--brand: #166534;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.

Declaration	What it does
color: var(--ink);	Text colour.
min-height: 100vh;	At least as tall as the viewport.
display: grid;	Turns the element into a grid container.
grid-template-columns: 1fr;	Defines the columns of the grid.
grid-template-areas: "top" "side" "content" "bottom";	Names regions of the grid so children can be placed by name.
grid-area: top;	Places a child into a named area.
background: var(--brand);	Background colour or image.
padding: 1rem 1.5rem;	Space inside the element between its border and content.
font-size: 1.3rem;	Size of the text.
list-style: none;	Removes bullets or numbers from a list.
display: flex;	Turns the element into a flex container (one-dimensional layout).
flex-wrap: wrap;	Allows flex items to move to a new line when they do not fit.
gap: .5rem;	Space between grid or flex items without extra margins.
display: block;	Element starts on a new line and fills the width (used on links and images).
border-radius: 6px;	Rounds the corners.
text-decoration: none;	Removes the underline from links.
max-width: 50rem;	Limits how wide the element can grow, keeping lines readable.
border-top: 1px solid var(--line);	A top border used as an accent or separator.
@media (min-width: 800px) {	Applies from the given width upwards (mobile-first breakpoint).

Declaration	What it does
flex-direction: column;	Stacks flex items vertically.
position: sticky;	Scrolls normally until it reaches the given offset, then sticks.

Check your work

- Areas string has equal columns per row
- Anchor links jump to sections
- Sticky sidebar does not cover the footer
- Mobile shows links as a wrapped row

Exercises

1. Highlight the current section link with :target.
2. Add a right column for 'on this page'.
3. Collapse the sidebar with a checkbox toggle.

Theme data for this project

Field	Value
Business	Green Leaf Cafe
Tagline	Specialty coffee and quiet corners
City	Zamalek
Owner	Karim Said
Brand colour	#166534
Accent colour	#f0fdf4
Offers	Flat white (55 EGP); Cold brew (60 EGP); Hibiscus iced tea (40 EGP); Cheesecake (75 EGP)

Project 358: Sidebar layout for Sinai Trekking Club

Theme: Sinai Trekking Club (Saint Catherine) | Level 2 | Files: index.html, styles.css

Brief

Build a documentation-style page: header, left sidebar of section links, content and footer, using named grid areas that rearrange at 800px.

Learning goals

- Use grid-template-areas for whole-page layout
- Change the areas in a media query
- Make the sidebar sticky on wide screens

Elements and CSS used

HTML elements	CSS features
div, header, nav, ul, li, a, main, section, footer	grid-template-areas, grid-area, @media (min-width), position: sticky, align-self: start

Build guide

1. Write the four regions inside a .layout div.
2. Give each region a grid-area name.
3. Mobile first: one column, areas stacked.
4. At 800px switch to two columns with side and content side by side.
5. Turn the sidebar link list into a column on desktop.
6. Make the sidebar sticky.

Project 358: index.html

```

display: block;	Element starts on a new line and fills the width (used on links and images).
border-radius: 6px;	Rounds the corners.
text-decoration: none;	Removes the underline from links.
max-width: 50rem;	Limits how wide the element can grow, keeping lines readable.
border-top: 1px solid var(--line);	A top border used as an accent or separator.

Declaration	What it does
@media (min-width: 800px) {	Applies from the given width upwards (mobile-first breakpoint).
flex-direction: column;	Stacks flex items vertically.
position: sticky;	Scrolls normally until it reaches the given offset, then sticks.

Check your work

- Areas string has equal columns per row
- Anchor links jump to sections
- Sticky sidebar does not cover the footer
- Mobile shows links as a wrapped row

Exercises

1. Highlight the current section link with :target.
2. Add a right column for 'on this page'.
3. Collapse the sidebar with a checkbox toggle.

Theme data for this project

Field	Value
Business	Papyrus Stationery
Tagline	Notebooks, pens and paper made in Egypt
City	Heliopolis
Owner	Dina Fathy
Brand colour	#be185d
Accent colour	#fdf2f8
Offers	Dotted notebook (140 EGP); Fountain pen (350 EGP); Washi tape set (90 EGP); Desk planner (110 EGP)

Project 361: Sidebar layout for Oasis Plant Nursery

Theme: Oasis Plant Nursery (Sheikh Zayed) | Level 2 | Files: index.html, styles.css

Brief

Build a documentation-style page: header, left sidebar of section links, content and footer, using named grid areas that rearrange at 800px.

Learning goals

- Use grid-template-areas for whole-page layout
- Change the areas in a media query
- Make the sidebar sticky on wide screens

Elements and CSS used

HTML elements	CSS features
div, header, nav, ul, li, a, main, section, footer	grid-template-areas, grid-area, @media (min-width), position: sticky, align-self: start

Build guide

1. Write the four regions inside a .layout div.
2. Give each region a grid-area name.
3. Mobile first: one column, areas stacked.
4. At 800px switch to two columns with side and content side by side.
5. Turn the sidebar link list into a column on desktop.
6. Make the sidebar sticky.

Project 361: index.html

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1">
  <title>Oasis Plant Nursery - Guide</title>
  <link rel="stylesheet" href="styles.css">
</head>
<body>
  <div class="layout">
    <header class="top"><h1>Oasis Plant Nursery guide</h1></header>
    <nav class="side" aria-label="Sections">
      <ul>
    <li><a href="#sMonstera">Monstera</a></li>
    <li><a href="#sSnake plant">Snake plant</a></li>
    <li><a href="#sBasil pot">Basil pot</a></li>
    <li><a href="#sOlive tree">Olive tree</a></li>
      </ul>
    </nav>
    <main class="content">
      <section id="sMonstera"><h2>Monstera</h2><p>Large leaves, easy
care. Price: 250 EGP.</p></section>
      <section id="sSnake plant"><h2>Snake plant</h2><p>Survives
anything. Price: 120 EGP.</p></section>

```

Project 361 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Oasis Plant Nursery - Guide</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
	Generic block container for grouping and layout.
<header class="top"> Oasis Plant Nursery guide </header>	Introductory content: logo, title, navigation.
<nav class="side" aria-label="Sections">	A block of navigation links; aria-label names it for screen readers.
	Unordered (bulleted) list.
Monstera	A hyperlink; href gives the destination.
Snake plant	One list item.
<main class="content">	The unique content of this page; exactly one per page.

Line	What it does
<section id="sMonstera"><h2>Monstera</h2><p>Large leaves, easy care...	A thematic group of content, normally with its own heading.
<section id="sSnake plant"><h2>Snake plant</h2><p>Survives anything...	Second-level heading for a section.
<section id="sBasil pot"><h2>Basil pot</h2><p>Kitchen herb. Price: ...	A paragraph of text.
<footer class="bottom">© 2026 Oasis Plant Nursery</footer>	Footer of the page or of a section.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #15803d;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.

Declaration	What it does
color: var(--ink);	Text colour.
min-height: 100vh;	At least as tall as the viewport.
display: grid;	Turns the element into a grid container.
grid-template-columns: 1fr;	Defines the columns of the grid.
grid-template-areas: "top" "side" "content" "bottom";	Names regions of the grid so children can be placed by name.
grid-area: top;	Places a child into a named area.
background: var(--brand);	Background colour or image.
padding: 1rem 1.5rem;	Space inside the element between its border and content.
font-size: 1.3rem;	Size of the text.
list-style: none;	Removes bullets or numbers from a list.
display: flex;	Turns the element into a flex container (one-dimensional layout).
flex-wrap: wrap;	Allows flex items to move to a new line when they do not fit.
gap: .5rem;	Space between grid or flex items without extra margins.
display: block;	Element starts on a new line and fills the width (used on links and images).
border-radius: 6px;	Rounds the corners.
text-decoration: none;	Removes the underline from links.
max-width: 50rem;	Limits how wide the element can grow, keeping lines readable.
border-top: 1px solid var(--line);	A top border used as an accent or separator.
@media (min-width: 800px) {	Applies from the given width upwards (mobile-first breakpoint).

Declaration	What it does
flex-direction: column;	Stacks flex items vertically.
position: sticky;	Scrolls normally until it reaches the given offset, then sticks.

Check your work

- Areas string has equal columns per row

Project 364: Sidebar layout for Sahara Pet Care

Theme: Sahara Pet Care (New Cairo) | Level 2 | Files: index.html, styles.css

Brief

Build a documentation-style page: header, left sidebar of section links, content and footer, using named grid areas that rearrange at 800px.

Learning goals

- Use grid-template-areas for whole-page layout
- Change the areas in a media query
- Make the sidebar sticky on wide screens

Elements and CSS used

HTML elements	CSS features
div, header, nav, ul, li, a, main, section, footer	grid-template-areas, grid-area, @media (min-width), position: sticky, align-self: start

Build guide

1. Write the four regions inside a .layout div.
2. Give each region a grid-area name.
3. Mobile first: one column, areas stacked.
4. At 800px switch to two columns with side and content side by side.
5. Turn the sidebar link list into a column on desktop.
6. Make the sidebar sticky.

Project 364: index.html

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="utf-8">

}
```

Project 364 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Sahara Pet Care - Guide</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
	Generic block container for grouping and layout.
<header class="top"> Sahara Pet Care guide </header>	Introductory content: logo, title, navigation.
<nav class="side" aria-label="Sections">	A block of navigation links; aria-label names it for screen readers.
	Unordered (bulleted) list.
Full grooming	A hyperlink; href gives the destination.
Day boarding	One list item.

Line	What it does
<main class="content">	The unique content of this page; exactly one per page.
<section id="sFull grooming"><h2>Full grooming</h2><p>Bath, cut and...	A thematic group of content, normally with its own heading.
<section id="sDay boarding"><h2>Day boarding</h2><p>Play and rest. ...	Second-level heading for a section.
<section id="sVaccination"><h2>Vaccination</h2><p>Annual boosters. ...	A paragraph of text.
<footer class="bottom">© 2026 Sahara Pet Care</footer>	Footer of the page or of a section.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #c2410c;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.

Declaration	What it does
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
min-height: 100vh;	At least as tall as the viewport.
display: grid;	Turns the element into a grid container.
grid-template-columns: 1fr;	Defines the columns of the grid.
grid-template-areas: "top" "side" "content" "bottom";	Names regions of the grid so children can be placed by name.
grid-area: top;	Places a child into a named area.
background: var(--brand);	Background colour or image.
padding: 1rem 1.5rem;	Space inside the element between its border and content.
font-size: 1.3rem;	Size of the text.
list-style: none;	Removes bullets or numbers from a list.
display: flex;	Turns the element into a flex container (one-dimensional layout).
flex-wrap: wrap;	Allows flex items to move to a new line when they do not fit.
gap: .5rem;	Space between grid or flex items without extra margins.
display: block;	Element starts on a new line and fills the width (used on links and images).
border-radius: 6px;	Rounds the corners.
text-decoration: none;	Removes the underline from links.
max-width: 50rem;	Limits how wide the element can grow, keeping lines readable.
border-top: 1px solid var(--line);	A top border used as an accent or separator.

Declaration	What it does
@media (min-width: 800px) {	Applies from the given width upwards (mobile-first breakpoint).
flex-direction: column;	Stacks flex items vertically.
position: sticky;	Scrolls normally until it reaches the given offset, then sticks.

Check your work

- Areas string has equal columns per row
- Anchor links jump to sections
- Sticky sidebar does not cover the footer
- Mobile shows links as a wrapped row

Exercises

1. Highlight the current section link with :target.
2. Add a right column for 'on this page'.
3. Collapse the sidebar with a checkbox toggle.

Theme data for this project

Field	Value
Business	Sahara Pet Care
Tagline	Grooming, boarding and vet visits
City	New Cairo
Owner	Rana Ibrahim
Brand colour	#c2410c
Accent colour	#fff7ed
Offers	Full grooming (400 EGP); Day boarding (250 EGP); Vaccination (300 EGP); Dog walking (100 EGP)

Project 365: Sidebar layout for Alexandria Sailing School

Theme: Alexandria Sailing School (Alexandria) | Level 2 | Files: index.html, styles.css

Brief

Build a documentation-style page: header, left sidebar of section links, content and footer, using named grid areas that rearrange at 800px.

Learning goals

- Use grid-template-areas for whole-page layout
- Change the areas in a media query
- Make the sidebar sticky on wide screens

Elements and CSS used

HTML elements	CSS features
div, header, nav, ul, li, a, main, section, footer	grid-template-areas, grid-area, @media (min-width), position: sticky, align-self: start

Build guide

1. Write the four regions inside a .layout div.
2. Give each region a grid-area name.
3. Mobile first: one column, areas stacked.
4. At 800px switch to two columns with side and content side by side.
5. Turn the sidebar link list into a column on desktop.
6. Make the sidebar sticky.

Project 367 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Fayoum Pottery Studio - Guide</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
	Generic block container for grouping and layout.
<header class="top"> Fayoum Pottery Studio guide </header>	Introductory content: logo, title, navigation.
<nav class="side" aria-label="Sections">	A block of navigation links; aria-label names it for screen readers.
	Unordered (bulleted) list.
Intro to the wheel	A hyperlink; href gives the destination.
Glazing day	One list item.

Line	What it does
<main class="content">	The unique content of this page; exactly one per page.
<section id="sIntro to the wheel"><h2>Intro to the wheel</h2><p>Thr...	A thematic group of content, normally with its own heading.
<section id="sGlazing day"><h2>Glazing day</h2><p>Colour your piece...	Second-level heading for a section.
<section id="sKids clay class"><h2>Kids clay class</h2><p>Ages 6 to...	A paragraph of text.
<footer class="bottom">© 2026 Fayoum Pottery Studio</footer>	Footer of the page or of a section.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #9a3412;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.

Declaration	What it does
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
min-height: 100vh;	At least as tall as the viewport.
display: grid;	Turns the element into a grid container.
grid-template-columns: 1fr;	Defines the columns of the grid.
grid-template-areas: "top" "side" "content" "bottom";	Names regions of the grid so children can be placed by name.
grid-area: top;	Places a child into a named area.
background: var(--brand);	Background colour or image.
padding: 1rem 1.5rem;	Space inside the element between its border and content.
font-size: 1.3rem;	Size of the text.
list-style: none;	Removes bullets or numbers from a list.
display: flex;	Turns the element into a flex container (one-dimensional layout).
flex-wrap: wrap;	Allows flex items to move to a new line when they do not fit.
gap: .5rem;	Space between grid or flex items without extra margins.
display: block;	Element starts on a new line and fills the width (used on links and images).
border-radius: 6px;	Rounds the corners.
text-decoration: none;	Removes the underline from links.
max-width: 50rem;	Limits how wide the element can grow, keeping lines readable.
border-top: 1px solid var(--line);	A top border used as an accent or separator.

Declaration	What it does
@media (min-width: 800px) {	Applies from the given width upwards (mobile-first breakpoint).
flex-direction: column;	Stacks flex items vertically.
position: sticky;	Scrolls normally until it reaches the given offset, then sticks.

Check your work

- Areas string has equal columns per row
- Anchor links jump to sections
- Sticky sidebar does not cover the footer
- Mobile shows links as a wrapped row

Exercises

1. Highlight the current section link with :target.
2. Add a right column for 'on this page'.
3. Collapse the sidebar with a checkbox toggle.

Theme data for this project

Field	Value
Business	Fayoum Pottery Studio
Tagline	Wheel throwing and glazing classes
City	Tunis Village
Owner	Ahmed Mahmoud
Brand colour	#9a3412
Accent colour	#fff7ed
Offers	Intro to the wheel (450 EGP); Glazing day (300 EGP); Kids clay class (200 EGP); Weekend retreat (2500 EGP)

Project 368: Sidebar layout for Cleopatra Beauty Salon

Theme: Cleopatra Beauty Salon (Dokki) | Level 2 | Files: index.html, styles.css

Brief

Build a documentation-style page: header, left sidebar of section links, content and footer, using named grid areas that rearrange at 800px.

Learning goals

- Use grid-template-areas for whole-page layout
- Change the areas in a media query
- Make the sidebar sticky on wide screens

Elements and CSS used

HTML elements	CSS features
div, header, nav, ul, li, a, main, section, footer	grid-template-areas, grid-area, @media (min-width), position: sticky, align-self: start

Build guide

1. Write the four regions inside a .layout div.
2. Give each region a grid-area name.
3. Mobile first: one column, areas stacked.
4. At 800px switch to two columns with side and content side by side.
5. Turn the sidebar link list into a column on desktop.
6. Make the sidebar sticky.

Project 368: index.html

```

Project 370 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Luxor Music Academy - Guide</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
	Generic block container for grouping and layout.
<header class="top"> Luxor Music Academy guide </header>	Introductory content: logo, title, navigation.
<nav class="side" aria-label="Sections">	A block of navigation links; aria-label names it for screen readers.
	Unordered (bulleted) list.
Oud for beginners	A hyperlink; href gives the destination.
Piano grade 1	One list item.

Line	What it does
<main class="content">	The unique content of this page; exactly one per page.
<section id="sOud for beginners"><h2>Oud for beginners</h2><p>Eight...	A thematic group of content, normally with its own heading.
<section id="sPiano grade 1"><h2>Piano grade 1</h2><p>Theory and pr...	Second-level heading for a section.
<section id="sGuitar chords"><h2>Guitar chords</h2><p>Play songs in...	A paragraph of text.
<footer class="bottom">© 2026 Luxor Music Academy</footer>	Footer of the page or of a section.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #4c1d95;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.

