf Cafe (Zamalek) | Level 1 | Files: index.html, styles.css

Brief

Create a centred sign-up card with a single email field and button on one line, a visually hidden label and a privacy note.

Learning goals

- Hide a label visually but keep it for screen readers
- Put input and button on one line with Flexbox and let them wrap
- Use placeholder correctly (hint, not label)

Elements and CSS used

HTML elements	CSS features
section, form, label, input, button, p, a	flex: 1 1 12rem, flex-wrap, .sr-only pattern, border-radius: 999px, place-items

Build guide

1. Write the section with heading, text, form and note.
2. Add a label with class sr-only before the input.
3. Use type="email" and required.
4. Make the form a flex row that wraps.
5. Give the input flex: 1 1 12rem so it grows but wraps below 12rem.
6. Centre the card on a coloured page.

Project 332: index.html

Declaration	What it does
padding: 1rem;	Space inside the element between its border and content.
background: var(--brand);	Background colour or image.
border-radius: 18px;	Rounds the corners.
max-width: 30rem;	Limits how wide the element can grow, keeping lines readable.
text-align: center;	Centres inline content such as text.
display: flex;	Turns the element into a flex container (one-dimensional layout).
gap: .5rem;	Space between grid or flex items without extra margins.
flex-wrap: wrap;	Allows flex items to move to a new line when they do not fit.
flex: 1 1 12rem;	The item can grow and shrink from the given basis.
border: 1px solid #bbb;	Changes the visual order of a flex item without changing the source.
border-radius: 999px;	Fully rounded pill shape.
font: inherit;	Makes form controls use the page font instead of the browser default.
border: 0;	Removes the default border (for example on an iframe or button).
border-radius: 999px;	The line around the element: width, style and colour.
cursor: pointer;	Shows the hand cursor to indicate something clickable.
font-size: .8rem;	Size of the text.
.sr-only {	Visually hidden but still read by screen readers.

Declaration	What it does
position: absolute;	Removes the element from flow and positions it relative to the nearest positioned ancestor.
overflow: hidden;	Clips content that sticks out, so images follow rounded corners.
clip: rect(0 0 0 0);	Part of the screen-reader-only pattern: clips the box to nothing.
white-space: nowrap;	Prevents text from wrapping to a new line.

Check your work

- Screen reader announces 'Email address'
- Placeholder disappears when typing; label does not
- Button wraps under the input on very narrow screens
- Contrast of white card on brand colour

Exercises

1. Add a success message with the :valid state.
2. Add a checkbox for consent.
3. Animate the card entrance with @keyframes.

Theme data for this project

Field	Value
Business	Green Leaf Cafe
Tagline	Specialty coffee and quiet corners
City	Zamalek
Owner	Karim Said
Brand colour	#166534
Accent colour	#f0fdf4

Field	Value
Offers	Flat white (55 EGP); Cold brew (60 EGP); Hibiscus iced tea (40 EGP); Cheesecake (75 EGP)

Project 333: Newsletter sign-up box for Sinai Trekking Club

Theme: Sinai Trekking Club (Saint Catherine) | Level 1 | Files: index.html, styles.css

Brief

Create a centred sign-up card with a single email field and button on one line, a visually hidden label and a privacy note.

Learning goals

- Hide a label visually but keep it for screen readers
- Put input and button on one line with Flexbox and let them wrap
- Use placeholder correctly (hint, not label)

Elements and CSS used

HTML elements	CSS features
section, form, label, input, button, p, a	flex: 1 1 12rem, flex-wrap, .sr-only pattern, border-radius: 999px, place-items

Build guide

1. Write the section with heading, text, form and note.
2. Add a label with class sr-only before the input.
3. Use type="email" and required.
4. Make the form a flex row that wraps.
5. Give the input flex: 1 1 12rem so it grows but wraps below 12rem.

6. Centre the card on a coloured page.

Project 333: index.html

```
<!DOCTYPE html>

Project 333 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Sinai Trekking Club - Newsletter</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
<section class="signup">	A thematic group of content, normally with its own heading.
Get Sinai Trekking Club news	The main heading; only one per page.
New hikes, offers and events. One email a month, no spam.	A paragraph of text.
<form action="/subscribe" method="post">	A form; action is where the data goes, method how it is sent.
<label for="email" class="sr-only">Email address</label>	Text label for a control; for matches the control's id, or the label wraps the control.

Line	What it does
<input id="email" name="email" type="email" placeholder="you@exampl...	Email field: validated automatically and shows the @ keyboard on phones.
<button type="submit">Subscribe</button>	A clickable button; inside a form it submits by default.
<p class="small">By subscribing you agree to our <a href="privacy.h...	A hyperlink; href gives the destination.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #92400e;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
min-height: 100vh;	At least as tall as the viewport.
display: grid;	Turns the element into a grid container.
place-items: center;	Centres items horizontally and vertically in a grid.

Declaration	What it does
padding: 1rem;	Space inside the element between its border and content.
background: var(--brand);	Background colour or image.
border-radius: 18px;	Rounds the corners.
max-width: 30rem;	Limits how wide the element can grow, keeping lines readable.
text-align: center;	Centres inline content such as text.
display: flex;	Turns the element into a flex container (one-dimensional layout).
gap: .5rem;	Space between grid or flex items without extra margins.
flex-wrap: wrap;	Allows flex items to move to a new line when they do not fit.
flex: 1 1 12rem;	The item can grow and shrink from the given basis.
border: 1px solid #bbb;	Changes the visual order of a flex item without changing the source.
border-radius: 999px;	Fully rounded pill shape.
font: inherit;	Makes form controls use the page font instead of the browser default.
border: 0;	Removes the default border (for example on an iframe or button).
border-radius: 999px;	The line around the element: width, style and colour.
cursor: pointer;	Shows the hand cursor to indicate something clickable.
font-size: .8rem;	Size of the text.
.sr-only {	Visually hidden but still read by screen readers.

Declaration	What it does
position: absolute;	Removes the element from flow and positions it relative to the nearest positioned ancestor.
overflow: hidden;	Clips content that sticks out, so images follow rounded corners.
clip: rect(0 0 0 0);	Part of the screen-reader-only pattern: clips the box to nothing.
white-space: nowrap;	Prevents text from wrapping to a new line.

Check your work

- Screen reader announces 'Email address'
- Placeholder disappears when typing; label does not
- Button wraps under the input on very narrow screens
- Contrast of white card on brand colour

Exercises

1. Add a success message with the :valid state.
2. Add a checkbox for consent.
3. Animate the card entrance with @keyframes.

Theme data for this project

Field	Value
Business	Sinai Trekking Club
Tagline	Guided mountain walks for every level
City	Saint Catherine
Owner	Yara Hamdy
Brand colour	#92400e
Accent colour	#fffbeb

Field	Value
Offers	Mount Sinai sunrise (400 EGP); Blue Desert loop (250 EGP); Wadi Gnai (300 EGP); Three-day traverse (1900 EGP)

Project 334: Newsletter sign-up box for Horizon Photography

Theme: Horizon Photography (Maadi) | Level 1 | Files: index.html, styles.css

Brief

Create a centred sign-up card with a single email field and button on one line, a visually hidden label and a privacy note.

Learning goals

- Hide a label visually but keep it for screen readers
- Put input and button on one line with Flexbox and let them wrap
- Use placeholder correctly (hint, not label)

Elements and CSS used

HTML elements	CSS features
section, form, label, input, button, p, a	flex: 1 1 12rem, flex-wrap, .sr-only pattern, border-radius: 999px, place-items

Build guide

1. Write the section with heading, text, form and note.
2. Add a label with class sr-only before the input.
3. Use type="email" and required.
4. Make the form a flex row that wraps.
5. Give the input flex: 1 1 12rem so it grows but wraps below 12rem.
6. Centre the card on a coloured page.

Project 335: Newsletter sign-up box for Papyrus Stationery

Theme: Papyrus Stationery (Heliopolis) | Level 1 | Files: index.html, styles.css

Brief

Create a centred sign-up card with a single email field and button on one line, a visually hidden label and a privacy note.

Learning goals

- Hide a label visually but keep it for screen readers
- Put input and button on one line with Flexbox and let them wrap
- Use placeholder correctly (hint, not label)

Elements and CSS used

HTML elements	CSS features
section, form, label, input, button, p, a	flex: 1 1 12rem, flex-wrap, .sr-only pattern, border-radius: 999px, place-items

Build guide

1. Write the section with heading, text, form and note.
2. Add a label with class sr-only before the input.
3. Use type="email" and required.
4. Make the form a flex row that wraps.
5. Give the input flex: 1 1 12rem so it grows but wraps below 12rem.
6. Centre the card on a coloured page.

Project 335: index.html