Declaration	What it does
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
min-height: 100vh;	At least as tall as the viewport.
display: grid;	Turns the element into a grid container.
grid-template-columns: 1fr;	Defines the columns of the grid.
grid-template-areas: "top" "side" "content" "bottom";	Names regions of the grid so children can be placed by name.
grid-area: top;	Places a child into a named area.
background: var(--brand);	Background colour or image.
padding: 1rem 1.5rem;	Space inside the element between its border and content.
font-size: 1.3rem;	Size of the text.
list-style: none;	Removes bullets or numbers from a list.
display: flex;	Turns the element into a flex container (one-dimensional layout).
flex-wrap: wrap;	Allows flex items to move to a new line when they do not fit.
gap: .5rem;	Space between grid or flex items without extra margins.
display: block;	Element starts on a new line and fills the width (used on links and images).
border-radius: 6px;	Rounds the corners.
text-decoration: none;	Removes the underline from links.
max-width: 50rem;	Limits how wide the element can grow, keeping lines readable.
border-top: 1px solid var(--line);	A top border used as an accent or separator.

Declaration	What it does
@media (min-width: 800px) {	Applies from the given width upwards (mobile-first breakpoint).
flex-direction: column;	Stacks flex items vertically.
position: sticky;	Scrolls normally until it reaches the given offset, then sticks.

Check your work

- Areas string has equal columns per row
- Anchor links jump to sections
- Sticky sidebar does not cover the footer
- Mobile shows links as a wrapped row

Exercises

1. Highlight the current section link with :target.
2. Add a right column for 'on this page'.
3. Collapse the sidebar with a checkbox toggle.

Theme data for this project

Field	Value
Business	Luxor Music Academy
Tagline	Oud, piano, guitar and voice lessons
City	Luxor
Owner	Salma Ragab
Brand colour	#4c1d95
Accent colour	#f5f3ff
Offers	Oud for beginners (1600 EGP); Piano grade 1 (1800 EGP); Guitar chords (1400 EGP); Voice coaching (1500 EGP)

Project 371: Sidebar layout for Port Said Seafood

Theme: Port Said Seafood (Port Said) | Level 2 | Files: index.html, styles.css

Brief

Build a documentation-style page: header, left sidebar of section links, content and footer, using named grid areas that rearrange at 800px.

Learning goals

- Use grid-template-areas for whole-page layout
- Change the areas in a media query
- Make the sidebar sticky on wide screens

Elements and CSS used

HTML elements	CSS features
div, header, nav, ul, li, a, main, section, footer	grid-template-areas, grid-area, @media (min-width), position: sticky, align-self: start

Build guide

1. Write the four regions inside a .layout div.
2. Give each region a grid-area name.
3. Mobile first: one column, areas stacked.
4. At 800px switch to two columns with side and content side by side.
5. Turn the sidebar link list into a column on desktop.
6. Make the sidebar sticky.

Project 371: index.html

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="utf-8">

Project 373 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Nubian Guest House - Guide</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
	Generic block container for grouping and layout.
<header class="top"> Nubian Guest House guide </header>	Introductory content: logo, title, navigation.
<nav class="side" aria-label="Sections">	A block of navigation links; aria-label names it for screen readers.
	Unordered (bulleted) list.
Garden room	A hyperlink; href gives the destination.
Nile view suite	One list item.

Line	What it does
<main class="content">	The unique content of this page; exactly one per page.
<section id="sGarden room"><h2>Garden room</h2><p>Double bed, share...	A thematic group of content, normally with its own heading.
<section id="sNile view suite"><h2>Nile view suite</h2><p>Balcony a...	Second-level heading for a section.
<section id="sFamily room"><h2>Family room</h2><p>Sleeps four. Pric...	A paragraph of text.
<footer class="bottom">© 2026 Nubian Guest House</footer>	Footer of the page or of a section.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #b45309;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.

Declaration	What it does
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
min-height: 100vh;	At least as tall as the viewport.
display: grid;	Turns the element into a grid container.
grid-template-columns: 1fr;	Defines the columns of the grid.
grid-template-areas: "top" "side" "content" "bottom";	Names regions of the grid so children can be placed by name.
grid-area: top;	Places a child into a named area.
background: var(--brand);	Background colour or image.
padding: 1rem 1.5rem;	Space inside the element between its border and content.
font-size: 1.3rem;	Size of the text.
list-style: none;	Removes bullets or numbers from a list.
display: flex;	Turns the element into a flex container (one-dimensional layout).
flex-wrap: wrap;	Allows flex items to move to a new line when they do not fit.
gap: .5rem;	Space between grid or flex items without extra margins.
display: block;	Element starts on a new line and fills the width (used on links and images).
border-radius: 6px;	Rounds the corners.
text-decoration: none;	Removes the underline from links.
max-width: 50rem;	Limits how wide the element can grow, keeping lines readable.
border-top: 1px solid var(--line);	A top border used as an accent or separator.

Declaration	What it does
@media (min-width: 800px) {	Applies from the given width upwards (mobile-first breakpoint).
flex-direction: column;	Stacks flex items vertically.
position: sticky;	Scrolls normally until it reaches the given offset, then sticks.

Check your work

- Areas string has equal columns per row
- Anchor links jump to sections
- Sticky sidebar does not cover the footer
- Mobile shows links as a wrapped row

Exercises

1. Highlight the current section link with :target.
2. Add a right column for 'on this page'.
3. Collapse the sidebar with a checkbox toggle.

Theme data for this project

Field	Value
Business	Nubian Guest House
Tagline	Colourful rooms on the west bank of the Nile
City	Aswan
Owner	Fatma Hassan
Brand colour	#b45309
Accent colour	#fffbeb
Offers	Garden room (900 EGP); Nile view suite (1800 EGP); Family room (1500 EGP); Rooftop dorm (300 EGP)

Project 374: Sidebar layout for Ismailia Cycling Store

Theme: Ismailia Cycling Store (Ismailia) | Level 2 | Files: index.html, styles.css

Brief

Build a documentation-style page: header, left sidebar of section links, content and footer, using named grid areas that rearrange at 800px.

Learning goals

- Use grid-template-areas for whole-page layout
- Change the areas in a media query
- Make the sidebar sticky on wide screens

Elements and CSS used

HTML elements	CSS features
div, header, nav, ul, li, a, main, section, footer	grid-template-areas, grid-area, @media (min-width), position: sticky, align-self: start

Build guide

1. Write the four regions inside a .layout div.
2. Give each region a grid-area name.
3. Mobile first: one column, areas stacked.
4. At 800px switch to two columns with side and content side by side.
5. Turn the sidebar link list into a column on desktop.
6. Make the sidebar sticky.

Project 374: index.html

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1">

Project type: Login form

Level 1 | 25 projects, one per theme

Build a compact sign-in card with email, password, remember-me checkbox and a link, using the correct autocomplete tokens so password managers work.

Project 376: Login form for Cairo Book Shop

Theme: Cairo Book Shop (Giza) | Level 1 | Files: index.html, styles.css

Brief

Build a compact sign-in card with email, password, remember-me checkbox and a link, using the correct autocomplete tokens so password managers work.

Learning goals

- Use autocomplete="username" and "current-password"
- Wrap a checkbox in its label
- Size a card with min()

Elements and CSS used

HTML elements	CSS features
form, h1, label, input, button, p, a	width: min(), box-shadow, :not(), display: flex, align-items

Build guide

1. Write the form with labels before each input.
2. Add autocomplete tokens and minlength on the password.
3. Wrap the checkbox inside its label.
4. Make the form a grid with small gaps.
5. Exclude the checkbox from the input styling with :not([type=checkbox]).
6. Centre the card.

Project 376: index.html

```

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #b90000;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
min-height: 100vh;	At least as tall as the viewport.
display: grid;	Turns the element into a grid container.

Declaration	What it does
place-items: center;	Centres items horizontally and vertically in a grid.
background: var(--accent);	Background colour or image.
padding: 1rem;	Space inside the element between its border and content.
width: min(100%, 22rem);	Uses the smaller of the listed values.
border-radius: 14px;	Rounds the corners.
box-shadow: 0 8px 24px rgb(0 0 0 / 10%);	Soft shadow that lifts the element from the page.
gap: .4rem;	Space between grid or flex items without extra margins.
font-size: 1.3rem;	Size of the text.
text-align: center;	Centres inline content such as text.
font-weight: 600;	Thickness of the text.
input:not([type="checkbox"]) {	Excludes elements from a selector.
border: 1px solid #bbb;	Changes the visual order of a flex item without changing the source.
border-radius: 8px;	The line around the element: width, style and colour.
font: inherit;	Makes form controls use the page font instead of the browser default.
display: flex;	Turns the element into a flex container (one-dimensional layout).
align-items: center;	Centres items on the cross axis.
border: 0;	Removes the default border (for example on an iframe or button).
cursor: pointer;	Shows the hand cursor to indicate something clickable.

Check your work

- Browser offers to save the password
- Checkbox label is clickable
- Card never wider than 22rem
- Password minimum length enforced

Exercises

1. Add a show/hide password button.
2. Add a 'Sign in with...' divider using ::before/::after lines.
3. Show a friendly error message region with aria-live.

Theme data for this project

Field	Value
Business	Cairo Book Shop
Tagline	PDF and printed books about web development
City	Giza
Owner	Mohamed Khattab
Brand colour	#b90000
Accent colour	#f4f1ea
Offers	Learn HTML (120 EGP); CSS in Practice (150 EGP); JavaScript Basics (180 EGP); Web Accessibility (95 EGP)

Project 377: Login form for Nile Bakery

Theme: Nile Bakery (Cairo) | Level 1 | Files: index.html, styles.css

Brief

Build a compact sign-in card with email, password, remember-me checkbox and a link, using the correct autocomplete tokens so password managers work.

Learning goals

- Use autocomplete="username" and "current-password"
- Wrap a checkbox in its label
- Size a card with min()

Elements and CSS used

HTML elements	CSS features
form, h1, label, input, button, p, a	width: min(), box-shadow, :not(), display: flex, align-items

Build guide

1. Write the form with labels before each input.
2. Add autocomplete tokens and minlength on the password.
3. Wrap the checkbox inside its label.
4. Make the form a grid with small gaps.
5. Exclude the checkbox from the input styling with :not([type=checkbox]).
6. Centre the card.

Project 377: index.html

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1">
  <title>Nile Bakery - Sign in</title>
  <link rel="stylesheet" href="styles.css">
</head>
<body>
  <main>
    <form class="login" action="/login" method="post">
      <h1>Sign in to Nile Bakery</h1>
      <label for="user">Email</label>
      <input id="user" name="email" type="email" required
autocomplete="username">
      <label for="pass">Password</label>
      <input id="pass" name="password" type="password" required
minlength="8" autocomplete="current-password">
      <label class="check"><input type="checkbox" name="remember">
Remember me</label>
      <button type="submit">Sign in</button>
      <p><a href="forgot.html">Forgot your password?</a></p>
    </form>
  </main>
</body>

Project 380 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Red Sea Travel - Sign in</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
<form class="login" action="/login" method="post">	A form; action is where the data goes, method how it is sent.
Sign in to Red Sea Travel	The main heading; only one per page.
<label for="user">Email</label>	Text label for a control; for matches the control's id, or the label wraps the control.
<input id="user" name="email" type="email" required autocomplete="u...	Email field: validated automatically and shows the @ keyboard on phones.
<input id="pass" name="password" type="password" required minlength...	Password field: characters are hidden.

Line	What it does
<label class="check"><input type="checkbox" name="remember"> Rememb...	Checkbox: on or off.
<button type="submit">Sign in</button>	A clickable button; inside a form it submits by default.
Forgot your password?	A paragraph of text.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #0369a1;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
min-height: 100vh;	At least as tall as the viewport.
display: grid;	Turns the element into a grid container.

Declaration	What it does
place-items: center;	Centres items horizontally and vertically in a grid.
background: var(--accent);	Background colour or image.
padding: 1rem;	Space inside the element between its border and content.
width: min(100%, 22rem);	Uses the smaller of the listed values.
border-radius: 14px;	Rounds the corners.
box-shadow: 0 8px 24px rgb(0 0 0 / 10%);	Soft shadow that lifts the element from the page.
gap: .4rem;	Space between grid or flex items without extra margins.
font-size: 1.3rem;	Size of the text.
text-align: center;	Centres inline content such as text.
font-weight: 600;	Thickness of the text.
input:not([type="checkbox"]) {	Excludes elements from a selector.
border: 1px solid #bbb;	Changes the visual order of a flex item without changing the source.
border-radius: 8px;	The line around the element: width, style and colour.
font: inherit;	Makes form controls use the page font instead of the browser default.
display: flex;	Turns the element into a flex container (one-dimensional layout).
align-items: center;	Centres items on the cross axis.
border: 0;	Removes the default border (for example on an iframe or button).
cursor: pointer;	Shows the hand cursor to indicate something clickable.

Check your work

- Browser offers to save the password
- Checkbox label is clickable
- Card never wider than 22rem
- Password minimum length enforced

Exercises

1. Add a show/hide password button.
2. Add a 'Sign in with...' divider using ::before/::after lines.
3. Show a friendly error message region with aria-live.

Theme data for this project

Field	Value
Business	Red Sea Travel
Tagline	Discover Egypt from desert to reef
City	Hurghada
Owner	Laila Mansour
Brand colour	#0369a1
Accent colour	#f0f9ff
Offers	Luxor day trip (1200 EGP); Snorkelling (700 EGP); Desert safari (900 EGP); Nile cruise (6500 EGP)

Project 381: Login form for Lotus Language School

Theme: Lotus Language School (Alexandria) | Level 1 | Files: index.html, styles.css

Brief

Build a compact sign-in card with email, password, remember-me checkbox and a link, using the correct autocomplete tokens so password managers work.

Learning goals

- Use autocomplete="username" and "current-password"
- Wrap a checkbox in its label
- Size a card with min()

Elements and CSS used

HTML elements	CSS features
form, h1, label, input, button, p, a	width: min(), box-shadow, :not(), display: flex, align-items

Build guide

1. Write the form with labels before each input.
2. Add autocomplete tokens and minlength on the password.
3. Wrap the checkbox inside its label.
4. Make the form a grid with small gaps.
5. Exclude the checkbox from the input styling with :not([type=checkbox]).
6. Centre the card.

Declaration	What it does
place-items: center;	Centres items horizontally and vertically in a grid.
background: var(--accent);	Background colour or image.
padding: 1rem;	Space inside the element between its border and content.
width: min(100%, 22rem);	Uses the smaller of the listed values.
border-radius: 14px;	Rounds the corners.
box-shadow: 0 8px 24px rgb(0 0 0 / 10%);	Soft shadow that lifts the element from the page.
gap: .4rem;	Space between grid or flex items without extra margins.
font-size: 1.3rem;	Size of the text.
text-align: center;	Centres inline content such as text.
font-weight: 600;	Thickness of the text.
input:not([type="checkbox"]) {	Excludes elements from a selector.
border: 1px solid #bbb;	Changes the visual order of a flex item without changing the source.
border-radius: 8px;	The line around the element: width, style and colour.
font: inherit;	Makes form controls use the page font instead of the browser default.
display: flex;	Turns the element into a flex container (one-dimensional layout).
align-items: center;	Centres items on the cross axis.
border: 0;	Removes the default border (for example on an iframe or button).
cursor: pointer;	Shows the hand cursor to indicate something clickable.

Check your work

- Browser offers to save the password
- Checkbox label is clickable
- Card never wider than 22rem
- Password minimum length enforced

Exercises

1. Add a show/hide password button.
2. Add a 'Sign in with…' divider using ::before/::after lines.
3. Show a friendly error message region with aria-live.

Theme data for this project

Field	Value
Business	Sinai Trekking Club
Tagline	Guided mountain walks for every level
City	Saint Catherine
Owner	Yara Hamdy
Brand colour	#92400e
Accent colour	#fffbeb
Offers	Mount Sinai sunrise (400 EGP); Blue Desert loop (250 EGP); Wadi Gnai (300 EGP); Three-day traverse (1900 EGP)

Project 384: Login form for Horizon Photography

Theme: Horizon Photography (Maadi) | Level 1 | Files: index.html, styles.css

Brief

Build a compact sign-in card with email, password, remember-me checkbox and a link, using the correct autocomplete tokens so password managers work.

Learning goals

- Use autocomplete="username" and "current-password"
- Wrap a checkbox in its label
- Size a card with min()

Elements and CSS used

HTML elements	CSS features
form, h1, label, input, button, p, a	width: min(), box-shadow, :not(), display: flex, align-items

Build guide

1. Write the form with labels before each input.
2. Add autocomplete tokens and minlength on the password.
3. Wrap the checkbox inside its label.
4. Make the form a grid with small gaps.
5. Exclude the checkbox from the input styling with :not([type=checkbox]).
6. Centre the card.

Project 384: index.html

```
<!DOCTYPE html>

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Horizon Photography - Sign in</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
<form class="login" action="/login" method="post">	A form; action is where the data goes, method how it is sent.
Sign in to Horizon Photography	The main heading; only one per page.
<label for="user">Email</label>	Text label for a control; for matches the control's id, or the label wraps the control.
<input id="user" name="email" type="email" required autocomplete="u...	Email field: validated automatically and shows the @ keyboard on phones.
<input id="pass" name="password" type="password" required minlength...	Password field: characters are hidden.

Line	What it does
<label class="check"><input type="checkbox" name="remember"> Rememb...	Checkbox: on or off.
<button type="submit">Sign in</button>	A clickable button; inside a form it submits by default.
Forgot your password?	A paragraph of text.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #111827;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
min-height: 100vh;	At least as tall as the viewport.
display: grid;	Turns the element into a grid container.

Declaration	What it does
place-items: center;	Centres items horizontally and vertically in a grid.
background: var(--accent);	Background colour or image.
padding: 1rem;	Space inside the element between its border and content.
width: min(100%, 22rem);	Uses the smaller of the listed values.
border-radius: 14px;	Rounds the corners.
box-shadow: 0 8px 24px rgb(0 0 0 / 10%);	Soft shadow that lifts the element from the page.
gap: .4rem;	Space between grid or flex items without extra margins.
font-size: 1.3rem;	Size of the text.
text-align: center;	Centres inline content such as text.
font-weight: 600;	Thickness of the text.
input:not([type="checkbox"]) {	Excludes elements from a selector.
border: 1px solid #bbb;	Changes the visual order of a flex item without changing the source.
border-radius: 8px;	The line around the element: width, style and colour.
font: inherit;	Makes form controls use the page font instead of the browser default.
display: flex;	Turns the element into a flex container (one-dimensional layout).
align-items: center;	Centres items on the cross axis.
border: 0;	Removes the default border (for example on an iframe or button).
cursor: pointer;	Shows the hand cursor to indicate something clickable.

Check your work

Project 387 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Cedar Furniture - Sign in</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
<form class="login" action="/login" method="post">	A form; action is where the data goes, method how it is sent.
Sign in to Cedar Furniture	The main heading; only one per page.
<label for="user">Email</label>	Text label for a control; for matches the control's id, or the label wraps the control.
<input id="user" name="email" type="email" required autocomplete="u...	Email field: validated automatically and shows the @ keyboard on phones.
<input id="pass" name="password" type="password" required minlength...	Password field: characters are hidden.

Line	What it does
<label class="check"><input type="checkbox" name="remember"> Rememb...	Checkbox: on or off.
<button type="submit">Sign in</button>	A clickable button; inside a form it submits by default.
Forgot your password?	A paragraph of text.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #78350f;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
min-height: 100vh;	At least as tall as the viewport.
display: grid;	Turns the element into a grid container.

Declaration	What it does
place-items: center;	Centres items horizontally and vertically in a grid.
background: var(--accent);	Background colour or image.
padding: 1rem;	Space inside the element between its border and content.
width: min(100%, 22rem);	Uses the smaller of the listed values.
border-radius: 14px;	Rounds the corners.
box-shadow: 0 8px 24px rgb(0 0 0 / 10%);	Soft shadow that lifts the element from the page.
gap: .4rem;	Space between grid or flex items without extra margins.
font-size: 1.3rem;	Size of the text.
text-align: center;	Centres inline content such as text.
font-weight: 600;	Thickness of the text.
input:not([type="checkbox"]) {	Excludes elements from a selector.
border: 1px solid #bbb;	Changes the visual order of a flex item without changing the source.
border-radius: 8px;	The line around the element: width, style and colour.
font: inherit;	Makes form controls use the page font instead of the browser default.
display: flex;	Turns the element into a flex container (one-dimensional layout).
align-items: center;	Centres items on the cross axis.
border: 0;	Removes the default border (for example on an iframe or button).
cursor: pointer;	Shows the hand cursor to indicate something clickable.

Check your work

- Browser offers to save the password
- Checkbox label is clickable
- Card never wider than 22rem
- Password minimum length enforced

Exercises

1. Add a show/hide password button.
2. Add a 'Sign in with...' divider using ::before/::after lines.
3. Show a friendly error message region with aria-live.

Theme data for this project

Field	Value
Business	Cedar Furniture
Tagline	Solid wood furniture made to order
City	Damietta
Owner	Tarek Lotfy
Brand colour	#78350f
Accent colour	#fef3c7
Offers	Oak dining table (9500 EGP); Bookshelf (4200 EGP); Bedside table (1500 EGP); Coffee table (2800 EGP)

Project 388: Login form for Byte Repair

Theme: Byte Repair (Nasr City) | Level 1 | Files: index.html, styles.css

Brief

Build a compact sign-in card with email, password, remember-me checkbox and a link, using the correct autocomplete tokens so password managers work.

Learning goals

- Use autocomplete="username" and "current-password"
- Wrap a checkbox in its label
- Size a card with min()

Elements and CSS used

HTML elements	CSS features
form, h1, label, input, button, p, a	width: min(), box-shadow, :not(), display: flex, align-items

Build guide

1. Write the form with labels before each input.
2. Add autocomplete tokens and minlength on the password.
3. Wrap the checkbox inside its label.
4. Make the form a grid with small gaps.
5. Exclude the checkbox from the input styling with :not([type=checkbox]).
6. Centre the card.

align-items: center;	Centres items on the cross axis.
border: 0;	Removes the default border (for example on an iframe or button).
cursor: pointer;	Shows the hand cursor to indicate something clickable.

Check your work

- Browser offers to save the password
- Checkbox label is clickable
- Card never wider than 22rem
- Password minimum length enforced

Exercises

1. Add a show/hide password button.
2. Add a 'Sign in with...' divider using ::before/::after lines.
3. Show a friendly error message region with aria-live.

Theme data for this project

Field	Value
Business	Alexandria Sailing School
Tagline	Learn to sail on the Mediterranean
City	Alexandria
Owner	Amr Selim
Brand colour	#1e40af
Accent colour	#eff6ff
Offers	Taster session (500 EGP); Beginner course (2200 EGP); Racing clinic (1800 EGP); Private lesson (900 EGP)

Project 391: Login form for Habiba Handmade Jewellery

Theme: Habiba Handmade Jewellery (Aswan) | Level 1 | Files: index.html, styles.css

Brief

Build a compact sign-in card with email, password, remember-me checkbox and a link, using the correct autocomplete tokens so password managers work.

Learning goals

- Use autocomplete="username" and "current-password"
- Wrap a checkbox in its label
- Size a card with min()

Elements and CSS used

HTML elements	CSS features
form, h1, label, input, button, p, a	width: min(), box-shadow, :not(), display: flex, align-items

Build guide

1. Write the form with labels before each input.
2. Add autocomplete tokens and minlength on the password.
3. Wrap the checkbox inside its label.
4. Make the form a grid with small gaps.
5. Exclude the checkbox from the input styling with :not([type=checkbox]).
6. Centre the card.

Project 391: index.html

```
<!DOCTYPE html>

Project 391 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Habiba Handmade Jewellery - Sign in</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
<form class="login" action="/login" method="post">	A form; action is where the data goes, method how it is sent.
Sign in to Habiba Handmade Jewellery	The main heading; only one per page.
<label for="user">Email</label>	Text label for a control; for matches the control's id, or the label wraps the control.
<input id="user" name="email" type="email" required autocomplete="u...	Email field: validated automatically and shows the @ keyboard on phones.
<input id="pass" name="password" type="password" required minlength...	Password field: characters are hidden.

Line	What it does
<label class="check"><input type="checkbox" name="remember"> Rememb...	Checkbox: on or off.
<button type="submit">Sign in</button>	A clickable button; inside a form it submits by default.
Forgot your password?	A paragraph of text.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #a16207;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
min-height: 100vh;	At least as tall as the viewport.
display: grid;	Turns the element into a grid container.

Declaration	What it does
place-items: center;	Centres items horizontally and vertically in a grid.
background: var(--accent);	Background colour or image.
padding: 1rem;	Space inside the element between its border and content.
width: min(100%, 22rem);	Uses the smaller of the listed values.
border-radius: 14px;	Rounds the corners.
box-shadow: 0 8px 24px rgb(0 0 0 / 10%);	Soft shadow that lifts the element from the page.
gap: .4rem;	Space between grid or flex items without extra margins.
font-size: 1.3rem;	Size of the text.
text-align: center;	Centres inline content such as text.
font-weight: 600;	Thickness of the text.
input:not([type="checkbox"]) {	Excludes elements from a selector.
border: 1px solid #bbb;	Changes the visual order of a flex item without changing the source.
border-radius: 8px;	The line around the element: width, style and colour.
font: inherit;	Makes form controls use the page font instead of the browser default.
display: flex;	Turns the element into a flex container (one-dimensional layout).
align-items: center;	Centres items on the cross axis.
border: 0;	Removes the default border (for example on an iframe or button).
cursor: pointer;	Shows the hand cursor to indicate something clickable.

Check your work

- Browser offers to save the password
- Checkbox label is clickable
- Card never wider than 22rem
- Password minimum length enforced

Exercises

1. Add a show/hide password button.
2. Add a 'Sign in with...' divider using ::before/::after lines.
3. Show a friendly error message region with aria-live.

Project 394 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Suez Auto Service - Sign in</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
<form class="login" action="/login" method="post">	A form; action is where the data goes, method how it is sent.
Sign in to Suez Auto Service	The main heading; only one per page.
<label for="user">Email</label>	Text label for a control; for matches the control's id, or the label wraps the control.
<input id="user" name="email" type="email" required autocomplete="u...	Email field: validated automatically and shows the @ keyboard on phones.
<input id="pass" name="password" type="password" required minlength...	Password field: characters are hidden.

Line	What it does
<label class="check"><input type="checkbox" name="remember"> Rememb...	Checkbox: on or off.
<button type="submit">Sign in</button>	A clickable button; inside a form it submits by default.
Forgot your password?	A paragraph of text.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #374151;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
min-height: 100vh;	At least as tall as the viewport.
display: grid;	Turns the element into a grid container.

Declaration	What it does
place-items: center;	Centres items horizontally and vertically in a grid.
background: var(--accent);	Background colour or image.
padding: 1rem;	Space inside the element between its border and content.
width: min(100%, 22rem);	Uses the smaller of the listed values.
border-radius: 14px;	Rounds the corners.
box-shadow: 0 8px 24px rgb(0 0 0 / 10%);	Soft shadow that lifts the element from the page.
gap: .4rem;	Space between grid or flex items without extra margins.
font-size: 1.3rem;	Size of the text.
text-align: center;	Centres inline content such as text.
font-weight: 600;	Thickness of the text.
input:not([type="checkbox"]) {	Excludes elements from a selector.
border: 1px solid #bbb;	Changes the visual order of a flex item without changing the source.
border-radius: 8px;	The line around the element: width, style and colour.
font: inherit;	Makes form controls use the page font instead of the browser default.
display: flex;	Turns the element into a flex container (one-dimensional layout).
align-items: center;	Centres items on the cross axis.
border: 0;	Removes the default border (for example on an iframe or button).
cursor: pointer;	Shows the hand cursor to indicate something clickable.

Check your work

- Browser offers to save the password
- Checkbox label is clickable
- Card never wider than 22rem
- Password minimum length enforced

Exercises

1. Add a show/hide password button.
2. Add a 'Sign in with...' divider using ::before/::after lines.
3. Show a friendly error message region with aria-live.

Theme data for this project

Field	Value
Business	Suez Auto Service
Tagline	Honest car servicing and repairs
City	Suez
Owner	Khaled Nasser
Brand colour	#374151
Accent colour	#f9fafb
Offers	Oil change (600 EGP); Brake pads (1400 EGP); Air conditioning (900 EGP); Pre-purchase inspection (750 EGP)

Project 395: Login form for Luxor Music Academy

Theme: Luxor Music Academy (Luxor) | Level 1 | Files: index.html, styles.css

Brief

Build a compact sign-in card with email, password, remember-me checkbox and a link, using the correct autocomplete tokens so password managers work.

Learning goals

- Use autocomplete="username" and "current-password"
- Wrap a checkbox in its label
- Size a card with min()

Elements and CSS used

HTML elements	CSS features
form, h1, label, input, button, p, a	width: min(), box-shadow, :not(), display: flex, align-items

Build guide

1. Write the form with labels before each input.
2. Add autocomplete tokens and minlength on the password.
3. Wrap the checkbox inside its label.
4. Make the form a grid with small gaps.
5. Exclude the checkbox from the input styling with :not([type=checkbox]).
6. Centre the card.

Project 395: index.html

```

Project 398: Login form for Nubian Guest House

Theme: Nubian Guest House (Aswan) | Level 1 | Files: index.html, styles.css

Brief

Build a compact sign-in card with email, password, remember-me checkbox and a link, using the correct autocomplete tokens so password managers work.

Learning goals

- Use autocomplete="username" and "current-password"
- Wrap a checkbox in its label
- Size a card with min()

Elements and CSS used

HTML elements	CSS features
form, h1, label, input, button, p, a	width: min(), box-shadow, :not(), display: flex, align-items

Build guide

1. Write the form with labels before each input.
2. Add autocomplete tokens and minlength on the password.
3. Wrap the checkbox inside its label.
4. Make the form a grid with small gaps.
5. Exclude the checkbox from the input styling with :not([type=checkbox]).
6. Centre the card.

Project 398: index.html

Project 398 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Nubian Guest House - Sign in</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
<form class="login" action="/login" method="post">	A form; action is where the data goes, method how it is sent.
Sign in to Nubian Guest House	The main heading; only one per page.
<label for="user">Email</label>	Text label for a control; for matches the control's id, or the label wraps the control.
<input id="user" name="email" type="email" required autocomplete="u...	Email field: validated automatically and shows the @ keyboard on phones.
<input id="pass" name="password" type="password" required minlength...	Password field: characters are hidden.

Line	What it does
<label class="check"><input type="checkbox" name="remember"> Rememb...	Checkbox: on or off.
<button type="submit">Sign in</button>	A clickable button; inside a form it submits by default.
Forgot your password?	A paragraph of text.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #b45309;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
min-height: 100vh;	At least as tall as the viewport.
display: grid;	Turns the element into a grid container.

Declaration	What it does
place-items: center;	Centres items horizontally and vertically in a grid.
background: var(--accent);	Background colour or image.
padding: 1rem;	Space inside the element between its border and content.
width: min(100%, 22rem);	Uses the smaller of the listed values.
border-radius: 14px;	Rounds the corners.
box-shadow: 0 8px 24px rgb(0 0 0 / 10%);	Soft shadow that lifts the element from the page.
gap: .4rem;	Space between grid or flex items without extra margins.
font-size: 1.3rem;	Size of the text.
text-align: center;	Centres inline content such as text.
font-weight: 600;	Thickness of the text.
input:not([type="checkbox"]) {	Excludes elements from a selector.
border: 1px solid #bbb;	Changes the visual order of a flex item without changing the source.
border-radius: 8px;	The line around the element: width, style and colour.
font: inherit;	Makes form controls use the page font instead of the browser default.
display: flex;	Turns the element into a flex container (one-dimensional layout).
align-items: center;	Centres items on the cross axis.
border: 0;	Removes the default border (for example on an iframe or button).
cursor: pointer;	Shows the hand cursor to indicate something clickable.

Check your work

- Browser offers to save the password
- Checkbox label is clickable
- Card never wider than 22rem
- Password minimum length enforced

Exercises

1. Add a show/hide password button.
2. Add a 'Sign in with...' divider using ::before/::after lines.
3. Show a friendly error message region with aria-live.

Accent colour	#eff6ff
Offers	HTML weekend (Free); CSS art (Free); Scratch games (Free); Hackathon (Free)

Project type: Vertical timeline

Level 2 | 25 projects, one per theme

Show the business history as an ordered list drawn as a vertical timeline with a line and dots, using only pseudo-elements.

Project 401: Vertical timeline for Cairo Book Shop

Theme: Cairo Book Shop (Giza) | Level 2 | Files: index.html, styles.css

Brief

Show the business history as an ordered list drawn as a vertical timeline with a line and dots, using only pseudo-elements.

Learning goals

- Use <ol> and <time> for dated events
- Draw a line and markers with ::before
- Combine relative and absolute positioning

Elements and CSS used

HTML elements	CSS features
ol, li, time, p	position: relative, position: absolute, ::before, border-radius: 50%, box-shadow ring

Build guide

1. Write an <ol class="timeline"> with a <time> and <p> per event.
2. Remove bullets and add left padding for the line.
3. Draw the vertical line with .timeline::before.
4. Draw a dot per item with li::before positioned to the left.
5. Style the year.
6. Check the datetime attributes are valid.

Project 401: index.html

```
<!DOCTYPE html>

<time datetime="2023">2023</time><p>Second location and new boo...	A date or time; datetime holds the machine-readable value.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #b90000;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 40rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
list-style: none;	Removes bullets or numbers from a list.
position: relative;	Keeps normal flow but becomes the reference for absolutely positioned children.
content: "";	The text or empty string for a pseudo-element.
position: absolute;	Removes the element from flow and positions it relative to the nearest positioned ancestor.
background: var(--line);	Background colour or image.

Declaration	What it does
border-radius: 50%;	Turns a square into a circle.
border: 3px solid #fff;	Changes the visual order of a flex item without changing the source.
box-shadow: 0 0 0 2px var(--brand);	Soft shadow that lifts the element from the page.
font-weight: 700;	Thickness of the text.

Check your work

- Events in chronological order
- Line runs from first dot to last
- Dots centred on the line
- Works when text wraps

Exercises

1. Alternate items left and right on wide screens.
2. Animate dots appearing with animation-timeline: view().
3. Add images to some events.

Theme data for this project

Field	Value
Business	Cairo Book Shop
Tagline	PDF and printed books about web development
City	Giza
Owner	Mohamed Khattab
Brand colour	#b90000
Accent colour	#f4f1ea
Offers	Learn HTML (120 EGP); CSS in Practice (150 EGP); JavaScript Basics (180 EGP); Web Accessibility (95 EGP)

Project 402: Vertical timeline for Nile Bakery

Theme: Nile Bakery (Cairo) | Level 2 | Files: index.html, styles.css

Brief

Show the business history as an ordered list drawn as a vertical timeline with a line and dots, using only pseudo-elements.

Learning goals

- Use <ol> and <time> for dated events
- Draw a line and markers with ::before
- Combine relative and absolute positioning

Elements and CSS used

HTML elements	CSS features
ol, li, time, p	position: relative, position: absolute, ::before, border-radius: 50%, box-shadow ring

Build guide

1. Write an <ol class="timeline"> with a <time> and <p> per event.
2. Remove bullets and add left padding for the line.
3. Draw the vertical line with .timeline::before.
4. Draw a dot per item with li::before positioned to the left.
5. Style the year.
6. Check the datetime attributes are valid.

Project 402: index.html

```

border-radius: 50%;	Turns a square into a circle.
border: 3px solid #fff;	Changes the visual order of a flex item without changing the source.
box-shadow: 0 0 0 2px var(--brand);	Soft shadow that lifts the element from the page.
font-weight: 700;	Thickness of the text.