```
<!DOCTYPE html>

<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Papyrus Stationery - Newsletter</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
<section class="signup">	A thematic group of content, normally with its own heading.
Get Papyrus Stationery news	The main heading; only one per page.
New products, offers and events. One email a month, no spam.	A paragraph of text.
<form action="/subscribe" method="post">	A form; action is where the data goes, method how it is sent.
<label for="email" class="sr-only">Email address</label>	Text label for a control; for matches the control's id, or the label wraps the control.

Line	What it does
<input id="email" name="email" type="email" placeholder="you@exampl...	Email field: validated automatically and shows the @ keyboard on phones.
<button type="submit">Subscribe</button>	A clickable button; inside a form it submits by default.
<p class="small">By subscribing you agree to our <a href="privacy.h...	A hyperlink; href gives the destination.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #be185d;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
min-height: 100vh;	At least as tall as the viewport.
display: grid;	Turns the element into a grid container.
place-items: center;	Centres items horizontally and vertically in a grid.

Declaration	What it does
padding: 1rem;	Space inside the element between its border and content.
background: var(--brand);	Background colour or image.
border-radius: 18px;	Rounds the corners.
max-width: 30rem;	Limits how wide the element can grow, keeping lines readable.
text-align: center;	Centres inline content such as text.
display: flex;	Turns the element into a flex container (one-dimensional layout).
gap: .5rem;	Space between grid or flex items without extra margins.
flex-wrap: wrap;	Allows flex items to move to a new line when they do not fit.
flex: 1 1 12rem;	The item can grow and shrink from the given basis.
border: 1px solid #bbb;	Changes the visual order of a flex item without changing the source.
border-radius: 999px;	Fully rounded pill shape.
font: inherit;	Makes form controls use the page font instead of the browser default.
border: 0;	Removes the default border (for example on an iframe or button).
border-radius: 999px;	The line around the element: width, style and colour.
cursor: pointer;	Shows the hand cursor to indicate something clickable.
font-size: .8rem;	Size of the text.
.sr-only {	Visually hidden but still read by screen readers.

Declaration	What it does
position: absolute;	Removes the element from flow and positions it relative to the nearest positioned ancestor.
overflow: hidden;	Clips content that sticks out, so images follow rounded corners.
clip: rect(0 0 0 0);	Part of the screen-reader-only pattern: clips the box to nothing.
white-space: nowrap;	Prevents text from wrapping to a new line.

Check your work

- Screen reader announces 'Email address'
- Placeholder disappears when typing; label does not
- Button wraps under the input on very narrow screens
- Contrast of white card on brand colour

Exercises

1. Add a success message with the :valid state.
2. Add a checkbox for consent.
3. Animate the card entrance with @keyframes.

Theme data for this project

Project 336: Newsletter sign-up box for Oasis Plant Nursery

Theme: Oasis Plant Nursery (Sheikh Zayed) | Level 1 | Files: index.html, styles.css

Brief

Create a centred sign-up card with a single email field and button on one line, a visually hidden label and a privacy note.

Learning goals

- Hide a label visually but keep it for screen readers
- Put input and button on one line with Flexbox and let them wrap
- Use placeholder correctly (hint, not label)

Elements and CSS used

HTML elements	CSS features
section, form, label, input, button, p, a	flex: 1 1 12rem, flex-wrap, .sr-only pattern, border-radius: 999px, place-items

Build guide

1. Write the section with heading, text, form and note.
2. Add a label with class sr-only before the input.
3. Use type="email" and required.
4. Make the form a flex row that wraps.
5. Give the input flex: 1 1 12rem so it grows but wraps below 12rem.

6. Centre the card on a coloured page.

Project 336: index.html

```

Project 336 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Oasis Plant Nursery - Newsletter</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
<section class="signup">	A thematic group of content, normally with its own heading.
Get Oasis Plant Nursery news	The main heading; only one per page.
New plants, offers and events. One email a month, no spam.	A paragraph of text.
<form action="/subscribe" method="post">	A form; action is where the data goes, method how it is sent.
<label for="email" class="sr-only">Email address</label>	Text label for a control; for matches the control's id, or the label wraps the control.

Line	What it does
<input id="email" name="email" type="email" placeholder="you@exampl...	Email field: validated automatically and shows the @ keyboard on phones.
<button type="submit">Subscribe</button>	A clickable button; inside a form it submits by default.
<p class="small">By subscribing you agree to our <a href="privacy.h...	A hyperlink; href gives the destination.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #15803d;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
min-height: 100vh;	At least as tall as the viewport.
display: grid;	Turns the element into a grid container.
place-items: center;	Centres items horizontally and vertically in a grid.

Declaration	What it does
padding: 1rem;	Space inside the element between its border and content.
background: var(--brand);	Background colour or image.
border-radius: 18px;	Rounds the corners.
max-width: 30rem;	Limits how wide the element can grow, keeping lines readable.
text-align: center;	Centres inline content such as text.
display: flex;	Turns the element into a flex container (one-dimensional layout).
gap: .5rem;	Space between grid or flex items without extra margins.
flex-wrap: wrap;	Allows flex items to move to a new line when they do not fit.
flex: 1 1 12rem;	The item can grow and shrink from the given basis.
border: 1px solid #bbb;	Changes the visual order of a flex item without changing the source.
border-radius: 999px;	Fully rounded pill shape.
font: inherit;	Makes form controls use the page font instead of the browser default.
border: 0;	Removes the default border (for example on an iframe or button).
border-radius: 999px;	The line around the element: width, style and colour.
cursor: pointer;	Shows the hand cursor to indicate something clickable.
font-size: .8rem;	Size of the text.
.sr-only {	Visually hidden but still read by screen readers.

Declaration	What it does
position: absolute;	Removes the element from flow and positions it relative to the nearest positioned ancestor.
overflow: hidden;	Clips content that sticks out, so images follow rounded corners.
clip: rect(0 0 0 0);	Part of the screen-reader-only pattern: clips the box to nothing.
white-space: nowrap;	Prevents text from wrapping to a new line.

Check your work

- Screen reader announces 'Email address'
- Placeholder disappears when typing; label does not
- Button wraps under the input on very narrow screens
- Contrast of white card on brand colour

Exercises

1. Add a success message with the :valid state.
2. Add a checkbox for consent.
3. Animate the card entrance with @keyframes.

Theme data for this project

Field	Value
Business	Oasis Plant Nursery
Tagline	Indoor plants and gardening advice
City	Sheikh Zayed
Owner	Hossam Ali
Brand colour	#15803d
Accent colour	#f7fee7

Field	Value
Offers	Monstera (250 EGP); Snake plant (120 EGP); Basil pot (45 EGP); Olive tree (600 EGP)

Project 337: Newsletter sign-up box for Cedar Furniture

Theme: Cedar Furniture (Damietta) | Level 1 | Files: index.html, styles.css

Brief

Create a centred sign-up card with a single email field and button on one line, a visually hidden label and a privacy note.

Learning goals

- Hide a label visually but keep it for screen readers
- Put input and button on one line with Flexbox and let them wrap
- Use placeholder correctly (hint, not label)

Elements and CSS used

HTML elements	CSS features
section, form, label, input, button, p, a	flex: 1 1 12rem, flex-wrap, .sr-only pattern, border-radius: 999px, place-items

Build guide

1. Write the section with heading, text, form and note.
2. Add a label with class sr-only before the input.
3. Use type="email" and required.
4. Make the form a flex row that wraps.
5. Give the input flex: 1 1 12rem so it grows but wraps below 12rem.
6. Centre the card on a coloured page.

Project 337: index.html

```
<!DOCTYPE html>
<html lang="en">
<head>

Project 338: Newsletter sign-up box for Byte Repair

Theme: Byte Repair (Nasr City) | Level 1 | Files: index.html, styles.css

Brief

Create a centred sign-up card with a single email field and button on one line, a visually hidden label and a privacy note.

Learning goals

- Hide a label visually but keep it for screen readers
- Put input and button on one line with Flexbox and let them wrap
- Use placeholder correctly (hint, not label)

Elements and CSS used

HTML elements	CSS features
section, form, label, input, button, p, a	flex: 1 1 12rem, flex-wrap, .sr-only pattern, border-radius: 999px, place-items

Build guide

1. Write the section with heading, text, form and note.
2. Add a label with class sr-only before the input.
3. Use type="email" and required.
4. Make the form a flex row that wraps.
5. Give the input flex: 1 1 12rem so it grows but wraps below 12rem.
6. Centre the card on a coloured page.

Project 338: index.html

Project 339: Newsletter sign-up box for Sahara Pet Care

Theme: Sahara Pet Care (New Cairo) | Level 1 | Files: index.html, styles.css

Brief

Create a centred sign-up card with a single email field and button on one line, a visually hidden label and a privacy note.

Learning goals

- Hide a label visually but keep it for screen readers
- Put input and button on one line with Flexbox and let them wrap
- Use placeholder correctly (hint, not label)

Elements and CSS used

HTML elements	CSS features
section, form, label, input, button, p, a	flex: 1 1 12rem, flex-wrap, .sr-only pattern, border-radius: 999px, place-items

Build guide

1. Write the section with heading, text, form and note.
2. Add a label with class sr-only before the input.
3. Use type="email" and required.
4. Make the form a flex row that wraps.
5. Give the input flex: 1 1 12rem so it grows but wraps below 12rem.
6. Centre the card on a coloured page.

Project 339: index.html

--brand: #c2410c;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
min-height: 100vh;	At least as tall as the viewport.
display: grid;	Turns the element into a grid container.
place-items: center;	Centres items horizontally and vertically in a grid.

Declaration	What it does
padding: 1rem;	Space inside the element between its border and content.
background: var(--brand);	Background colour or image.
border-radius: 18px;	Rounds the corners.
max-width: 30rem;	Limits how wide the element can grow, keeping lines readable.
text-align: center;	Centres inline content such as text.
display: flex;	Turns the element into a flex container (one-dimensional layout).
gap: .5rem;	Space between grid or flex items without extra margins.
flex-wrap: wrap;	Allows flex items to move to a new line when they do not fit.
flex: 1 1 12rem;	The item can grow and shrink from the given basis.
border: 1px solid #bbb;	Changes the visual order of a flex item without changing the source.
border-radius: 999px;	Fully rounded pill shape.
font: inherit;	Makes form controls use the page font instead of the browser default.
border: 0;	Removes the default border (for example on an iframe or button).
border-radius: 999px;	The line around the element: width, style and colour.
cursor: pointer;	Shows the hand cursor to indicate something clickable.
font-size: .8rem;	Size of the text.
.sr-only {	Visually hidden but still read by screen readers.

Declaration	What it does
position: absolute;	Removes the element from flow and positions it relative to the nearest positioned ancestor.
overflow: hidden;	Clips content that sticks out, so images follow rounded corners.
clip: rect(0 0 0 0);	Part of the screen-reader-only pattern: clips the box to nothing.
white-space: nowrap;	Prevents text from wrapping to a new line.

Check your work

- Screen reader announces 'Email address'
- Placeholder disappears when typing; label does not
- Button wraps under the input on very narrow screens
- Contrast of white card on brand colour

Exercises

1. Add a success message with the :valid state.
2. Add a checkbox for consent.
3. Animate the card entrance with @keyframes.

Theme data for this project

Field	Value
Business	Sahara Pet Care
Tagline	Grooming, boarding and vet visits
City	New Cairo
Owner	Rana Ibrahim
Brand colour	#c2410c
Accent colour	#fff7ed

Field	Value
Offers	Full grooming (400 EGP); Day boarding (250 EGP); Vaccination (300 EGP); Dog walking (100 EGP)

Project 340: Newsletter sign-up box for Alexandria Sailing School

Theme: Alexandria Sailing School (Alexandria) | Level 1 | Files: index.html, styles.css

Brief

Create a centred sign-up card with a single email field and button on one line, a visually hidden label and a privacy note.

Learning goals

- Hide a label visually but keep it for screen readers
- Put input and button on one line with Flexbox and let them wrap
- Use placeholder correctly (hint, not label)

Elements and CSS used

HTML elements	CSS features
section, form, label, input, button, p, a	flex: 1 1 12rem, flex-wrap, .sr-only pattern, border-radius: 999px, place-items

Build guide

1. Write the section with heading, text, form and note.
2. Add a label with class sr-only before the input.
3. Use type="email" and required.
4. Make the form a flex row that wraps.
5. Give the input flex: 1 1 12rem so it grows but wraps below 12rem.