Check your work

- Events in chronological order
- Line runs from first dot to last
- Dots centred on the line
- Works when text wraps

Exercises

1. Alternate items left and right on wide screens.
2. Animate dots appearing with animation-timeline: view().
3. Add images to some events.

Theme data for this project

Field	Value
Business	Red Sea Travel
Tagline	Discover Egypt from desert to reef
City	Hurghada
Owner	Laila Mansour
Brand colour	#0369a1
Accent colour	#f0f9ff
Offers	Luxor day trip (1200 EGP); Snorkelling (700 EGP); Desert safari (900 EGP); Nile cruise (6500 EGP)

Project 406: Vertical timeline for Lotus Language School

Theme: Lotus Language School (Alexandria) | Level 2 | Files: index.html, styles.css

Brief

Show the business history as an ordered list drawn as a vertical timeline with a line and dots, using only pseudo-elements.

Learning goals

- Use <ol> and <time> for dated events
- Draw a line and markers with ::before
- Combine relative and absolute positioning

Elements and CSS used

HTML elements	CSS features
ol, li, time, p	position: relative, position: absolute, ::before, border-radius: 50%, box-shadow ring

Build guide

1. Write an <ol class="timeline"> with a <time> and <p> per event.
2. Remove bullets and add left padding for the line.
3. Draw the vertical line with .timeline::before.
4. Draw a dot per item with li::before positioned to the left.
5. Style the year.
6. Check the datetime attributes are valid.

Project 406: index.html

```

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Papyrus Stationery - History</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
Our history	The main heading; only one per page.
<ol class="timeline">	Ordered (numbered) list; the order matters.
<time datetime="2018">2018</time><p>Dina Fathy opens Papyrus St...	A paragraph of text.
<time datetime="2020">2020</time><p>Online ordering launched.</...	One list item.
<time datetime="2023">2023</time><p>Second location and new pro...	A date or time; datetime holds the machine-readable value.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #be185d;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 40rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
list-style: none;	Removes bullets or numbers from a list.
position: relative;	Keeps normal flow but becomes the reference for absolutely positioned children.
content: "";	The text or empty string for a pseudo-element.
position: absolute;	Removes the element from flow and positions it relative to the nearest positioned ancestor.
background: var(--line);	Background colour or image.

Declaration	What it does
border-radius: 50%;	Turns a square into a circle.
border: 3px solid #fff;	Changes the visual order of a flex item without changing the source.
box-shadow: 0 0 0 2px var(--brand);	Soft shadow that lifts the element from the page.
font-weight: 700;	Thickness of the text.

Check your work

- Events in chronological order
- Line runs from first dot to last
- Dots centred on the line
- Works when text wraps

Exercises

1. Alternate items left and right on wide screens.
2. Animate dots appearing with animation-timeline: view().
3. Add images to some events.

Theme data for this project

Field	Value
Business	Papyrus Stationery
Tagline	Notebooks, pens and paper made in Egypt
City	Heliopolis
Owner	Dina Fathy
Brand colour	#be185d
Accent colour	#fdf2f8
Offers	Dotted notebook (140 EGP); Fountain pen (350 EGP); Washi tape set (90 EGP); Desk planner (110 EGP)

Project 411: Vertical timeline for Oasis Plant Nursery

Theme: Oasis Plant Nursery (Sheikh Zayed) | Level 2 | Files: index.html, styles.css

Brief

Show the business history as an ordered list drawn as a vertical timeline with a line and dots, using only pseudo-elements.

Learning goals

- Use <ol> and <time> for dated events
- Draw a line and markers with ::before
- Combine relative and absolute positioning

Elements and CSS used

HTML elements	CSS features
ol, li, time, p	position: relative, position: absolute, ::before, border-radius: 50%, box-shadow ring

Build guide

1. Write an <ol class="timeline"> with a <time> and <p> per event.
2. Remove bullets and add left padding for the line.
3. Draw the vertical line with .timeline::before.
4. Draw a dot per item with li::before positioned to the left.
5. Style the year.
6. Check the datetime attributes are valid.

Project 411: index.html

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Sahara Pet Care - History</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
Our history	The main heading; only one per page.
<ol class="timeline">	Ordered (numbered) list; the order matters.
<time datetime="2018">2018</time><p>Rana Ibrahim opens Sahara P...	A paragraph of text.
<time datetime="2020">2020</time><p>Online ordering launched.<//...	One list item.
<time datetime="2023">2023</time><p>Second location and new ser...	A date or time; datetime holds the machine-readable value.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #c2410c;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 40rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
list-style: none;	Removes bullets or numbers from a list.
position: relative;	Keeps normal flow but becomes the reference for absolutely positioned children.
content: "";	The text or empty string for a pseudo-element.
position: absolute;	Removes the element from flow and positions it relative to the nearest positioned ancestor.
background: var(--line);	Background colour or image.

Declaration	What it does
border-radius: 50%;	Turns a square into a circle.
border: 3px solid #fff;	Changes the visual order of a flex item without changing the source.
box-shadow: 0 0 0 2px var(--brand);	Soft shadow that lifts the element from the page.
font-weight: 700;	Thickness of the text.

Check your work

- Events in chronological order
- Line runs from first dot to last
- Dots centred on the line
- Works when text wraps

Exercises

1. Alternate items left and right on wide screens.
2. Animate dots appearing with animation-timeline: view().
3. Add images to some events.

Theme data for this project

Field	Value
Business	Sahara Pet Care
Tagline	Grooming, boarding and vet visits
City	New Cairo
Owner	Rana Ibrahim
Brand colour	#c2410c
Accent colour	#fff7ed
Offers	Full grooming (400 EGP); Day boarding (250 EGP); Vaccination (300 EGP); Dog walking (100 EGP)

Project 415: Vertical timeline for Alexandria Sailing School

Theme: Alexandria Sailing School (Alexandria) | Level 2 | Files: index.html, styles.css

Brief

Show the business history as an ordered list drawn as a vertical timeline with a line and dots, using only pseudo-elements.

Learning goals

- Use <ol> and <time> for dated events
- Draw a line and markers with ::before
- Combine relative and absolute positioning

Elements and CSS used

HTML elements	CSS features
ol, li, time, p	position: relative, position: absolute, ::before, border-radius: 50%, box-shadow ring

Build guide

1. Write an <ol class="timeline"> with a <time> and <p> per event.
2. Remove bullets and add left padding for the line.
3. Draw the vertical line with .timeline::before.
4. Draw a dot per item with li::before positioned to the left.
5. Style the year.
6. Check the datetime attributes are valid.

Project 415: index.html

```
<!DOCTYPE html>

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #db2777;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 40rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
list-style: none;	Removes bullets or numbers from a list.
position: relative;	Keeps normal flow but becomes the reference for absolutely positioned children.
content: "";	The text or empty string for a pseudo-element.
position: absolute;	Removes the element from flow and positions it relative to the nearest positioned ancestor.
background: var(--line);	Background colour or image.

Declaration	What it does
border-radius: 50%;	Turns a square into a circle.
border: 3px solid #fff;	Changes the visual order of a flex item without changing the source.
box-shadow: 0 0 0 2px var(--brand);	Soft shadow that lifts the element from the page.
font-weight: 700;	Thickness of the text.

Check your work

- Events in chronological order
- Line runs from first dot to last
- Dots centred on the line
- Works when text wraps

Exercises

1. Alternate items left and right on wide screens.
2. Animate dots appearing with animation-timeline: view().
3. Add images to some events.

Theme data for this project

Field	Value
Business	Cleopatra Beauty Salon
Tagline	Hair, nails and skin care
City	Dokki
Owner	Mariam Adel
Brand colour	#db2777
Accent colour	#fdf2f8
Offers	Haircut and blow-dry (350 EGP); Manicure (200 EGP); Facial (600 EGP); Bridal package (4500 EGP)

Project 419: Vertical timeline for Suez Auto Service

Theme: Suez Auto Service (Suez) | Level 2 | Files: index.html, styles.css

Brief

Show the business history as an ordered list drawn as a vertical timeline with a line and dots, using only pseudo-elements.

Learning goals

- Use <ol> and <time> for dated events
- Draw a line and markers with ::before
- Combine relative and absolute positioning

Elements and CSS used

HTML elements	CSS features
ol, li, time, p	position: relative, position: absolute, ::before, border-radius: 50%, box-shadow ring

Build guide

1. Write an <ol class="timeline"> with a <time> and <p> per event.
2. Remove bullets and add left padding for the line.
3. Draw the vertical line with .timeline::before.
4. Draw a dot per item with li::before positioned to the left.
5. Style the year.
6. Check the datetime attributes are valid.

Project 419: index.html

```
<!DOCTYPE html>

line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 40rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
list-style: none;	Removes bullets or numbers from a list.
position: relative;	Keeps normal flow but becomes the reference for absolutely positioned children.
content: "";	The text or empty string for a pseudo-element.
position: absolute;	Removes the element from flow and positions it relative to the nearest positioned ancestor.
background: var(--line);	Background colour or image.

Declaration	What it does
border-radius: 50%;	Turns a square into a circle.
border: 3px solid #fff;	Changes the visual order of a flex item without changing the source.
box-shadow: 0 0 0 2px var(--brand);	Soft shadow that lifts the element from the page.
font-weight: 700;	Thickness of the text.

Check your work

- Events in chronological order
- Line runs from first dot to last
- Dots centred on the line
- Works when text wraps

Exercises

1. Alternate items left and right on wide screens.
2. Animate dots appearing with animation-timeline: view().
3. Add images to some events.

Theme data for this project

Field	Value
Business	Delta Kids Library
Tagline	Stories, reading clubs and homework help
City	Tanta
Owner	Ghada Kamel
Brand colour	#ea580c
Accent colour	#fff7ed
Offers	Story hour (Free); Reading club (50 EGP per month); Homework help (Free); Summer challenge (Free)

Project 423: Vertical timeline for Nubian Guest House

Theme: Nubian Guest House (Aswan) | Level 2 | Files: index.html, styles.css

Brief

Show the business history as an ordered list drawn as a vertical timeline with a line and dots, using only pseudo-elements.

Learning goals

- Use <ol> and <time> for dated events
- Draw a line and markers with ::before
- Combine relative and absolute positioning

Elements and CSS used

HTML elements	CSS features
ol, li, time, p	position: relative, position: absolute, ::before, border-radius: 50%, box-shadow ring

Build guide

1. Write an <ol class="timeline"> with a <time> and <p> per event.
2. Remove bullets and add left padding for the line.
3. Draw the vertical line with .timeline::before.
4. Draw a dot per item with li::before positioned to the left.
5. Style the year.
6. Check the datetime attributes are valid.

Project 423: index.html

```

Project type: Statistics dashboard

Level 2 | 25 projects, one per theme

Build an admin-style dashboard: four statistic cards with a coloured top border and a panel containing a recent-orders table with status badges.

Project 426: Statistics dashboard for Cairo Book Shop

Theme: Cairo Book Shop (Giza) | Level 2 | Files: index.html, styles.css

Brief

Build an admin-style dashboard: four statistic cards with a coloured top border and a panel containing a recent-orders table with status badges.

Learning goals

- Present numbers in cards with small uppercase labels
- Create pill-shaped status badges
- Combine grid cards and a table

Elements and CSS used

HTML elements	CSS features
article, h2, p, section, table, thead, tbody, span	border-top, text-transform, letter-spacing, border-radius: 999px, grid auto-fit

Build guide

1. Write four .stat articles inside .stats.
2. Add the panel with a small table.
3. Wrap statuses in .
4. Grid the cards.
5. Style the badges as pills with soft background colours.
6. Give the page a light grey background so white panels stand out.

--brand: #b90000;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
background: #f3f4f6;	Background colour or image.
max-width: 64rem;	Limits how wide the element can grow, keeping lines readable.
margin: 0 auto;	Centres a block horizontally: zero top/bottom, automatic left/right.
padding: 1.5rem 1rem;	Space inside the element between its border and content.
display: grid;	Turns the element into a grid container.
gap: 1rem;	Space between grid or flex items without extra margins.
grid-template-columns: repeat(auto-fit, minmax(12rem, 1fr));	Defines the columns of the grid.
border-radius: 12px;	Rounds the corners.
border-top: 4px solid var(--brand);	A top border used as an accent or separator.
font-size: .85rem;	Size of the text.
text-transform: uppercase;	Displays text in capitals without changing the HTML.

Declaration	What it does
letter-spacing: .05em;	Adds space between letters; useful for small capitals.
font-weight: 700;	Thickness of the text.
border-radius: 12px;	The line around the element: width, style and colour.
width: 100%;	Fills the container width.
border-collapse: collapse;	Merges adjacent table cell borders into single lines.
border-bottom: 1px solid var(--line);	A bottom border used as a separator line.
border-radius: 999px;	Fully rounded pill shape.

Check your work

- Stat labels are headings
- Table has header cells
- Badge colours pass contrast
- Cards wrap on phones

Exercises

1. Add a simple bar chart made of divs with widths in percent.
2. Add a sidebar navigation.
3. Add a dark theme with prefers-color-scheme.

Theme data for this project

Field	Value
Business	Cairo Book Shop
Tagline	PDF and printed books about web development
City	Giza

Field	Value
Owner	Mohamed Khattab
Brand colour	#b90000
Accent colour	#f4f1ea
Offers	Learn HTML (120 EGP); CSS in Practice (150 EGP); JavaScript Basics (180 EGP); Web Accessibility (95 EGP)

Project 427: Statistics dashboard for Nile Bakery

Theme: Nile Bakery (Cairo) | Level 2 | Files: index.html, styles.css

Brief

Build an admin-style dashboard: four statistic cards with a coloured top border and a panel containing a recent-orders table with status badges.

Learning goals

- Present numbers in cards with small uppercase labels
- Create pill-shaped status badges
- Combine grid cards and a table

Elements and CSS used

HTML elements	CSS features
article, h2, p, section, table, thead, tbody, span	border-top, text-transform, letter-spacing, border-radius: 999px, grid auto-fit

Build guide

1. Write four .stat articles inside .stats.
2. Add the panel with a small table.
3. Wrap statuses in .
4. Grid the cards.
5. Style the badges as pills with soft background colours.
6. Give the page a light grey background so white panels stand out.

Project 427: index.html

2. Add a sidebar navigation.
3. Add a dark theme with prefers-color-scheme.

Theme data for this project

Field	Value
Business	Delta Dental Clinic
Tagline	Gentle care for the whole family
City	Mansoura
Owner	Dr. Hana Youssef
Brand colour	#1d4ed8

Field	Value
Accent colour	#eff6ff
Offers	Check-up (300 EGP); Whitening (1500 EGP); Filling (600 EGP); Braces consultation (Free)

Project 430: Statistics dashboard for Red Sea Travel

Theme: Red Sea Travel (Hurghada) | Level 2 | Files: index.html, styles.css

Brief

Build an admin-style dashboard: four statistic cards with a coloured top border and a panel containing a recent-orders table with status badges.

Learning goals

- Present numbers in cards with small uppercase labels
- Create pill-shaped status badges
- Combine grid cards and a table

Elements and CSS used

HTML elements	CSS features
article, h2, p, section, table, thead, tbody, span	border-top, text-transform, letter-spacing, border-radius: 999px, grid auto-fit

Build guide

1. Write four .stat articles inside .stats.
2. Add the panel with a small table.
3. Wrap statuses in .
4. Grid the cards.
5. Style the badges as pills with soft background colours.
6. Give the page a light grey background so white panels stand out.

Project 430: index.html

Project 430 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Red Sea Travel - Dashboard</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
Red Sea Travel dashboard	The main heading; only one per page.
	Generic block container for grouping and layout.
<article class="stat"> Visitors today 1,284...	A self-contained piece: card, post, product.
<article class="stat"> Tours sold 57 </a...	Second-level heading for a section.

Line	What it does
<article class="stat"> Revenue <p class="value">18,450 EGP<//...	A paragraph of text.
<section class="panel">	A thematic group of content, normally with its own heading.
<table>	Tabular data in rows and columns.
<thead><tr><th>Order</th><th>Tour</th><th>Status</th></tr></thead>	Group of header rows.
<tbody>	Group of data rows.
<tr><td>#1041</td><td>Luxor day trip</td><td><span class="badge ok"...	A table row.
<tr><td>#1040</td><td>Snorkelling</td><td>...	A data cell.
<tr><td>#1039</td><td>Desert safari</td><td>...	Generic inline container for styling.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.

Declaration	What it does
--brand: #0369a1;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
background: #f3f4f6;	Background colour or image.
max-width: 64rem;	Limits how wide the element can grow, keeping lines readable.
margin: 0 auto;	Centres a block horizontally: zero top/bottom, automatic left/right.
padding: 1.5rem 1rem;	Space inside the element between its border and content.
display: grid;	Turns the element into a grid container.
gap: 1rem;	Space between grid or flex items without extra margins.
grid-template-columns: repeat(auto-fit, minmax(12rem, 1fr));	Defines the columns of the grid.
border-radius: 12px;	Rounds the corners.
border-top: 4px solid var(--brand);	A top border used as an accent or separator.
font-size: .85rem;	Size of the text.
text-transform: uppercase;	Displays text in capitals without changing the HTML.
letter-spacing: .05em;	Adds space between letters; useful for small capitals.

Declaration	What it does
font-weight: 700;	Thickness of the text.
border-radius: 12px;	The line around the element: width, style and colour.
width: 100%;	Fills the container width.
border-collapse: collapse;	Merges adjacent table cell borders into single lines.
border-bottom: 1px solid var(--line);	A bottom border used as a separator line.
border-radius: 999px;	Fully rounded pill shape.

Check your work

- Stat labels are headings
- Table has header cells
- Badge colours pass contrast
- Cards wrap on phones

Exercises

1. Add a simple bar chart made of divs with widths in percent.
2. Add a sidebar navigation.
3. Add a dark theme with prefers-color-scheme.

Theme data for this project

Field	Value
Business	Red Sea Travel
Tagline	Discover Egypt from desert to reef
City	Hurghada
Owner	Laila Mansour
Brand colour	#0369a1

Field	Value
Accent colour	#f0f9ff
Offers	Luxor day trip (1200 EGP); Snorkelling (700 EGP); Desert safari (900 EGP); Nile cruise (6500 EGP)

Project 431: Statistics dashboard for Lotus Language School

Theme: Lotus Language School (Alexandria) | Level 2 | Files: index.html, styles.css

Project 433 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Sinai Trekking Club - Dashboard</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
Sinai Trekking Club dashboard	The main heading; only one per page.
	Generic block container for grouping and layout.
<article class="stat"> Visitors today 1,284...	A self-contained piece: card, post, product.
<article class="stat"> Hikes sold 57 </a...	Second-level heading for a section.

Line	What it does
<article class="stat"> Revenue <p class="value">18,450 EGP<//...	A paragraph of text.
<section class="panel">	A thematic group of content, normally with its own heading.
<table>	Tabular data in rows and columns.
<thead><tr><th>Order</th><th>Hike</th><th>Status</th></tr></thead>	Group of header rows.
<tbody>	Group of data rows.
<tr><td>#1041</td><td>Mount Sinai sunrise</td><td><span class="badg...	A table row.
<tr><td>#1040</td><td>Blue Desert loop</td><td><span class="badge w...	A data cell.
<tr><td>#1039</td><td>Wadi Gnai</td><td>Paid...	Generic inline container for styling.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.

Declaration	What it does
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #92400e;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
background: #f3f4f6;	Background colour or image.
max-width: 64rem;	Limits how wide the element can grow, keeping lines readable.
margin: 0 auto;	Centres a block horizontally: zero top/bottom, automatic left/right.
padding: 1.5rem 1rem;	Space inside the element between its border and content.
display: grid;	Turns the element into a grid container.
gap: 1rem;	Space between grid or flex items without extra margins.
grid-template-columns: repeat(auto-fit, minmax(12rem, 1fr));	Defines the columns of the grid.
border-radius: 12px;	Rounds the corners.
border-top: 4px solid var(--brand);	A top border used as an accent or separator.
font-size: .85rem;	Size of the text.
text-transform: uppercase;	Displays text in capitals without changing the HTML.

Declaration	What it does
letter-spacing: .05em;	Adds space between letters; useful for small capitals.
font-weight: 700;	Thickness of the text.
border-radius: 12px;	The line around the element: width, style and colour.
width: 100%;	Fills the container width.
border-collapse: collapse;	Merges adjacent table cell borders into single lines.
border-bottom: 1px solid var(--line);	A bottom border used as a separator line.
border-radius: 999px;	Fully rounded pill shape.

Check your work

- Stat labels are headings
- Table has header cells
- Badge colours pass contrast
- Cards wrap on phones

Exercises

1. Add a simple bar chart made of divs with widths in percent.
2. Add a sidebar navigation.
3. Add a dark theme with prefers-color-scheme.

Theme data for this project

Field	Value
Business	Sinai Trekking Club
Tagline	Guided mountain walks for every level
City	Saint Catherine

Field	Value
Owner	Yara Hamdy
Brand colour	#92400e
Accent colour	#fffbeb
Offers	Mount Sinai sunrise (400 EGP); Blue Desert loop (250 EGP); Wadi Gnai (300 EGP); Three-day traverse (1900 EGP)

Project 434: Statistics dashboard for Horizon Photography

Theme: Horizon Photography (Maadi) | Level 2 | Files: index.html, styles.css

Brief

Build an admin-style dashboard: four statistic cards with a coloured top border and a panel containing a recent-orders table with status badges.

Learning goals

- Present numbers in cards with small uppercase labels
- Create pill-shaped status badges
- Combine grid cards and a table

Elements and CSS used

HTML elements	CSS features
article, h2, p, section, table, thead, tbody, span	border-top, text-transform, letter-spacing, border-radius: 999px, grid auto-fit

Build guide

1. Write four .stat articles inside .stats.
2. Add the panel with a small table.
3. Wrap statuses in .
4. Grid the cards.
5. Style the badges as pills with soft background colours.
6. Give the page a light grey background so white panels stand out.

Project 436 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Oasis Plant Nursery - Dashboard</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
Oasis Plant Nursery dashboard	The main heading; only one per page.
	Generic block container for grouping and layout.
<article class="stat"> Visitors today 1,284...	A self-contained piece: card, post, product.
<article class="stat"> Plants sold 57 </...	Second-level heading for a section.

Line	What it does
<article class="stat"> Revenue <p class="value">18,450 EGP<//...	A paragraph of text.
<section class="panel">	A thematic group of content, normally with its own heading.
<table>	Tabular data in rows and columns.
<thead><tr><th>Order</th><th>Plant</th><th>Status</th></tr></thead>	Group of header rows.
<tbody>	Group of data rows.
<tr><td>#1041</td><td>Monstera</td><td>Paid<...	A table row.
<tr><td>#1040</td><td>Snake plant</td><td>...	A data cell.
<tr><td>#1039</td><td>Basil pot</td><td>Paid...	Generic inline container for styling.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.

Declaration	What it does
--brand: #15803d;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
background: #f3f4f6;	Background colour or image.
max-width: 64rem;	Limits how wide the element can grow, keeping lines readable.
margin: 0 auto;	Centres a block horizontally: zero top/bottom, automatic left/right.
padding: 1.5rem 1rem;	Space inside the element between its border and content.
display: grid;	Turns the element into a grid container.
gap: 1rem;	Space between grid or flex items without extra margins.
grid-template-columns: repeat(auto-fit, minmax(12rem, 1fr));	Defines the columns of the grid.
border-radius: 12px;	Rounds the corners.
border-top: 4px solid var(--brand);	A top border used as an accent or separator.
font-size: .85rem;	Size of the text.
text-transform: uppercase;	Displays text in capitals without changing the HTML.
letter-spacing: .05em;	Adds space between letters; useful for small capitals.

Declaration	What it does
font-weight: 700;	Thickness of the text.
border-radius: 12px;	The line around the element: width, style and colour.
width: 100%;	Fills the container width.
border-collapse: collapse;	Merges adjacent table cell borders into single lines.
border-bottom: 1px solid var(--line);	A bottom border used as a separator line.
border-radius: 999px;	Fully rounded pill shape.

Check your work

- Stat labels are headings
- Table has header cells
- Badge colours pass contrast
- Cards wrap on phones

Exercises

1. Add a simple bar chart made of divs with widths in percent.
2. Add a sidebar navigation.
3. Add a dark theme with prefers-color-scheme.

Theme data for this project

Field	Value
Business	Oasis Plant Nursery
Tagline	Indoor plants and gardening advice
City	Sheikh Zayed
Owner	Hossam Ali
Brand colour	#15803d

Field	Value
Accent colour	#f7fee7
Offers	Monstera (250 EGP); Snake plant (120 EGP); Basil pot (45 EGP); Olive tree (600 EGP)

Project 437: Statistics dashboard for Cedar Furniture

Theme: Cedar Furniture (Damietta) | Level 2 | Files: index.html, styles.css

Brief

Build an admin-style dashboard: four statistic cards with a coloured top border and a panel containing a recent-orders table with status badges.

Learning goals

- Present numbers in cards with small uppercase labels
- Create pill-shaped status badges
- Combine grid cards and a table

Elements and CSS used

HTML elements	CSS features
article, h2, p, section, table, thead, tbody, span	border-top, text-transform, letter-spacing, border-radius: 999px, grid auto-fit

Build guide

1. Write four .stat articles inside .stats.
2. Add the panel with a small table.
3. Wrap statuses in .
4. Grid the cards.
5. Style the badges as pills with soft background colours.
6. Give the page a light grey background so white panels stand out.

<tr><td>#1039</td><td>Vaccination</td><td>Pa...	Generic inline container for styling.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.

Declaration	What it does
--brand: #c2410c;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
background: #f3f4f6;	Background colour or image.
max-width: 64rem;	Limits how wide the element can grow, keeping lines readable.
margin: 0 auto;	Centres a block horizontally: zero top/bottom, automatic left/right.
padding: 1.5rem 1rem;	Space inside the element between its border and content.
display: grid;	Turns the element into a grid container.
gap: 1rem;	Space between grid or flex items without extra margins.
grid-template-columns: repeat(auto-fit, minmax(12rem, 1fr));	Defines the columns of the grid.
border-radius: 12px;	Rounds the corners.
border-top: 4px solid var(--brand);	A top border used as an accent or separator.
font-size: .85rem;	Size of the text.
text-transform: uppercase;	Displays text in capitals without changing the HTML.
letter-spacing: .05em;	Adds space between letters; useful for small capitals.

Declaration	What it does
font-weight: 700;	Thickness of the text.
border-radius: 12px;	The line around the element: width, style and colour.
width: 100%;	Fills the container width.
border-collapse: collapse;	Merges adjacent table cell borders into single lines.
border-bottom: 1px solid var(--line);	A bottom border used as a separator line.
border-radius: 999px;	Fully rounded pill shape.

Check your work

- Stat labels are headings
- Table has header cells
- Badge colours pass contrast
- Cards wrap on phones

Exercises

1. Add a simple bar chart made of divs with widths in percent.
2. Add a sidebar navigation.
3. Add a dark theme with prefers-color-scheme.

Theme data for this project

Field	Value
Business	Sahara Pet Care
Tagline	Grooming, boarding and vet visits
City	New Cairo
Owner	Rana Ibrahim
Brand colour	#c2410c

Field	Value
Accent colour	#fff7ed
Offers	Full grooming (400 EGP); Day boarding (250 EGP); Vaccination (300 EGP); Dog walking (100 EGP)

Project 440: Statistics dashboard for Alexandria Sailing School

Theme: Alexandria Sailing School (Alexandria) | Level 2 | Files: index.html, styles.css

Brief

Build an admin-style dashboard: four statistic cards with a coloured top border and a panel containing a recent-orders table with status badges.

Learning goals

- Present numbers in cards with small uppercase labels
- Create pill-shaped status badges
- Combine grid cards and a table

Elements and CSS used

HTML elements	CSS features
article, h2, p, section, table, thead, tbody, span	border-top, text-transform, letter-spacing, border-radius: 999px, grid auto-fit

Build guide

1. Write four .stat articles inside .stats.
2. Add the panel with a small table.
3. Wrap statuses in .
4. Grid the cards.
5. Style the badges as pills with soft background colours.

6. Give the page a light grey background so white panels stand out.

*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.

Declaration	What it does
--brand: #9a3412;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
background: #f3f4f6;	Background colour or image.
max-width: 64rem;	Limits how wide the element can grow, keeping lines readable.
margin: 0 auto;	Centres a block horizontally: zero top/bottom, automatic left/right.
padding: 1.5rem 1rem;	Space inside the element between its border and content.
display: grid;	Turns the element into a grid container.
gap: 1rem;	Space between grid or flex items without extra margins.
grid-template-columns: repeat(auto-fit, minmax(12rem, 1fr));	Defines the columns of the grid.
border-radius: 12px;	Rounds the corners.
border-top: 4px solid var(--brand);	A top border used as an accent or separator.
font-size: .85rem;	Size of the text.
text-transform: uppercase;	Displays text in capitals without changing the HTML.
letter-spacing: .05em;	Adds space between letters; useful for small capitals.

Declaration	What it does
font-weight: 700;	Thickness of the text.
border-radius: 12px;	The line around the element: width, style and colour.
width: 100%;	Fills the container width.
border-collapse: collapse;	Merges adjacent table cell borders into single lines.
border-bottom: 1px solid var(--line);	A bottom border used as a separator line.
border-radius: 999px;	Fully rounded pill shape.

Check your work

- Stat labels are headings
- Table has header cells
- Badge colours pass contrast
- Cards wrap on phones

Exercises

1. Add a simple bar chart made of divs with widths in percent.
2. Add a sidebar navigation.
3. Add a dark theme with prefers-color-scheme.

Theme data for this project

Field	Value
Business	Fayoum Pottery Studio
Tagline	Wheel throwing and glazing classes
City	Tunis Village
Owner	Ahmed Mahmoud
Brand colour	#9a3412

Field	Value
Accent colour	#fff7ed
Offers	Intro to the wheel (450 EGP); Glazing day (300 EGP); Kids clay class (200 EGP); Weekend retreat (2500 EGP)

Project 443: Statistics dashboard for Cleopatra Beauty Salon

Theme: Cleopatra Beauty Salon (Dokki) | Level 2 | Files: index.html, styles.css

Brief

Build an admin-style dashboard: four statistic cards with a coloured top border and a panel containing a recent-orders table with status badges.

Learning goals

- Present numbers in cards with small uppercase labels
- Create pill-shaped status badges
- Combine grid cards and a table

Elements and CSS used

HTML elements	CSS features
article, h2, p, section, table, thead, tbody, span	border-top, text-transform, letter-spacing, border-radius: 999px, grid auto-fit

Build guide

1. Write four .stat articles inside .stats.
2. Add the panel with a small table.
3. Wrap statuses in .
4. Grid the cards.
5. Style the badges as pills with soft background colours.

6. Give the page a light grey background so white panels stand out.

font-weight: 700;	Thickness of the text.
border-radius: 12px;	The line around the element: width, style and colour.
width: 100%;	Fills the container width.
border-collapse: collapse;	Merges adjacent table cell borders into single lines.
border-bottom: 1px solid var(--line);	A bottom border used as a separator line.
border-radius: 999px;	Fully rounded pill shape.

Check your work

- Stat labels are headings
- Table has header cells
- Badge colours pass contrast
- Cards wrap on phones

Exercises

1. Add a simple bar chart made of divs with widths in percent.
2. Add a sidebar navigation.
3. Add a dark theme with prefers-color-scheme.

Theme data for this project

Field	Value
Business	Luxor Music Academy
Tagline	Oud, piano, guitar and voice lessons
City	Luxor
Owner	Salma Ragab
Brand colour	#4c1d95

Field	Value
Accent colour	#f5f3ff
Offers	Oud for beginners (1600 EGP); Piano grade 1 (1800 EGP); Guitar chords (1400 EGP); Voice coaching (1500 EGP)

Project 446: Statistics dashboard for Port Said Seafood

Theme: Port Said Seafood (Port Said) | Level 2 | Files: index.html, styles.css

Brief

Build an admin-style dashboard: four statistic cards with a coloured top border and a panel containing a recent-orders table with status badges.

Learning goals

- Present numbers in cards with small uppercase labels
- Create pill-shaped status badges
- Combine grid cards and a table

Elements and CSS used

HTML elements	CSS features
article, h2, p, section, table, thead, tbody, span	border-top, text-transform, letter-spacing, border-radius: 999px, grid auto-fit

Build guide

1. Write four .stat articles inside .stats.
2. Add the panel with a small table.
3. Wrap statuses in .
4. Grid the cards.
5. Style the badges as pills with soft background colours.
6. Give the page a light grey background so white panels stand out.

Project 446: index.html

Project 446 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Port Said Seafood - Dashboard</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
Port Said Seafood dashboard	The main heading; only one per page.
	Generic block container for grouping and layout.
<article class="stat"> Visitors today 1,284...	A self-contained piece: card, post, product.
<article class="stat"> Dishes sold 57 </...	Second-level heading for a section.

Line	What it does
<article class="stat"> Revenue <p class="value">18,450 EGP<//...	A paragraph of text.
<section class="panel">	A thematic group of content, normally with its own heading.
<table>	Tabular data in rows and columns.
<thead><tr><th>Order</th><th>Dish</th><th>Status</th></tr></thead>	Group of header rows.
<tbody>	Group of data rows.
<tr><td>#1041</td><td>Grilled sea bass</td><td><span class="badge o...	A table row.
<tr><td>#1040</td><td>Shrimp tagine</td><td><span class="badge wait...	A data cell.
<tr><td>#1039</td><td>Calamari</td><td>Paid<...	Generic inline container for styling.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.