6. Centre the card on a coloured page.

Project 340: index.html

```

Project 340 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Alexandria Sailing School - Newsletter</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
<section class="signup">	A thematic group of content, normally with its own heading.
Get Alexandria Sailing School news	The main heading; only one per page.
New lessons, offers and events. One email a month, no spam.	A paragraph of text.
<form action="/subscribe" method="post">	A form; action is where the data goes, method how it is sent.
<label for="email" class="sr-only">Email address</label>	Text label for a control; for matches the control's id, or the label wraps the control.

Line	What it does
<input id="email" name="email" type="email" placeholder="you@exampl...	Email field: validated automatically and shows the @ keyboard on phones.
<button type="submit">Subscribe</button>	A clickable button; inside a form it submits by default.
<p class="small">By subscribing you agree to our <a href="privacy.h...	A hyperlink; href gives the destination.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #1e40af;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
min-height: 100vh;	At least as tall as the viewport.
display: grid;	Turns the element into a grid container.
place-items: center;	Centres items horizontally and vertically in a grid.

Declaration	What it does
padding: 1rem;	Space inside the element between its border and content.
background: var(--brand);	Background colour or image.
border-radius: 18px;	Rounds the corners.
max-width: 30rem;	Limits how wide the element can grow, keeping lines readable.
text-align: center;	Centres inline content such as text.
display: flex;	Turns the element into a flex container (one-dimensional layout).
gap: .5rem;	Space between grid or flex items without extra margins.
flex-wrap: wrap;	Allows flex items to move to a new line when they do not fit.
flex: 1 1 12rem;	The item can grow and shrink from the given basis.
border: 1px solid #bbb;	Changes the visual order of a flex item without changing the source.
border-radius: 999px;	Fully rounded pill shape.
font: inherit;	Makes form controls use the page font instead of the browser default.
border: 0;	Removes the default border (for example on an iframe or button).
border-radius: 999px;	The line around the element: width, style and colour.
cursor: pointer;	Shows the hand cursor to indicate something clickable.
font-size: .8rem;	Size of the text.
.sr-only {	Visually hidden but still read by screen readers.

Declaration	What it does
position: absolute;	Removes the element from flow and positions it relative to the nearest positioned ancestor.
overflow: hidden;	Clips content that sticks out, so images follow rounded corners.
clip: rect(0 0 0 0);	Part of the screen-reader-only pattern: clips the box to nothing.
white-space: nowrap;	Prevents text from wrapping to a new line.

Check your work

- Screen reader announces 'Email address'
- Placeholder disappears when typing; label does not
- Button wraps under the input on very narrow screens
- Contrast of white card on brand colour

Exercises

1. Add a success message with the :valid state.
2. Add a checkbox for consent.
3. Animate the card entrance with @keyframes.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #9a3412;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
min-height: 100vh;	At least as tall as the viewport.
display: grid;	Turns the element into a grid container.
place-items: center;	Centres items horizontally and vertically in a grid.

Declaration	What it does
padding: 1rem;	Space inside the element between its border and content.
background: var(--brand);	Background colour or image.
border-radius: 18px;	Rounds the corners.
max-width: 30rem;	Limits how wide the element can grow, keeping lines readable.
text-align: center;	Centres inline content such as text.
display: flex;	Turns the element into a flex container (one-dimensional layout).
gap: .5rem;	Space between grid or flex items without extra margins.
flex-wrap: wrap;	Allows flex items to move to a new line when they do not fit.
flex: 1 1 12rem;	The item can grow and shrink from the given basis.
border: 1px solid #bbb;	Changes the visual order of a flex item without changing the source.
border-radius: 999px;	Fully rounded pill shape.
font: inherit;	Makes form controls use the page font instead of the browser default.
border: 0;	Removes the default border (for example on an iframe or button).
border-radius: 999px;	The line around the element: width, style and colour.
cursor: pointer;	Shows the hand cursor to indicate something clickable.
font-size: .8rem;	Size of the text.
.sr-only {	Visually hidden but still read by screen readers.

Declaration	What it does
position: absolute;	Removes the element from flow and positions it relative to the nearest positioned ancestor.
overflow: hidden;	Clips content that sticks out, so images follow rounded corners.
clip: rect(0 0 0 0);	Part of the screen-reader-only pattern: clips the box to nothing.
white-space: nowrap;	Prevents text from wrapping to a new line.

Check your work

- Screen reader announces 'Email address'
- Placeholder disappears when typing; label does not
- Button wraps under the input on very narrow screens
- Contrast of white card on brand colour

Exercises

1. Add a success message with the :valid state.
2. Add a checkbox for consent.
3. Animate the card entrance with @keyframes.

Theme data for this project

Field	Value

Project 343: Newsletter sign-up box for Cleopatra Beauty Salon

Theme: Cleopatra Beauty Salon (Dokki) | Level 1 | Files: index.html, styles.css

Brief

Create a centred sign-up card with a single email field and button on one line, a visually hidden label and a privacy note.

Learning goals

- Hide a label visually but keep it for screen readers
- Put input and button on one line with Flexbox and let them wrap
- Use placeholder correctly (hint, not label)

Elements and CSS used

HTML elements	CSS features
section, form, label, input, button, p, a	flex: 1 1 12rem, flex-wrap, .sr-only pattern, border-radius: 999px, place-items

Build guide

1. Write the section with heading, text, form and note.
2. Add a label with class sr-only before the input.
3. Use type="email" and required.
4. Make the form a flex row that wraps.
5. Give the input flex: 1 1 12rem so it grows but wraps below 12rem.

6. Centre the card on a coloured page.

Project 343 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Cleopatra Beauty Salon - Newsletter</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
<section class="signup">	A thematic group of content, normally with its own heading.
Get Cleopatra Beauty Salon news	The main heading; only one per page.
New treatments, offers and events. One email a month, no spam.	A paragraph of text.
<form action="/subscribe" method="post">	A form; action is where the data goes, method how it is sent.
<label for="email" class="sr-only">Email address</label>	Text label for a control; for matches the control's id, or the label wraps the control.

Line	What it does
<input id="email" name="email" type="email" placeholder="you@exampl...	Email field: validated automatically and shows the @ keyboard on phones.
<button type="submit">Subscribe</button>	A clickable button; inside a form it submits by default.
<p class="small">By subscribing you agree to our <a href="privacy.h...	A hyperlink; href gives the destination.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #db2777;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
min-height: 100vh;	At least as tall as the viewport.
display: grid;	Turns the element into a grid container.
place-items: center;	Centres items horizontally and vertically in a grid.

Declaration	What it does
padding: 1rem;	Space inside the element between its border and content.
background: var(--brand);	Background colour or image.
border-radius: 18px;	Rounds the corners.
max-width: 30rem;	Limits how wide the element can grow, keeping lines readable.
text-align: center;	Centres inline content such as text.
display: flex;	Turns the element into a flex container (one-dimensional layout).
gap: .5rem;	Space between grid or flex items without extra margins.
flex-wrap: wrap;	Allows flex items to move to a new line when they do not fit.
flex: 1 1 12rem;	The item can grow and shrink from the given basis.
border: 1px solid #bbb;	Changes the visual order of a flex item without changing the source.
border-radius: 999px;	Fully rounded pill shape.
font: inherit;	Makes form controls use the page font instead of the browser default.
border: 0;	Removes the default border (for example on an iframe or button).
border-radius: 999px;	The line around the element: width, style and colour.
cursor: pointer;	Shows the hand cursor to indicate something clickable.
font-size: .8rem;	Size of the text.
.sr-only {	Visually hidden but still read by screen readers.

Declaration	What it does
position: absolute;	Removes the element from flow and positions it relative to the nearest positioned ancestor.
overflow: hidden;	Clips content that sticks out, so images follow rounded corners.
clip: rect(0 0 0 0);	Part of the screen-reader-only pattern: clips the box to nothing.
white-space: nowrap;	Prevents text from wrapping to a new line.

Check your work

- Screen reader announces 'Email address'
- Placeholder disappears when typing; label does not
- Button wraps under the input on very narrow screens
- Contrast of white card on brand colour

Exercises

1. Add a success message with the :valid state.
2. Add a checkbox for consent.
3. Animate the card entrance with @keyframes.

Theme data for this project

Field	Value
Business	Cleopatra Beauty Salon
Tagline	Hair, nails and skin care
City	Dokki
Owner	Mariam Adel
Brand colour	#db2777
Accent colour	#fdf2f8

Field	Value
Offers	Haircut and blow-dry (350 EGP); Manicure (200 EGP); Facial (600 EGP); Bridal package (4500 EGP)

Project 344: Newsletter sign-up box for Suez Auto Service

Theme: Suez Auto Service (Suez) | Level 1 | Files: index.html, styles.css

Brief

Create a centred sign-up card with a single email field and button on one line, a visually hidden label and a privacy note.

Learning goals

- Hide a label visually but keep it for screen readers
- Put input and button on one line with Flexbox and let them wrap
- Use placeholder correctly (hint, not label)

Elements and CSS used

HTML elements	CSS features
section, form, label, input, button, p, a	flex: 1 1 12rem, flex-wrap, .sr-only pattern, border-radius: 999px, place-items

Build guide

1. Write the section with heading, text, form and note.
2. Add a label with class sr-only before the input.
3. Use type="email" and required.
4. Make the form a flex row that wraps.
5. Give the input flex: 1 1 12rem so it grows but wraps below 12rem.
6. Centre the card on a coloured page.

Project 344: index.html

```
<!DOCTYPE html>

Project 345: Newsletter sign-up box for Luxor Music Academy

Theme: Luxor Music Academy (Luxor) | Level 1 | Files: index.html, styles.css

Brief

Create a centred sign-up card with a single email field and button on one line, a visually hidden label and a privacy note.

Learning goals

- Hide a label visually but keep it for screen readers
- Put input and button on one line with Flexbox and let them wrap
- Use placeholder correctly (hint, not label)

Elements and CSS used

HTML elements	CSS features
section, form, label, input, button, p, a	flex: 1 1 12rem, flex-wrap, .sr-only pattern, border-radius: 999px, place-items

Build guide

1. Write the section with heading, text, form and note.
2. Add a label with class sr-only before the input.
3. Use type="email" and required.
4. Make the form a flex row that wraps.
5. Give the input flex: 1 1 12rem so it grows but wraps below 12rem.
6. Centre the card on a coloured page.

Project 345: index.html

<main>	The unique content of this page; exactly one per page.
<section class="signup">	A thematic group of content, normally with its own heading.
Get Port Said Seafood news	The main heading; only one per page.
New dishes, offers and events. One email a month, no spam.	A paragraph of text.
<form action="/subscribe" method="post">	A form; action is where the data goes, method how it is sent.
<label for="email" class="sr-only">Email address</label>	Text label for a control; for matches the control's id, or the label wraps the control.

Line	What it does
<input id="email" name="email" type="email" placeholder="you@exampl...	Email field: validated automatically and shows the @ keyboard on phones.
<button type="submit">Subscribe</button>	A clickable button; inside a form it submits by default.
<p class="small">By subscribing you agree to our <a href="privacy.h...	A hyperlink; href gives the destination.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #0e7490;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
min-height: 100vh;	At least as tall as the viewport.
display: grid;	Turns the element into a grid container.
place-items: center;	Centres items horizontally and vertically in a grid.

Declaration	What it does
padding: 1rem;	Space inside the element between its border and content.
background: var(--brand);	Background colour or image.
border-radius: 18px;	Rounds the corners.
max-width: 30rem;	Limits how wide the element can grow, keeping lines readable.
text-align: center;	Centres inline content such as text.
display: flex;	Turns the element into a flex container (one-dimensional layout).
gap: .5rem;	Space between grid or flex items without extra margins.
flex-wrap: wrap;	Allows flex items to move to a new line when they do not fit.
flex: 1 1 12rem;	The item can grow and shrink from the given basis.
border: 1px solid #bbb;	Changes the visual order of a flex item without changing the source.
border-radius: 999px;	Fully rounded pill shape.
font: inherit;	Makes form controls use the page font instead of the browser default.
border: 0;	Removes the default border (for example on an iframe or button).
border-radius: 999px;	The line around the element: width, style and colour.
cursor: pointer;	Shows the hand cursor to indicate something clickable.
font-size: .8rem;	Size of the text.
.sr-only {	Visually hidden but still read by screen readers.

Declaration	What it does
position: absolute;	Removes the element from flow and positions it relative to the nearest positioned ancestor.
overflow: hidden;	Clips content that sticks out, so images follow rounded corners.
clip: rect(0 0 0 0);	Part of the screen-reader-only pattern: clips the box to nothing.
white-space: nowrap;	Prevents text from wrapping to a new line.

Check your work

- Screen reader announces 'Email address'
- Placeholder disappears when typing; label does not
- Button wraps under the input on very narrow screens
- Contrast of white card on brand colour

Exercises

1. Add a success message with the :valid state.
2. Add a checkbox for consent.
3. Animate the card entrance with @keyframes.

Theme data for this project

Field	Value
Business	Port Said Seafood
Tagline	Grilled fish straight from the boats
City	Port Said
Owner	Sherif Wahba
Brand colour	#0e7490
Accent colour	#ecfeff

Field	Value
Offers	Grilled sea bass (320 EGP); Shrimp tagine (280 EGP); Calamari (190 EGP); Fish soup (120 EGP)

Project 347: Newsletter sign-up box for Delta Kids Library

Theme: Delta Kids Library (Tanta) | Level 1 | Files: index.html, styles.css

Brief

Create a centred sign-up card with a single email field and button on one line, a visually hidden label and a privacy note.

Learning goals

- Hide a label visually but keep it for screen readers
- Put input and button on one line with Flexbox and let them wrap
- Use placeholder correctly (hint, not label)

Elements and CSS used

HTML elements	CSS features
section, form, label, input, button, p, a	flex: 1 1 12rem, flex-wrap, .sr-only pattern, border-radius: 999px, place-items

Build guide

1. Write the section with heading, text, form and note.
2. Add a label with class sr-only before the input.
3. Use type="email" and required.
4. Make the form a flex row that wraps.
5. Give the input flex: 1 1 12rem so it grows but wraps below 12rem.
6. Centre the card on a coloured page.