Declaration	What it does
--brand: #0e7490;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
background: #f3f4f6;	Background colour or image.
max-width: 64rem;	Limits how wide the element can grow, keeping lines readable.
margin: 0 auto;	Centres a block horizontally: zero top/bottom, automatic left/right.
padding: 1.5rem 1rem;	Space inside the element between its border and content.
display: grid;	Turns the element into a grid container.
gap: 1rem;	Space between grid or flex items without extra margins.
grid-template-columns: repeat(auto-fit, minmax(12rem, 1fr));	Defines the columns of the grid.
border-radius: 12px;	Rounds the corners.
border-top: 4px solid var(--brand);	A top border used as an accent or separator.
font-size: .85rem;	Size of the text.
text-transform: uppercase;	Displays text in capitals without changing the HTML.
letter-spacing: .05em;	Adds space between letters; useful for small capitals.

Declaration	What it does
font-weight: 700;	Thickness of the text.
border-radius: 12px;	The line around the element: width, style and colour.
width: 100%;	Fills the container width.
border-collapse: collapse;	Merges adjacent table cell borders into single lines.
border-bottom: 1px solid var(--line);	A bottom border used as a separator line.
border-radius: 999px;	Fully rounded pill shape.

Check your work

HTML elements	CSS features
article, h2, p, section, table, thead, tbody, span	border-top, text-transform, letter-spacing, border-radius: 999px, grid auto-fit

Build guide

1. Write four .stat articles inside .stats.
2. Add the panel with a small table.
3. Wrap statuses in .
4. Grid the cards.
5. Style the badges as pills with soft background colours.

6. Give the page a light grey background so white panels stand out.

Project 449 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Ismailia Cycling Store - Dashboard</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
Ismailia Cycling Store dashboard	The main heading; only one per page.
	Generic block container for grouping and layout.
<article class="stat"> Visitors today 1,284...	A self-contained piece: card, post, product.
<article class="stat"> Bikes sold 57 </a...	Second-level heading for a section.

Line	What it does
<article class="stat"> Revenue <p class="value">18,450 EGP<//...	A paragraph of text.
<section class="panel">	A thematic group of content, normally with its own heading.
<table>	Tabular data in rows and columns.
<thead><tr><th>Order</th><th>Bike</th><th>Status</th></tr></thead>	Group of header rows.
<tbody>	Group of data rows.
<tr><td>#1041</td><td>City bike</td><td>Paid...	A table row.
<tr><td>#1040</td><td>Mountain bike</td><td><span class="badge wait...	A data cell.
<tr><td>#1039</td><td>Kids bike</td><td>Paid...	Generic inline container for styling.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.

Declaration	What it does
--brand: #dc2626;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
background: #f3f4f6;	Background colour or image.
max-width: 64rem;	Limits how wide the element can grow, keeping lines readable.
margin: 0 auto;	Centres a block horizontally: zero top/bottom, automatic left/right.
padding: 1.5rem 1rem;	Space inside the element between its border and content.
display: grid;	Turns the element into a grid container.
gap: 1rem;	Space between grid or flex items without extra margins.
grid-template-columns: repeat(auto-fit, minmax(12rem, 1fr));	Defines the columns of the grid.
border-radius: 12px;	Rounds the corners.
border-top: 4px solid var(--brand);	A top border used as an accent or separator.
font-size: .85rem;	Size of the text.
text-transform: uppercase;	Displays text in capitals without changing the HTML.
letter-spacing: .05em;	Adds space between letters; useful for small capitals.

Declaration	What it does
font-weight: 700;	Thickness of the text.
border-radius: 12px;	The line around the element: width, style and colour.
width: 100%;	Fills the container width.
border-collapse: collapse;	Merges adjacent table cell borders into single lines.
border-bottom: 1px solid var(--line);	A bottom border used as a separator line.
border-radius: 999px;	Fully rounded pill shape.

Check your work

- Stat labels are headings
- Table has header cells
- Badge colours pass contrast
- Cards wrap on phones

Exercises

1. Add a simple bar chart made of divs with widths in percent.
2. Add a sidebar navigation.
3. Add a dark theme with prefers-color-scheme.

Theme data for this project

Field	Value
Business	Ismailia Cycling Store
Tagline	Bikes, parts and Friday group rides
City	Ismailia
Owner	Bassem Adly
Brand colour	#dc2626

Field	Value
Accent colour	#fef2f2
Offers	City bike (6500 EGP); Mountain bike (11000 EGP); Kids bike (3200 EGP); Tune-up (250 EGP)

Project 450: Statistics dashboard for Minya Coding Club

Theme: Minya Coding Club (Minya) | Level 2 | Files: index.html, styles.css

Brief

Build an admin-style dashboard: four statistic cards with a coloured top border and a panel containing a recent-orders table with status badges.

Learning goals

- Present numbers in cards with small uppercase labels
- Create pill-shaped status badges
- Combine grid cards and a table

Elements and CSS used

HTML elements	CSS features
article, h2, p, section, table, thead, tbody, span	border-top, text-transform, letter-spacing, border-radius: 999px, grid auto-fit

Build guide

1. Write four .stat articles inside .stats.
2. Add the panel with a small table.
3. Wrap statuses in .
4. Grid the cards.
5. Style the badges as pills with soft background colours.
6. Give the page a light grey background so white panels stand out.

Offers	HTML weekend (Free); CSS art (Free); Scratch games (Free); Hackathon (Free)

Project type: 404 error page

Level 1 | 25 projects, one per theme

Design a friendly 'page not found' screen with a huge outlined 404, helpful links and a search box.

Project 451: 404 error page for Cairo Book Shop

Theme: Cairo Book Shop (Giza) | Level 1 | Files: index.html, styles.css

Brief

Design a friendly 'page not found' screen with a huge outlined 404, helpful links and a search box.

Learning goals

- Centre a block with place-content
- Use huge fluid type with clamp()
- Provide useful next steps on error pages

Elements and CSS used

HTML elements	CSS features
main, p, h1, ul, li, a, form, label, input, button	place-content: center, clamp(), -webkit-text-stroke, line-height, flex-wrap

Build guide

1. Write the page: code, heading, links and search form.
2. Set role="search" on the form.
3. Centre everything with grid and place-content.
4. Make the 404 huge with clamp() and outline it with text-stroke.
5. Lay out links and the form horizontally with wrapping.
6. Name the file 404.html and configure your host to use it.

Project 451: index.html

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1">
  <title>Page not found - Cairo Book Shop</title>
  <link rel="stylesheet" href="styles.css">
</head>
<body>
  <main class="nf">
    <p class="code">404</p>
    <h1>We can't find that page</h1>
    <p>The link may be old or the address mistyped. Try one of these
instead:</p>
    <ul>
      <li><a href="index.html">Cairo Book Shop home</a></li>
      <li><a href="books.html">All books</a></li>
      <li><a href="contact.html">Contact us</a></li>
    </ul>
    <form action="/search" role="search">
      <label for="q">Search the site</label>
      <input id="q" name="q" type="search">
      <button>Search</button>
    </form>
  </main>
</body>
</html>
```

Project 451: styles.css

```
*, *::before, *::after { box-sizing: border-box; }
:root { --brand: #b90000; --accent: #f4f1ea; --ink: #1b2431; --muted:
#5b6472; --line: #d9d9d9; }
body { margin: 0; font-family: system-ui, Arial, sans-serif; line-
height: 1.6; color: var(--ink); }
.nf { min-height: 100vh; display: grid; place-content: center; text-
align: center; padding: 2rem 1rem; }
.code { font-size: clamp(5rem, 20vw, 10rem); font-weight: 800; color:
var(--accent); -webkit-text-stroke: 2px var(--brand); margin: 0; line-
height: 1; }
h1 { margin: 0 0 .5rem; }
ul { list-style: none; padding: 0; display: flex; gap: 1rem; justify-
content: center; flex-wrap: wrap; }
form { margin-top: 1.5rem; display: flex; gap: .5rem; justify-content:
 center; flex-wrap: wrap; align-items: center; }
input { padding: .6rem; border: 1px solid #bbb; border-radius: 8px; }
button { padding: .6rem 1rem; border: 0; border-radius: 8px;
```

```
  background: var(--brand); color: #fff; }
```

Project 451 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Page not found - Cairo Book Shop</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main class="nf">	The unique content of this page; exactly one per page.
404	A paragraph of text.
We can't find that page	The main heading; only one per page.
	Unordered (bulleted) list.
Cairo Book Shop home	A hyperlink; href gives the destination.
All books	One list item.
<form action="/search" role="search">	A form; action is where the data goes, method how it is sent.
<label for="q">Search the site</label>	Text label for a control; for matches the control's id, or the label wraps the control.

Line	What it does
<input id="q" name="q" type="search">	Search field.
<button>Search</button>	A clickable button; inside a form it submits by default.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #b90000;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
min-height: 100vh;	At least as tall as the viewport.
display: grid;	Turns the element into a grid container.
place-content: center;	Centres the whole grid content in the container.
text-align: center;	Centres inline content such as text.
padding: 2rem 1rem;	Space inside the element between its border and content.

Declaration	What it does
font-size: clamp(5rem, 20vw, 10rem);	A fluid value between a minimum and a maximum, based on the middle expression.
font-weight: 800;	Thickness of the text.
list-style: none;	Removes bullets or numbers from a list.
display: flex;	Turns the element into a flex container (one-dimensional layout).
gap: 1rem;	Space between grid or flex items without extra margins.
justify-content: center;	Centres items along the main axis.
flex-wrap: wrap;	Allows flex items to move to a new line when they do not fit.
justify-content: center;	The text or empty string for a pseudo-element.
align-items: center;	Centres items on the cross axis.
border: 1px solid #bbb;	Changes the visual order of a flex item without changing the source.
border-radius: 8px;	Rounds the corners.
border: 0;	Removes the default border (for example on an iframe or button).
border-radius: 8px;	The line around the element: width, style and colour.
background: var(--brand);	Background colour or image.

Check your work

- The h1 says what happened in plain words
- Links go to real pages
- Search input has a label
- Looks fine at 320px wide

Exercises

1. Add an illustration as inline SVG.
2. Animate the 404 with a subtle float.
3. Add a 'report broken link' mailto with the current URL from JavaScript.

Theme data for this project

Field	Value
Business	Cairo Book Shop
Tagline	PDF and printed books about web development
City	Giza
Owner	Mohamed Khattab
Brand colour	#b90000
Accent colour	#f4f1ea
Offers	Learn HTML (120 EGP); CSS in Practice (150 EGP); JavaScript Basics (180 EGP); Web Accessibility (95 EGP)

Project 452: 404 error page for Nile Bakery

Theme: Nile Bakery (Cairo) | Level 1 | Files: index.html, styles.css

Brief

Design a friendly 'page not found' screen with a huge outlined 404, helpful links and a search box.

Learning goals

- Centre a block with place-content
- Use huge fluid type with clamp()
- Provide useful next steps on error pages

Elements and CSS used

HTML elements	CSS features
main, p, h1, ul, li, a, form, label, input, button	place-content: center, clamp(), -webkit-text-stroke, line-height, flex-wrap

Build guide

1. Write the page: code, heading, links and search form.
2. Set role="search" on the form.
3. Centre everything with grid and place-content.
4. Make the 404 huge with clamp() and outline it with text-stroke.
5. Lay out links and the form horizontally with wrapping.
6. Name the file 404.html and configure your host to use it.

Project 452 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Page not found - Nile Bakery</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main class="nf">	The unique content of this page; exactly one per page.
404	A paragraph of text.
We can't find that page	The main heading; only one per page.
	Unordered (bulleted) list.
Nile Bakery home	A hyperlink; href gives the destination.
All pastries	One list item.
<form action="/search" role="search">	A form; action is where the data goes, method how it is sent.

Line	What it does
<label for="q">Search the site</label>	Text label for a control; for matches the control's id, or the label wraps the control.
<input id="q" name="q" type="search">	Search field.
<button>Search</button>	A clickable button; inside a form it submits by default.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #a0522d;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
min-height: 100vh;	At least as tall as the viewport.
display: grid;	Turns the element into a grid container.
place-content: center;	Centres the whole grid content in the container.
text-align: center;	Centres inline content such as text.

Declaration	What it does
padding: 2rem 1rem;	Space inside the element between its border and content.
font-size: clamp(5rem, 20vw, 10rem);	A fluid value between a minimum and a maximum, based on the middle expression.
font-weight: 800;	Thickness of the text.
list-style: none;	Removes bullets or numbers from a list.
display: flex;	Turns the element into a flex container (one-dimensional layout).
gap: 1rem;	Space between grid or flex items without extra margins.
justify-content: center;	Centres items along the main axis.
flex-wrap: wrap;	Allows flex items to move to a new line when they do not fit.
justify-content: center;	The text or empty string for a pseudo-element.
align-items: center;	Centres items on the cross axis.
border: 1px solid #bbb;	Changes the visual order of a flex item without changing the source.
border-radius: 8px;	Rounds the corners.
border: 0;	Removes the default border (for example on an iframe or button).
border-radius: 8px;	The line around the element: width, style and colour.
background: var(--brand);	Background colour or image.

Check your work

- The h1 says what happened in plain words
- Links go to real pages

- Search input has a label
- Looks fine at 320px wide

Exercises

1. Add an illustration as inline SVG.
2. Animate the 404 with a subtle float.
3. Add a 'report broken link' mailto with the current URL from JavaScript.

Theme data for this project

Field	Value
Business	Nile Bakery
Tagline	Fresh bread and pastries every morning
City	Cairo
Owner	Sara Adel
Brand colour	#a0522d
Accent colour	#fff6ec
Offers	Sourdough loaf (60 EGP); Croissant (35 EGP); Date cookies (80 EGP); Baklava box (220 EGP)

Project 453: 404 error page for Pyramid Fitness

Theme: Pyramid Fitness (6th of October) | Level 1 | Files: index.html, styles.css

Brief

Design a friendly 'page not found' screen with a huge outlined 404, helpful links and a search box.

Learning goals

- Centre a block with place-content
- Use huge fluid type with clamp()
- Provide useful next steps on error pages

Elements and CSS used

HTML elements	CSS features
main, p, h1, ul, li, a, form, label, input, button	place-content: center, clamp(), -webkit-text-stroke, line-height, flex-wrap

Build guide

1. Write the page: code, heading, links and search form.
2. Set role="search" on the form.
3. Centre everything with grid and place-content.
4. Make the 404 huge with clamp() and outline it with text-stroke.
5. Lay out links and the form horizontally with wrapping.
6. Name the file 404.html and configure your host to use it.

Project 453: index.html

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1">
  <title>Page not found - Pyramid Fitness</title>
  <link rel="stylesheet" href="styles.css">
</head>
<body>
  <main class="nf">
    <p class="code">404</p>
    <h1>We can't find that page</h1>
    <p>The link may be old or the address mistyped. Try one of these
instead:</p>
    <ul>
      <li><a href="index.html">Pyramid Fitness home</a></li>
      <li><a href="classes.html">All classes</a></li>
      <li><a href="contact.html">Contact us</a></li>
    </ul>
    <form action="/search" role="search">
      <label for="q">Search the site</label>
      <input id="q" name="q" type="search">
      <button>Search</button>
    </form>
  </main>
</body>
</html>
```

Project 453: styles.css

```

main, p, h1, ul, li, a, form, label, input, button	place-content: center, clamp(), -webkit-text-stroke, line-height, flex-wrap

Build guide

1. Write the page: code, heading, links and search form.
2. Set role="search" on the form.
3. Centre everything with grid and place-content.
4. Make the 404 huge with clamp() and outline it with text-stroke.
5. Lay out links and the form horizontally with wrapping.
6. Name the file 404.html and configure your host to use it.

Project 456: index.html

```
<!DOCTYPE html>

Project 456 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Page not found - Lotus Language School</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main class="nf">	The unique content of this page; exactly one per page.
404	A paragraph of text.
We can't find that page	The main heading; only one per page.
	Unordered (bulleted) list.
Lotus Language School home	A hyperlink; href gives the destination.
All courses	One list item.
<form action="/search" role="search">	A form; action is where the data goes, method how it is sent.

Line	What it does
<label for="q">Search the site</label>	Text label for a control; for matches the control's id, or the label wraps the control.
<input id="q" name="q" type="search">	Search field.
<button>Search</button>	A clickable button; inside a form it submits by default.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #7c3aed;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
min-height: 100vh;	At least as tall as the viewport.
display: grid;	Turns the element into a grid container.
place-content: center;	Centres the whole grid content in the container.
text-align: center;	Centres inline content such as text.

Declaration	What it does
padding: 2rem 1rem;	Space inside the element between its border and content.
font-size: clamp(5rem, 20vw, 10rem);	A fluid value between a minimum and a maximum, based on the middle expression.
font-weight: 800;	Thickness of the text.
list-style: none;	Removes bullets or numbers from a list.
display: flex;	Turns the element into a flex container (one-dimensional layout).
gap: 1rem;	Space between grid or flex items without extra margins.
justify-content: center;	Centres items along the main axis.
flex-wrap: wrap;	Allows flex items to move to a new line when they do not fit.
justify-content: center;	The text or empty string for a pseudo-element.
align-items: center;	Centres items on the cross axis.
border: 1px solid #bbb;	Changes the visual order of a flex item without changing the source.
border-radius: 8px;	Rounds the corners.
border: 0;	Removes the default border (for example on an iframe or button).
border-radius: 8px;	The line around the element: width, style and colour.
background: var(--brand);	Background colour or image.