Project 347: index.html

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1">
  <title>Delta Kids Library - Newsletter</title>
  <link rel="stylesheet" href="styles.css">
</head>
<body>
  <main>
    <section class="signup">
      <h1>Get Delta Kids Library news</h1>
      <p>New programmes, offers and events. One email a month, no
spam.</p>
      <form action="/subscribe" method="post">
        <label for="email" class="sr-only">Email address</label>
        <input id="email" name="email" type="email"
placeholder="you@example.com" required autocomplete="email">
        <button type="submit">Subscribe</button>
      </form>
      <p class="small">By subscribing you agree to our <a
href="privacy.html">privacy policy</a>.</p>
    </section>
  </main>
</body>
</html>
```

Project 347: styles.css

```
*, *::before, *::after { box-sizing: border-box; }

Project 349: Newsletter sign-up box for Ismailia Cycling Store

Theme: Ismailia Cycling Store (Ismailia) | Level 1 | Files: index.html, styles.css

Brief

Create a centred sign-up card with a single email field and button on one line, a visually hidden label and a privacy note.

Learning goals

- Hide a label visually but keep it for screen readers
- Put input and button on one line with Flexbox and let them wrap
- Use placeholder correctly (hint, not label)

Elements and CSS used

HTML elements	CSS features
section, form, label, input, button, p, a	flex: 1 1 12rem, flex-wrap, .sr-only pattern, border-radius: 999px, place-items

Build guide

1. Write the section with heading, text, form and note.
2. Add a label with class sr-only before the input.
3. Use type="email" and required.
4. Make the form a flex row that wraps.
5. Give the input flex: 1 1 12rem so it grows but wraps below 12rem.

6. Centre the card on a coloured page.

Project 349: index.html

<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
<section class="signup">	A thematic group of content, normally with its own heading.
Get Ismailia Cycling Store news	The main heading; only one per page.
New bikes, offers and events. One email a month, no spam.	A paragraph of text.
<form action="/subscribe" method="post">	A form; action is where the data goes, method how it is sent.
<label for="email" class="sr-only">Email address</label>	Text label for a control; for matches the control's id, or the label wraps the control.

Line	What it does
<input id="email" name="email" type="email" placeholder="you@exampl...	Email field: validated automatically and shows the @ keyboard on phones.
<button type="submit">Subscribe</button>	A clickable button; inside a form it submits by default.
<p class="small">By subscribing you agree to our <a href="privacy.h...	A hyperlink; href gives the destination.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #dc2626;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
min-height: 100vh;	At least as tall as the viewport.
display: grid;	Turns the element into a grid container.
place-items: center;	Centres items horizontally and vertically in a grid.

Declaration	What it does
padding: 1rem;	Space inside the element between its border and content.
background: var(--brand);	Background colour or image.
border-radius: 18px;	Rounds the corners.
max-width: 30rem;	Limits how wide the element can grow, keeping lines readable.
text-align: center;	Centres inline content such as text.
display: flex;	Turns the element into a flex container (one-dimensional layout).
gap: .5rem;	Space between grid or flex items without extra margins.
flex-wrap: wrap;	Allows flex items to move to a new line when they do not fit.
flex: 1 1 12rem;	The item can grow and shrink from the given basis.
border: 1px solid #bbb;	Changes the visual order of a flex item without changing the source.
border-radius: 999px;	Fully rounded pill shape.
font: inherit;	Makes form controls use the page font instead of the browser default.
border: 0;	Removes the default border (for example on an iframe or button).
border-radius: 999px;	The line around the element: width, style and colour.
cursor: pointer;	Shows the hand cursor to indicate something clickable.
font-size: .8rem;	Size of the text.
.sr-only {	Visually hidden but still read by screen readers.

Declaration	What it does
position: absolute;	Removes the element from flow and positions it relative to the nearest positioned ancestor.
overflow: hidden;	Clips content that sticks out, so images follow rounded corners.
clip: rect(0 0 0 0);	Part of the screen-reader-only pattern: clips the box to nothing.
white-space: nowrap;	Prevents text from wrapping to a new line.

Check your work

- Screen reader announces 'Email address'
- Placeholder disappears when typing; label does not
- Button wraps under the input on very narrow screens
- Contrast of white card on brand colour

Exercises

1. Add a success message with the :valid state.
2. Add a checkbox for consent.
3. Animate the card entrance with @keyframes.

Theme data for this project

Field	Value
Business	Ismailia Cycling Store
Tagline	Bikes, parts and Friday group rides
City	Ismailia
Owner	Bassem Adly
Brand colour	#dc2626

Field	Value
Offers	City bike (6500 EGP); Mountain bike (11000 EGP); Kids bike (3200 EGP); Tune-up (250 EGP)

Project 350: Newsletter sign-up box for Minya Coding Club

Theme: Minya Coding Club (Minya) | Level 1 | Files: index.html, styles.css

Brief

Create a centred sign-up card with a single email field and button on one line, a visually hidden label and a privacy note.

Learning goals

- Hide a label visually but keep it for screen readers
- Put input and button on one line with Flexbox and let them wrap
- Use placeholder correctly (hint, not label)

Elements and CSS used

HTML elements	CSS features
section, form, label, input, button, p, a	flex: 1 1 12rem, flex-wrap, .sr-only pattern, border-radius: 999px, place-items

Build guide

1. Write the section with heading, text, form and note.
2. Add a label with class sr-only before the input.
3. Use type="email" and required.
4. Make the form a flex row that wraps.
5. Give the input flex: 1 1 12rem so it grows but wraps below 12rem.
6. Centre the card on a coloured page.

Project 350: index.html

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1">
  <title>Minya Coding Club - Newsletter</title>
  <link rel="stylesheet" href="styles.css">
</head>
<body>
  <main>
    <section class="signup">
      <h1>Get Minya Coding Club news</h1>
      <p>New workshops, offers and events. One email a month, no spam.
</p>
      <form action="/subscribe" method="post">
        <label for="email" class="sr-only">Email address</label>
        <input id="email" name="email" type="email"
placeholder="you@example.com" required autocomplete="email">
        <button type="submit">Subscribe</button>
      </form>
      <p class="small">By subscribing you agree to our <a
href="privacy.html">privacy policy</a>.</p>
    </section>
  </main>
</body>
</html>
```

Project 350: styles.css