Check your work

- The h1 says what happened in plain words
- Links go to real pages

- Search input has a label
- Looks fine at 320px wide

Exercises

1. Add an illustration as inline SVG.
2. Animate the 404 with a subtle float.
3. Add a 'report broken link' mailto with the current URL from JavaScript.

Theme data for this project

Field	Value
Business	Lotus Language School
Tagline	Learn English, French and German in small groups
City	Alexandria
Owner	Nour El Din
Brand colour	#7c3aed
Accent colour	#f5f3ff
Offers	English A1 (1800 EGP); French B1 (2200 EGP); German A2 (2000 EGP); IELTS preparation (3000 EGP)

Project 457: 404 error page for Green Leaf Cafe

Theme: Green Leaf Cafe (Zamalek) | Level 1 | Files: index.html, styles.css

Brief

Design a friendly 'page not found' screen with a huge outlined 404, helpful links and a search box.

Learning goals

- Centre a block with place-content
- Use huge fluid type with clamp()
- Provide useful next steps on error pages

Elements and CSS used

HTML elements	CSS features
main, p, h1, ul, li, a, form, label, input, button	place-content: center, clamp(), -webkit-text-stroke, line-height, flex-wrap

Build guide

1. Write the page: code, heading, links and search form.
2. Set role="search" on the form.
3. Centre everything with grid and place-content.
4. Make the 404 huge with clamp() and outline it with text-stroke.
5. Lay out links and the form horizontally with wrapping.
6. Name the file 404.html and configure your host to use it.

Project 457: index.html

--brand: #111827;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
min-height: 100vh;	At least as tall as the viewport.
display: grid;	Turns the element into a grid container.
place-content: center;	Centres the whole grid content in the container.
text-align: center;	Centres inline content such as text.

Declaration	What it does
padding: 2rem 1rem;	Space inside the element between its border and content.
font-size: clamp(5rem, 20vw, 10rem);	A fluid value between a minimum and a maximum, based on the middle expression.
font-weight: 800;	Thickness of the text.
list-style: none;	Removes bullets or numbers from a list.
display: flex;	Turns the element into a flex container (one-dimensional layout).
gap: 1rem;	Space between grid or flex items without extra margins.
justify-content: center;	Centres items along the main axis.
flex-wrap: wrap;	Allows flex items to move to a new line when they do not fit.
justify-content: center;	The text or empty string for a pseudo-element.
align-items: center;	Centres items on the cross axis.
border: 1px solid #bbb;	Changes the visual order of a flex item without changing the source.
border-radius: 8px;	Rounds the corners.
border: 0;	Removes the default border (for example on an iframe or button).
border-radius: 8px;	The line around the element: width, style and colour.
background: var(--brand);	Background colour or image.

Check your work

- The h1 says what happened in plain words
- Links go to real pages

- Search input has a label
- Looks fine at 320px wide

Exercises

1. Add an illustration as inline SVG.
2. Animate the 404 with a subtle float.
3. Add a 'report broken link' mailto with the current URL from JavaScript.

Theme data for this project

Field	Value
Business	Horizon Photography
Tagline	Portraits, weddings and product photography
City	Maadi
Owner	Adham Nabil
Brand colour	#111827
Accent colour	#f3f4f6
Offers	Portrait session (1200 EGP); Wedding day (15000 EGP); Product shoot (900 EGP); Family session (1500 EGP)

Project 460: 404 error page for Papyrus Stationery

Theme: Papyrus Stationery (Heliopolis) | Level 1 | Files: index.html, styles.css

Brief

Design a friendly 'page not found' screen with a huge outlined 404, helpful links and a search box.

Learning goals

- Centre a block with place-content
- Use huge fluid type with clamp()
- Provide useful next steps on error pages

Elements and CSS used

HTML elements	CSS features
main, p, h1, ul, li, a, form, label, input, button	place-content: center, clamp(), -webkit-text-stroke, line-height, flex-wrap

Build guide

1. Write the page: code, heading, links and search form.
2. Set role="search" on the form.
3. Centre everything with grid and place-content.
4. Make the 404 huge with clamp() and outline it with text-stroke.
5. Lay out links and the form horizontally with wrapping.
6. Name the file 404.html and configure your host to use it.

Project 460: index.html

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1">
  <title>Page not found - Papyrus Stationery</title>
  <link rel="stylesheet" href="styles.css">
</head>
<body>
  <main class="nf">
    <p class="code">404</p>
    <h1>We can't find that page</h1>
    <p>The link may be old or the address mistyped. Try one of these
instead:</p>
    <ul>
      <li><a href="index.html">Papyrus Stationery home</a></li>
      <li><a href="products.html">All products</a></li>
      <li><a href="contact.html">Contact us</a></li>
    </ul>
    <form action="/search" role="search">
      <label for="q">Search the site</label>
      <input id="q" name="q" type="search">
      <button>Search</button>
    </form>
  </main>
</body>
</html>
```

Project 460: styles.css

```
*, *::before, *::after { box-sizing: border-box; }

Project 460 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Page not found - Papyrus Stationery</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main class="nf">	The unique content of this page; exactly one per page.
404	A paragraph of text.
We can't find that page	The main heading; only one per page.
	Unordered (bulleted) list.
Papyrus Stationery home	A hyperlink; href gives the destination.
All products	One list item.
<form action="/search" role="search">	A form; action is where the data goes, method how it is sent.

Line	What it does
<label for="q">Search the site</label>	Text label for a control; for matches the control's id, or the label wraps the control.
<input id="q" name="q" type="search">	Search field.
<button>Search</button>	A clickable button; inside a form it submits by default.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #be185d;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
min-height: 100vh;	At least as tall as the viewport.
display: grid;	Turns the element into a grid container.
place-content: center;	Centres the whole grid content in the container.
text-align: center;	Centres inline content such as text.

Declaration	What it does
padding: 2rem 1rem;	Space inside the element between its border and content.
font-size: clamp(5rem, 20vw, 10rem);	A fluid value between a minimum and a maximum, based on the middle expression.
font-weight: 800;	Thickness of the text.
list-style: none;	Removes bullets or numbers from a list.
display: flex;	Turns the element into a flex container (one-dimensional layout).
gap: 1rem;	Space between grid or flex items without extra margins.
justify-content: center;	Centres items along the main axis.
flex-wrap: wrap;	Allows flex items to move to a new line when they do not fit.
justify-content: center;	The text or empty string for a pseudo-element.
align-items: center;	Centres items on the cross axis.
border: 1px solid #bbb;	Changes the visual order of a flex item without changing the source.
border-radius: 8px;	Rounds the corners.
border: 0;	Removes the default border (for example on an iframe or button).
border-radius: 8px;	The line around the element: width, style and colour.
background: var(--brand);	Background colour or image.

Project 463 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Page not found - Byte Repair</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main class="nf">	The unique content of this page; exactly one per page.
404	A paragraph of text.
We can't find that page	The main heading; only one per page.
	Unordered (bulleted) list.
Byte Repair home	A hyperlink; href gives the destination.
All repairs	One list item.
<form action="/search" role="search">	A form; action is where the data goes, method how it is sent.

Line	What it does
<label for="q">Search the site</label>	Text label for a control; for matches the control's id, or the label wraps the control.
<input id="q" name="q" type="search">	Search field.
<button>Search</button>	A clickable button; inside a form it submits by default.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #0891b2;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
min-height: 100vh;	At least as tall as the viewport.
display: grid;	Turns the element into a grid container.
place-content: center;	Centres the whole grid content in the container.
text-align: center;	Centres inline content such as text.

Declaration	What it does
padding: 2rem 1rem;	Space inside the element between its border and content.
font-size: clamp(5rem, 20vw, 10rem);	A fluid value between a minimum and a maximum, based on the middle expression.
font-weight: 800;	Thickness of the text.
list-style: none;	Removes bullets or numbers from a list.
display: flex;	Turns the element into a flex container (one-dimensional layout).
gap: 1rem;	Space between grid or flex items without extra margins.
justify-content: center;	Centres items along the main axis.
flex-wrap: wrap;	Allows flex items to move to a new line when they do not fit.
justify-content: center;	The text or empty string for a pseudo-element.
align-items: center;	Centres items on the cross axis.
border: 1px solid #bbb;	Changes the visual order of a flex item without changing the source.
border-radius: 8px;	Rounds the corners.
border: 0;	Removes the default border (for example on an iframe or button).
border-radius: 8px;	The line around the element: width, style and colour.
background: var(--brand);	Background colour or image.

Check your work

- The h1 says what happened in plain words
- Links go to real pages

- Search input has a label
- Looks fine at 320px wide

Exercises

1. Add an illustration as inline SVG.
2. Animate the 404 with a subtle float.
3. Add a 'report broken link' mailto with the current URL from JavaScript.

Theme data for this project

Field	Value
Business	Byte Repair
Tagline	Phone and laptop repairs while you wait
City	Nasr City
Owner	Mostafa Gamal
Brand colour	#0891b2
Accent colour	#ecfeff
Offers	Screen replacement (From 800 EGP); Battery swap (From 500 EGP); Laptop cleaning (350 EGP); Data recovery (From 1200 EGP)

Project 464: 404 error page for Sahara Pet Care

Theme: Sahara Pet Care (New Cairo) | Level 1 | Files: index.html, styles.css

Brief

Design a friendly 'page not found' screen with a huge outlined 404, helpful links and a search box.

Learning goals

- Centre a block with place-content
- Use huge fluid type with clamp()
- Provide useful next steps on error pages

Elements and CSS used

HTML elements	CSS features
main, p, h1, ul, li, a, form, label, input, button	place-content: center, clamp(), -webkit-text-stroke, line-height, flex-wrap

Build guide

1. Write the page: code, heading, links and search form.
2. Set role="search" on the form.
3. Centre everything with grid and place-content.
4. Make the 404 huge with clamp() and outline it with text-stroke.
5. Lay out links and the form horizontally with wrapping.
6. Name the file 404.html and configure your host to use it.

Project 464: index.html

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1">
  <title>Page not found - Sahara Pet Care</title>
  <link rel="stylesheet" href="styles.css">
</head>
<body>
  <main class="nf">
    <p class="code">404</p>
    <h1>We can't find that page</h1>
    <p>The link may be old or the address mistyped. Try one of these
instead:</p>
    <ul>
      <li><a href="index.html">Sahara Pet Care home</a></li>
      <li><a href="services.html">All services</a></li>
      <li><a href="contact.html">Contact us</a></li>
    </ul>
    <form action="/search" role="search">
      <label for="q">Search the site</label>
      <input id="q" name="q" type="search">
      <button>Search</button>
    </form>
  </main>
</body>
</html>
```

Project 464: styles.css

```

Offers	Lotus pendant (650 EGP); Brass cuff (420 EGP); Bead earrings (180 EGP); Ankh ring (300 EGP)

Project 467: 404 error page for Fayoum Pottery Studio

Theme: Fayoum Pottery Studio (Tunis Village) | Level 1 | Files: index.html, styles.css

Brief

Design a friendly 'page not found' screen with a huge outlined 404, helpful links and a search box.

Learning goals

- Centre a block with place-content
- Use huge fluid type with clamp()
- Provide useful next steps on error pages

Elements and CSS used

HTML elements	CSS features
main, p, h1, ul, li, a, form, label, input, button	place-content: center, clamp(), -webkit-text-stroke, line-height, flex-wrap

Build guide

1. Write the page: code, heading, links and search form.
2. Set role="search" on the form.
3. Centre everything with grid and place-content.
4. Make the 404 huge with clamp() and outline it with text-stroke.
5. Lay out links and the form horizontally with wrapping.
6. Name the file 404.html and configure your host to use it.

Project 467: index.html

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1">
  <title>Page not found - Fayoum Pottery Studio</title>
  <link rel="stylesheet" href="styles.css">
</head>
<body>
  <main class="nf">
    <p class="code">404</p>
    <h1>We can't find that page</h1>
    <p>The link may be old or the address mistyped. Try one of these
instead:</p>
    <ul>
      <li><a href="index.html">Fayoum Pottery Studio home</a></li>
      <li><a href="workshops.html">All workshops</a></li>
      <li><a href="contact.html">Contact us</a></li>
    </ul>
    <form action="/search" role="search">
      <label for="q">Search the site</label>
      <input id="q" name="q" type="search">
      <button>Search</button>
    </form>
  </main>
</body>
</html>
```

Project 467: styles.css

```
*, *::before, *::after { box-sizing: border-box; }
:root { --brand: #9a3412; --accent: #fff7ed; --ink: #1b2431; --muted:
#5b6472; --line: #d9d9d9; }
body { margin: 0; font-family: system-ui, Arial, sans-serif; line-
height: 1.6; color: var(--ink); }
.nf { min-height: 100vh; display: grid; place-content: center; text-
align: center; padding: 2rem 1rem; }
.code { font-size: clamp(5rem, 20vw, 10rem); font-weight: 800; color:
var(--accent); -webkit-text-stroke: 2px var(--brand); margin: 0; line-
height: 1; }
h1 { margin: 0 0 .5rem; }
ul { list-style: none; padding: 0; display: flex; gap: 1rem; justify-
content: center; flex-wrap: wrap; }
form { margin-top: 1.5rem; display: flex; gap: .5rem; justify-content:
 center; flex-wrap: wrap; align-items: center; }
input { padding: .6rem; border: 1px solid #bbb; border-radius: 8px; }
button { padding: .6rem 1rem; border: 0; border-radius: 8px;
```

```
  background: var(--brand); color: #fff; }
```

Project 467 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Page not found - Fayoum Pottery Studio</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main class="nf">	The unique content of this page; exactly one per page.
404	A paragraph of text.
We can't find that page	The main heading; only one per page.
	Unordered (bulleted) list.
Fayoum Pottery Studio home	A hyperlink; href gives the destination.
All workshops	One list item.
<form action="/search" role="search">	A form; action is where the data goes, method how it is sent.

Line	What it does
<label for="q">Search the site</label>	Text label for a control; for matches the control's id, or the label wraps the control.
<input id="q" name="q" type="search">	Search field.
<button>Search</button>	A clickable button; inside a form it submits by default.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #9a3412;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
min-height: 100vh;	At least as tall as the viewport.
display: grid;	Turns the element into a grid container.
place-content: center;	Centres the whole grid content in the container.
text-align: center;	Centres inline content such as text.

Declaration	What it does
padding: 2rem 1rem;	Space inside the element between its border and content.
font-size: clamp(5rem, 20vw, 10rem);	A fluid value between a minimum and a maximum, based on the middle expression.
font-weight: 800;	Thickness of the text.
list-style: none;	Removes bullets or numbers from a list.
display: flex;	Turns the element into a flex container (one-dimensional layout).
gap: 1rem;	Space between grid or flex items without extra margins.
justify-content: center;	Centres items along the main axis.
flex-wrap: wrap;	Allows flex items to move to a new line when they do not fit.
justify-content: center;	The text or empty string for a pseudo-element.
align-items: center;	Centres items on the cross axis.
border: 1px solid #bbb;	Changes the visual order of a flex item without changing the source.
border-radius: 8px;	Rounds the corners.
border: 0;	Removes the default border (for example on an iframe or button).
border-radius: 8px;	The line around the element: width, style and colour.
background: var(--brand);	Background colour or image.

Check your work

- The h1 says what happened in plain words
- Links go to real pages

- Search input has a label
- Looks fine at 320px wide

Exercises

1. Add an illustration as inline SVG.
2. Animate the 404 with a subtle float.
3. Add a 'report broken link' mailto with the current URL from JavaScript.

Theme data for this project

Field	Value
Business	Fayoum Pottery Studio
Tagline	Wheel throwing and glazing classes
City	Tunis Village
Owner	Ahmed Mahmoud

<form action="/search" role="search">	A form; action is where the data goes, method how it is sent.

Line	What it does
<label for="q">Search the site</label>	Text label for a control; for matches the control's id, or the label wraps the control.
<input id="q" name="q" type="search">	Search field.
<button>Search</button>	A clickable button; inside a form it submits by default.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #4c1d95;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
min-height: 100vh;	At least as tall as the viewport.
display: grid;	Turns the element into a grid container.
place-content: center;	Centres the whole grid content in the container.
text-align: center;	Centres inline content such as text.

Declaration	What it does
padding: 2rem 1rem;	Space inside the element between its border and content.
font-size: clamp(5rem, 20vw, 10rem);	A fluid value between a minimum and a maximum, based on the middle expression.
font-weight: 800;	Thickness of the text.
list-style: none;	Removes bullets or numbers from a list.
display: flex;	Turns the element into a flex container (one-dimensional layout).
gap: 1rem;	Space between grid or flex items without extra margins.
justify-content: center;	Centres items along the main axis.
flex-wrap: wrap;	Allows flex items to move to a new line when they do not fit.
justify-content: center;	The text or empty string for a pseudo-element.
align-items: center;	Centres items on the cross axis.
border: 1px solid #bbb;	Changes the visual order of a flex item without changing the source.
border-radius: 8px;	Rounds the corners.
border: 0;	Removes the default border (for example on an iframe or button).
border-radius: 8px;	The line around the element: width, style and colour.
background: var(--brand);	Background colour or image.

Check your work

- The h1 says what happened in plain words
- Links go to real pages

- Search input has a label
- Looks fine at 320px wide

Exercises

1. Add an illustration as inline SVG.
2. Animate the 404 with a subtle float.
3. Add a 'report broken link' mailto with the current URL from JavaScript.

Theme data for this project

Field	Value
Business	Luxor Music Academy
Tagline	Oud, piano, guitar and voice lessons
City	Luxor
Owner	Salma Ragab
Brand colour	#4c1d95
Accent colour	#f5f3ff
Offers	Oud for beginners (1600 EGP); Piano grade 1 (1800 EGP); Guitar chords (1400 EGP); Voice coaching (1500 EGP)

Project 471: 404 error page for Port Said Seafood

Theme: Port Said Seafood (Port Said) | Level 1 | Files: index.html, styles.css

Brief

Design a friendly 'page not found' screen with a huge outlined 404, helpful links and a search box.

Learning goals

- Centre a block with place-content
- Use huge fluid type with clamp()
- Provide useful next steps on error pages

Elements and CSS used

HTML elements	CSS features
main, p, h1, ul, li, a, form, label, input, button	place-content: center, clamp(), -webkit-text-stroke, line-height, flex-wrap

Build guide

1. Write the page: code, heading, links and search form.
2. Set role="search" on the form.
3. Centre everything with grid and place-content.
4. Make the 404 huge with clamp() and outline it with text-stroke.
5. Lay out links and the form horizontally with wrapping.
6. Name the file 404.html and configure your host to use it.

Project 471: index.html

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1">
  <title>Page not found - Port Said Seafood</title>
  <link rel="stylesheet" href="styles.css">
</head>
<body>
  <main class="nf">
    <p class="code">404</p>
    <h1>We can't find that page</h1>
    <p>The link may be old or the address mistyped. Try one of these
instead:</p>
    <ul>
      <li><a href="index.html">Port Said Seafood home</a></li>
      <li><a href="dishes.html">All dishes</a></li>
      <li><a href="contact.html">Contact us</a></li>
    </ul>
    <form action="/search" role="search">
      <label for="q">Search the site</label>
      <input id="q" name="q" type="search">
      <button>Search</button>
    </form>
  </main>
</body>
</html>
```