```
*, *::before, *::after { box-sizing: border-box; }
:root { --brand: #2563eb; --accent: #eff6ff; --ink: #1b2431; --muted:
#5b6472; --line: #d9d9d9; }
body { margin: 0; font-family: system-ui, Arial, sans-serif; line-
height: 1.6; color: var(--ink); }
main { min-height: 100vh; display: grid; place-items: center; padding:
 1rem; background: var(--brand); }
.signup { background: #fff; padding: 2.5rem; border-radius: 18px; max-
width: 30rem; text-align: center; }
form { display: flex; gap: .5rem; flex-wrap: wrap; }
input { flex: 1 1 12rem; padding: .8rem 1rem; border: 1px solid #bbb;
border-radius: 999px; font: inherit; }
button { padding: .8rem 1.4rem; border: 0; border-radius: 999px;
background: var(--brand); color: #fff; font: inherit; cursor: pointer;
 }
.small { font-size: .8rem; color: var(--muted); }
.sr-only { position: absolute; width: 1px; height: 1px; overflow:
hidden; clip: rect(0 0 0 0); white-space: nowrap; }
```

Project 350 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Minya Coding Club - Newsletter</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
<section class="signup">	A thematic group of content, normally with its own heading.
Get Minya Coding Club news	The main heading; only one per page.
New workshops, offers and events. One email a month, no spam.	A paragraph of text.
<form action="/subscribe" method="post">	A form; action is where the data goes, method how it is sent.
<label for="email" class="sr-only">Email address</label>	Text label for a control; for matches the control's id, or the label wraps the control.

Line	What it does
<input id="email" name="email" type="email" placeholder="you@exampl...	Email field: validated automatically and shows the @ keyboard on phones.
<button type="submit">Subscribe</button>	A clickable button; inside a form it submits by default.
<p class="small">By subscribing you agree to our <a href="privacy.h...	A hyperlink; href gives the destination.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #2563eb;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
min-height: 100vh;	At least as tall as the viewport.
display: grid;	Turns the element into a grid container.
place-items: center;	Centres items horizontally and vertically in a grid.

Declaration	What it does
padding: 1rem;	Space inside the element between its border and content.
background: var(--brand);	Background colour or image.
border-radius: 18px;	Rounds the corners.
max-width: 30rem;	Limits how wide the element can grow, keeping lines readable.
text-align: center;	Centres inline content such as text.
display: flex;	Turns the element into a flex container (one-dimensional layout).
gap: .5rem;	Space between grid or flex items without extra margins.
flex-wrap: wrap;	Allows flex items to move to a new line when they do not fit.
flex: 1 1 12rem;	The item can grow and shrink from the given basis.
border: 1px solid #bbb;	Changes the visual order of a flex item without changing the source.
border-radius: 999px;	Fully rounded pill shape.
font: inherit;	Makes form controls use the page font instead of the browser default.
border: 0;	Removes the default border (for example on an iframe or button).
border-radius: 999px;	The line around the element: width, style and colour.
cursor: pointer;	Shows the hand cursor to indicate something clickable.
font-size: .8rem;	Size of the text.
.sr-only {	Visually hidden but still read by screen readers.

Declaration	What it does
position: absolute;	Removes the element from flow and positions it relative to the nearest positioned ancestor.
overflow: hidden;	Clips content that sticks out, so images follow rounded corners.
clip: rect(0 0 0 0);	Part of the screen-reader-only pattern: clips the box to nothing.
white-space: nowrap;	Prevents text from wrapping to a new line.

Check your work

- Screen reader announces 'Email address'
- Placeholder disappears when typing; label does not
- Button wraps under the input on very narrow screens
- Contrast of white card on brand colour

Exercises

1. Add a success message with the :valid state.
2. Add a checkbox for consent.
3. Animate the card entrance with @keyframes.

Theme data for this project

Field	Value
Business	Minya Coding Club
Tagline	Free weekend coding for teenagers
City	Minya
Owner	Youssef Hany
Brand colour	#2563eb
Accent colour	#eff6ff

Field	Value
Offers	HTML weekend (Free); CSS art (Free); Scratch games (Free); Hackathon (Free)

Project type: Sidebar layout

Level 2 | 25 projects, one per theme

Build a documentation-style page: header, left sidebar of section links, content and footer, using named grid areas that rearrange at 800px.

Project 351: Sidebar layout for Cairo Book Shop

Theme: Cairo Book Shop (Giza) | Level 2 | Files: index.html, styles.css

Brief

Build a documentation-style page: header, left sidebar of section links, content and footer, using named grid areas that rearrange at 800px.

Learning goals

- Use grid-template-areas for whole-page layout
- Change the areas in a media query
- Make the sidebar sticky on wide screens

Elements and CSS used

HTML elements	CSS features
div, header, nav, ul, li, a, main, section, footer	grid-template-areas, grid-area, @media (min-width), position: sticky, align-self: start

Build guide

1. Write the four regions inside a .layout div.
2. Give each region a grid-area name.
3. Mobile first: one column, areas stacked.
4. At 800px switch to two columns with side and content side by side.
5. Turn the sidebar link list into a column on desktop.
6. Make the sidebar sticky.

Project 351: index.html

```
<!DOCTYPE html>
<html lang="en">

<header class="top"> Cairo Book Shop guide </header>	Introductory content: logo, title, navigation.
<nav class="side" aria-label="Sections">	A block of navigation links; aria-label names it for screen readers.
	Unordered (bulleted) list.
Learn HTML	A hyperlink; href gives the destination.
CSS in Practice	One list item.
<main class="content">	The unique content of this page; exactly one per page.

Line	What it does
<section id="sLearn HTML"><h2>Learn HTML</h2><p>From your first tag...	A thematic group of content, normally with its own heading.
<section id="sCSS in Practice"><h2>CSS in Practice</h2><p>Layouts, ...	Second-level heading for a section.
<section id="sJavaScript Basics"><h2>JavaScript Basics</h2><p>Make ...	A paragraph of text.
<footer class="bottom">© 2026 Cairo Book Shop</footer>	Footer of the page or of a section.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #b90000;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.

Declaration	What it does
min-height: 100vh;	At least as tall as the viewport.
display: grid;	Turns the element into a grid container.
grid-template-columns: 1fr;	Defines the columns of the grid.
grid-template-areas: "top" "side" "content" "bottom";	Names regions of the grid so children can be placed by name.
grid-area: top;	Places a child into a named area.
background: var(--brand);	Background colour or image.
padding: 1rem 1.5rem;	Space inside the element between its border and content.
font-size: 1.3rem;	Size of the text.
list-style: none;	Removes bullets or numbers from a list.
display: flex;	Turns the element into a flex container (one-dimensional layout).
flex-wrap: wrap;	Allows flex items to move to a new line when they do not fit.
gap: .5rem;	Space between grid or flex items without extra margins.
display: block;	Element starts on a new line and fills the width (used on links and images).
border-radius: 6px;	Rounds the corners.
text-decoration: none;	Removes the underline from links.
max-width: 50rem;	Limits how wide the element can grow, keeping lines readable.
border-top: 1px solid var(--line);	A top border used as an accent or separator.
@media (min-width: 800px) {	Applies from the given width upwards (mobile-first breakpoint).
flex-direction: column;	Stacks flex items vertically.

Declaration	What it does
position: sticky;	Scrolls normally until it reaches the given offset, then sticks.

Check your work

- Areas string has equal columns per row
- Anchor links jump to sections
- Sticky sidebar does not cover the footer
- Mobile shows links as a wrapped row

Exercises

1. Highlight the current section link with :target.
2. Add a right column for 'on this page'.
3. Collapse the sidebar with a checkbox toggle.

Project 353 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Pyramid Fitness - Guide</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
	Generic block container for grouping and layout.
<header class="top"> Pyramid Fitness guide </header>	Introductory content: logo, title, navigation.
<nav class="side" aria-label="Sections">	A block of navigation links; aria-label names it for screen readers.
	Unordered (bulleted) list.
Morning yoga	A hyperlink; href gives the destination.
Strength circuit	One list item.

Line	What it does
<main class="content">	The unique content of this page; exactly one per page.
<section id="sMorning yoga"><h2>Morning yoga</h2><p>Flexibility and...	A thematic group of content, normally with its own heading.
<section id="sStrength circuit"><h2>Strength circuit</h2><p>Full bo...	Second-level heading for a section.
<section id="sSpinning"><h2>Spinning</h2><p>High energy cycling. Pr...	A paragraph of text.
<footer class="bottom">© 2026 Pyramid Fitness</footer>	Footer of the page or of a section.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #0f766e;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.

Declaration	What it does
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
min-height: 100vh;	At least as tall as the viewport.
display: grid;	Turns the element into a grid container.
grid-template-columns: 1fr;	Defines the columns of the grid.
grid-template-areas: "top" "side" "content" "bottom";	Names regions of the grid so children can be placed by name.
grid-area: top;	Places a child into a named area.
background: var(--brand);	Background colour or image.
padding: 1rem 1.5rem;	Space inside the element between its border and content.
font-size: 1.3rem;	Size of the text.
list-style: none;	Removes bullets or numbers from a list.
display: flex;	Turns the element into a flex container (one-dimensional layout).
flex-wrap: wrap;	Allows flex items to move to a new line when they do not fit.
gap: .5rem;	Space between grid or flex items without extra margins.
display: block;	Element starts on a new line and fills the width (used on links and images).
border-radius: 6px;	Rounds the corners.
text-decoration: none;	Removes the underline from links.
max-width: 50rem;	Limits how wide the element can grow, keeping lines readable.
border-top: 1px solid var(--line);	A top border used as an accent or separator.

Declaration	What it does
@media (min-width: 800px) {	Applies from the given width upwards (mobile-first breakpoint).
flex-direction: column;	Stacks flex items vertically.
position: sticky;	Scrolls normally until it reaches the given offset, then sticks.

Check your work

- Areas string has equal columns per row
- Anchor links jump to sections
- Sticky sidebar does not cover the footer
- Mobile shows links as a wrapped row

Exercises

1. Highlight the current section link with :target.
2. Add a right column for 'on this page'.
3. Collapse the sidebar with a checkbox toggle.

Theme data for this project

Field	Value
Business	Pyramid Fitness
Tagline	Train smarter, feel stronger
City	6th of October
Owner	Omar Farouk
Brand colour	#0f766e
Accent colour	#ecfdf5
Offers	Morning yoga (100 EGP); Strength circuit (120 EGP); Spinning (110 EGP); Personal training (350 EGP)

Project 354: Sidebar layout for Delta Dental Clinic

Theme: Delta Dental Clinic (Mansoura) | Level 2 | Files: index.html, styles.css

Brief

Build a documentation-style page: header, left sidebar of section links, content and footer, using named grid areas that rearrange at 800px.

Learning goals

- Use grid-template-areas for whole-page layout
- Change the areas in a media query
- Make the sidebar sticky on wide screens

Elements and CSS used

HTML elements	CSS features
div, header, nav, ul, li, a, main, section, footer	grid-template-areas, grid-area, @media (min-width), position: sticky, align-self: start

Build guide

1. Write the four regions inside a .layout div.
2. Give each region a grid-area name.
3. Mobile first: one column, areas stacked.
4. At 800px switch to two columns with side and content side by side.
5. Turn the sidebar link list into a column on desktop.
6. Make the sidebar sticky.

Project 354: index.html

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="utf-8">

Project 356 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Lotus Language School - Guide</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
	Generic block container for grouping and layout.
<header class="top"> Lotus Language School guide </header>	Introductory content: logo, title, navigation.
<nav class="side" aria-label="Sections">	A block of navigation links; aria-label names it for screen readers.
	Unordered (bulleted) list.
English A1	A hyperlink; href gives the destination.
French B1	One list item.
<main class="content">	The unique content of this page; exactly one per page.

Line	What it does
<section id="sEnglish A1"><h2>English A1</h2><p>Beginner, 8 weeks. ...	A thematic group of content, normally with its own heading.
<section id="sFrench B1"><h2>French B1</h2><p>Intermediate conversa...	Second-level heading for a section.
<section id="sGerman A2"><h2>German A2</h2><p>Grammar and speaking....	A paragraph of text.
<footer class="bottom">© 2026 Lotus Language School</footer>	Footer of the page or of a section.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #7c3aed;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.

Declaration	What it does
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
min-height: 100vh;	At least as tall as the viewport.
display: grid;	Turns the element into a grid container.
grid-template-columns: 1fr;	Defines the columns of the grid.
grid-template-areas: "top" "side" "content" "bottom";	Names regions of the grid so children can be placed by name.
grid-area: top;	Places a child into a named area.
background: var(--brand);	Background colour or image.
padding: 1rem 1.5rem;	Space inside the element between its border and content.
font-size: 1.3rem;	Size of the text.
list-style: none;	Removes bullets or numbers from a list.
display: flex;	Turns the element into a flex container (one-dimensional layout).
flex-wrap: wrap;	Allows flex items to move to a new line when they do not fit.
gap: .5rem;	Space between grid or flex items without extra margins.
display: block;	Element starts on a new line and fills the width (used on links and images).
border-radius: 6px;	Rounds the corners.
text-decoration: none;	Removes the underline from links.
max-width: 50rem;	Limits how wide the element can grow, keeping lines readable.
border-top: 1px solid var(--line);	A top border used as an accent or separator.

Declaration	What it does
@media (min-width: 800px) {	Applies from the given width upwards (mobile-first breakpoint).
flex-direction: column;	Stacks flex items vertically.
position: sticky;	Scrolls normally until it reaches the given offset, then sticks.

Check your work

- Areas string has equal columns per row
- Anchor links jump to sections
- Sticky sidebar does not cover the footer
- Mobile shows links as a wrapped row

Exercises

1. Highlight the current section link with :target.
2. Add a right column for 'on this page'.
3. Collapse the sidebar with a checkbox toggle.

Theme data for this project

Field	Value
Business	Lotus Language School
Tagline	Learn English, French and German in small groups
City	Alexandria
Owner	Nour El Din
Brand colour	#7c3aed
Accent colour	#f5f3ff
Offers	English A1 (1800 EGP); French B1 (2200 EGP); German A2 (2000 EGP); IELTS preparation (3000 EGP)

Project 357: Sidebar layout for Green Leaf Cafe

Theme: Green Leaf Cafe (Zamalek) | Level 2 | Files: index.html, styles.css

Brief

Build a documentation-style page: header, left sidebar of section links, content and footer, using named grid areas that rearrange at 800px.

Learning goals

- Use grid-template-areas for whole-page layout
- Change the areas in a media query
- Make the sidebar sticky on wide screens

Elements and CSS used

HTML elements	CSS features
div, header, nav, ul, li, a, main, section, footer	grid-template-areas, grid-area, @media (min-width), position: sticky, align-self: start

Build guide

1. Write the four regions inside a .layout div.
2. Give each region a grid-area name.
3. Mobile first: one column, areas stacked.
4. At 800px switch to two columns with side and content side by side.
5. Turn the sidebar link list into a column on desktop.
6. Make the sidebar sticky.

Project 357: index.html

```
<!DOCTYPE html>