Project 471: styles.css

```
*, *::before, *::after { box-sizing: border-box; }

Project 474 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Page not found - Ismailia Cycling Store</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main class="nf">	The unique content of this page; exactly one per page.
404	A paragraph of text.
We can't find that page	The main heading; only one per page.
	Unordered (bulleted) list.
Ismailia Cycling Store home	A hyperlink; href gives the destination.
All bikes	One list item.
<form action="/search" role="search">	A form; action is where the data goes, method how it is sent.
<label for="q">Search the site</label>	Text label for a control; for matches the control's id, or the label wraps the control.

Line	What it does
<input id="q" name="q" type="search">	Search field.
<button>Search</button>	A clickable button; inside a form it submits by default.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #dc2626;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
min-height: 100vh;	At least as tall as the viewport.
display: grid;	Turns the element into a grid container.
place-content: center;	Centres the whole grid content in the container.
text-align: center;	Centres inline content such as text.
padding: 2rem 1rem;	Space inside the element between its border and content.

Declaration	What it does
font-size: clamp(5rem, 20vw, 10rem);	A fluid value between a minimum and a maximum, based on the middle expression.
font-weight: 800;	Thickness of the text.
list-style: none;	Removes bullets or numbers from a list.
display: flex;	Turns the element into a flex container (one-dimensional layout).
gap: 1rem;	Space between grid or flex items without extra margins.
justify-content: center;	Centres items along the main axis.
flex-wrap: wrap;	Allows flex items to move to a new line when they do not fit.
justify-content: center;	The text or empty string for a pseudo-element.
align-items: center;	Centres items on the cross axis.
border: 1px solid #bbb;	Changes the visual order of a flex item without changing the source.
border-radius: 8px;	Rounds the corners.
border: 0;	Removes the default border (for example on an iframe or button).
border-radius: 8px;	The line around the element: width, style and colour.
background: var(--brand);	Background colour or image.

Check your work

- The h1 says what happened in plain words
- Links go to real pages
- Search input has a label
- Looks fine at 320px wide

Exercises

1. Add an illustration as inline SVG.
2. Animate the 404 with a subtle float.
3. Add a 'report broken link' mailto with the current URL from JavaScript.

Theme data for this project

Field	Value
Business	Ismailia Cycling Store
Tagline	Bikes, parts and Friday group rides
City	Ismailia
Owner	Bassem Adly
Brand colour	#dc2626
Accent colour	#fef2f2
Offers	City bike (6500 EGP); Mountain bike (11000 EGP); Kids bike (3200 EGP); Tune-up (250 EGP)

Project 475: 404 error page for Minya Coding Club

Theme: Minya Coding Club (Minya) | Level 1 | Files: index.html, styles.css

Brief

Design a friendly 'page not found' screen with a huge outlined 404, helpful links and a search box.

Learning goals

- Centre a block with place-content
- Use huge fluid type with clamp()
- Provide useful next steps on error pages

Elements and CSS used

HTML elements	CSS features
main, p, h1, ul, li, a, form, label, input, button	place-content: center, clamp(), -webkit-text-stroke, line-height, flex-wrap

Build guide

1. Write the page: code, heading, links and search form.
2. Set role="search" on the form.
3. Centre everything with grid and place-content.
4. Make the 404 huge with clamp() and outline it with text-stroke.
5. Lay out links and the form horizontally with wrapping.
6. Name the file 404.html and configure your host to use it.

Project 475: index.html

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1">
  <title>Page not found - Minya Coding Club</title>
  <link rel="stylesheet" href="styles.css">
</head>
<body>
  <main class="nf">
    <p class="code">404</p>
    <h1>We can't find that page</h1>
    <p>The link may be old or the address mistyped. Try one of these
instead:</p>
    <ul>
      <li><a href="index.html">Minya Coding Club home</a></li>
      <li><a href="workshops.html">All workshops</a></li>
      <li><a href="contact.html">Contact us</a></li>
    </ul>
    <form action="/search" role="search">
      <label for="q">Search the site</label>
      <input id="q" name="q" type="search">
      <button>Search</button>
    </form>
  </main>
</body>
</html>
```

Project 475: styles.css

```

2. Animate the 404 with a subtle float.
3. Add a 'report broken link' mailto with the current URL from JavaScript.

Theme data for this project

Field	Value
Business	Minya Coding Club
Tagline	Free weekend coding for teenagers
City	Minya
Owner	Youssef Hany
Brand colour	#2563eb
Accent colour	#eff6ff
Offers	HTML weekend (Free); CSS art (Free); Scratch games (Free); Hackathon (Free)

Project type: Blog article

Level 2 | 25 projects, one per theme

Write a full blog post with article header metadata, lead paragraph, hero figure, sections, a callout aside and tags in the footer.

Project 476: Blog article for Cairo Book Shop

Theme: Cairo Book Shop (Giza) | Level 2 | Files: index.html, styles.css

Brief

Write a full blog post with article header metadata, lead paragraph, hero figure, sections, a callout aside and tags in the footer.

Learning goals

- Use article, header, footer, aside and time inside a post
- Set up readable long-form typography
- Style a callout and tag pills

Elements and CSS used

HTML elements	CSS features
article, header, time, h1, p, figure, img, figcaption, h2, aside, strong, footer, a	font-family pairs, clamp(), border-left, border-radius partial, display: inline-block

Build guide

1. Write the article structure with header (meta, h1, lead).
2. Add the figure with caption.
3. Write two or three h2 sections.
4. Add the callout aside and the tag footer.
5. Set serif body / sans headings and a 44rem measure.
6. Style the callout and tags.

Project 476: index.html

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #b90000;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.

Declaration	What it does
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 44rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
font-size: 1.1rem;	Size of the text.
font-size: clamp(1.8rem, 4vw, 2.6rem);	A fluid value between a minimum and a maximum, based on the middle expression.
width: 100%;	Fills the container width.
height: auto;	Keeps the natural height, preserving image proportions.
border-radius: 12px;	Rounds the corners.
background: var(--accent);	Background colour or image.
border-left: 4px solid var(--brand);	A thick left border used as an accent stripe.
border-radius: 0 10px 10px 0;	The line around the element: width, style and colour.
border-top: 1px solid var(--line);	A top border used as an accent or separator.
display: inline-block;	Flows in text but accepts width, height and vertical padding.
border-radius: 999px;	Fully rounded pill shape.
text-decoration: none;	Removes the underline from links.

Check your work

- Date has a datetime attribute
- One h1, then h2s
- Figure caption present
- Line length comfortable

Exercises

1. Add a table of contents generated from the h2 ids.
2. Add an author box with an image.
3. Add 'related posts' cards at the end.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #a0522d;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.

Declaration	What it does
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 44rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
font-size: 1.1rem;	Size of the text.
font-size: clamp(1.8rem, 4vw, 2.6rem);	A fluid value between a minimum and a maximum, based on the middle expression.
width: 100%;	Fills the container width.
height: auto;	Keeps the natural height, preserving image proportions.
border-radius: 12px;	Rounds the corners.
background: var(--accent);	Background colour or image.
border-left: 4px solid var(--brand);	A thick left border used as an accent stripe.
border-radius: 0 10px 10px 0;	The line around the element: width, style and colour.
border-top: 1px solid var(--line);	A top border used as an accent or separator.
display: inline-block;	Flows in text but accepts width, height and vertical padding.
border-radius: 999px;	Fully rounded pill shape.
text-decoration: none;	Removes the underline from links.

Check your work

- Date has a datetime attribute
- One h1, then h2s
- Figure caption present
- Line length comfortable

Exercises

1. Add a table of contents generated from the h2 ids.
2. Add an author box with an image.
3. Add 'related posts' cards at the end.

Theme data for this project

Field	Value
Business	Nile Bakery
Tagline	Fresh bread and pastries every morning
City	Cairo
Owner	Sara Adel
Brand colour	#a0522d
Accent colour	#fff6ec
Offers	Sourdough loaf (60 EGP); Croissant (35 EGP); Date cookies (80 EGP); Baklava box (220 EGP)

Project 478: Blog article for Pyramid Fitness

Theme: Pyramid Fitness (6th of October) | Level 2 | Files: index.html, styles.css

Brief

Write a full blog post with article header metadata, lead paragraph, hero figure, sections, a callout aside and tags in the footer.

Learning goals

- Use article, header, footer, aside and time inside a post
- Set up readable long-form typography
- Style a callout and tag pills

Elements and CSS used

HTML elements	CSS features
article, header, time, h1, p, figure, img, figcaption, h2, aside, strong, footer, a	font-family pairs, clamp(), border-left, border-radius partial, display: inline-block

Build guide

1. Write the article structure with header (meta, h1, lead).
2. Add the figure with caption.
3. Write two or three h2 sections.
4. Add the callout aside and the tag footer.
5. Set serif body / sans headings and a 44rem measure.
6. Style the callout and tags.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #0369a1;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.

Declaration	What it does
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 44rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
font-size: 1.1rem;	Size of the text.
font-size: clamp(1.8rem, 4vw, 2.6rem);	A fluid value between a minimum and a maximum, based on the middle expression.
width: 100%;	Fills the container width.
height: auto;	Keeps the natural height, preserving image proportions.
border-radius: 12px;	Rounds the corners.
background: var(--accent);	Background colour or image.
border-left: 4px solid var(--brand);	A thick left border used as an accent stripe.
border-radius: 0 10px 10px 0;	The line around the element: width, style and colour.
border-top: 1px solid var(--line);	A top border used as an accent or separator.
display: inline-block;	Flows in text but accepts width, height and vertical padding.
border-radius: 999px;	Fully rounded pill shape.
text-decoration: none;	Removes the underline from links.

Check your work

- Date has a datetime attribute
- One h1, then h2s
- Figure caption present
- Line length comfortable

Exercises

1. Add a table of contents generated from the h2 ids.
2. Add an author box with an image.
3. Add 'related posts' cards at the end.

Theme data for this project

Field	Value
Business	Red Sea Travel
Tagline	Discover Egypt from desert to reef
City	Hurghada
Owner	Laila Mansour
Brand colour	#0369a1
Accent colour	#f0f9ff
Offers	Luxor day trip (1200 EGP); Snorkelling (700 EGP); Desert safari (900 EGP); Nile cruise (6500 EGP)

Project 481: Blog article for Lotus Language School

Theme: Lotus Language School (Alexandria) | Level 2 | Files: index.html, styles.css

Brief

Write a full blog post with article header metadata, lead paragraph, hero figure, sections, a callout aside and tags in the footer.

Learning goals

- Use article, header, footer, aside and time inside a post
- Set up readable long-form typography
- Style a callout and tag pills

Elements and CSS used

HTML elements	CSS features
article, header, time, h1, p, figure, img, figcaption, h2, aside, strong, footer, a	font-family pairs, clamp(), border-left, border-radius partial, display: inline-block

Build guide

1. Write the article structure with header (meta, h1, lead).
2. Add the figure with caption.
3. Write two or three h2 sections.
4. Add the callout aside and the tag footer.
5. Set serif body / sans headings and a 44rem measure.
6. Style the callout and tags.

Project 481: index.html

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #92400e;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.

Declaration	What it does
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 44rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
font-size: 1.1rem;	Size of the text.
font-size: clamp(1.8rem, 4vw, 2.6rem);	A fluid value between a minimum and a maximum, based on the middle expression.
width: 100%;	Fills the container width.
height: auto;	Keeps the natural height, preserving image proportions.
border-radius: 12px;	Rounds the corners.
background: var(--accent);	Background colour or image.
border-left: 4px solid var(--brand);	A thick left border used as an accent stripe.
border-radius: 0 10px 10px 0;	The line around the element: width, style and colour.
border-top: 1px solid var(--line);	A top border used as an accent or separator.
display: inline-block;	Flows in text but accepts width, height and vertical padding.
border-radius: 999px;	Fully rounded pill shape.
text-decoration: none;	Removes the underline from links.

Check your work

- Date has a datetime attribute
- One h1, then h2s
- Figure caption present
- Line length comfortable

Exercises

1. Add a table of contents generated from the h2 ids.
2. Add an author box with an image.
3. Add 'related posts' cards at the end.

Theme data for this project

Field	Value
Business	Sinai Trekking Club
Tagline	Guided mountain walks for every level
City	Saint Catherine
Owner	Yara Hamdy
Brand colour	#92400e
Accent colour	#fffbeb
Offers	Mount Sinai sunrise (400 EGP); Blue Desert loop (250 EGP); Wadi Gnai (300 EGP); Three-day traverse (1900 EGP)

Project 484: Blog article for Horizon Photography

Theme: Horizon Photography (Maadi) | Level 2 | Files: index.html, styles.css

Brief

Write a full blog post with article header metadata, lead paragraph, hero figure, sections, a callout aside and tags in the footer.

Learning goals

- Use article, header, footer, aside and time inside a post
- Set up readable long-form typography
- Style a callout and tag pills

Elements and CSS used

HTML elements	CSS features
article, header, time, h1, p, figure, img, figcaption, h2, aside, strong, footer, a	font-family pairs, clamp(), border-left, border-radius partial, display: inline-block

Build guide

1. Write the article structure with header (meta, h1, lead).
2. Add the figure with caption.
3. Write two or three h2 sections.
4. Add the callout aside and the tag footer.
5. Set serif body / sans headings and a 44rem measure.
6. Style the callout and tags.

Project 484: index.html

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #15803d;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.

Declaration	What it does
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 44rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
font-size: 1.1rem;	Size of the text.
font-size: clamp(1.8rem, 4vw, 2.6rem);	A fluid value between a minimum and a maximum, based on the middle expression.
width: 100%;	Fills the container width.
height: auto;	Keeps the natural height, preserving image proportions.
border-radius: 12px;	Rounds the corners.
background: var(--accent);	Background colour or image.
border-left: 4px solid var(--brand);	A thick left border used as an accent stripe.
border-radius: 0 10px 10px 0;	The line around the element: width, style and colour.
border-top: 1px solid var(--line);	A top border used as an accent or separator.
display: inline-block;	Flows in text but accepts width, height and vertical padding.
border-radius: 999px;	Fully rounded pill shape.
text-decoration: none;	Removes the underline from links.

Check your work

- Date has a datetime attribute
- One h1, then h2s
- Figure caption present
- Line length comfortable

Exercises

1. Add a table of contents generated from the h2 ids.
2. Add an author box with an image.
3. Add 'related posts' cards at the end.

Theme data for this project

Field	Value
Business	Oasis Plant Nursery
Tagline	Indoor plants and gardening advice
City	Sheikh Zayed
Owner	Hossam Ali
Brand colour	#15803d
Accent colour	#f7fee7
Offers	Monstera (250 EGP); Snake plant (120 EGP); Basil pot (45 EGP); Olive tree (600 EGP)

Project 487: Blog article for Cedar Furniture

Theme: Cedar Furniture (Damietta) | Level 2 | Files: index.html, styles.css

Brief

Write a full blog post with article header metadata, lead paragraph, hero figure, sections, a callout aside and tags in the footer.

Learning goals

- Use article, header, footer, aside and time inside a post
- Set up readable long-form typography
- Style a callout and tag pills

Elements and CSS used

HTML elements	CSS features
article, header, time, h1, p, figure, img, figcaption, h2, aside, strong, footer, a	font-family pairs, clamp(), border-left, border-radius partial, display: inline-block

Build guide

1. Write the article structure with header (meta, h1, lead).
2. Add the figure with caption.
3. Write two or three h2 sections.
4. Add the callout aside and the tag footer.
5. Set serif body / sans headings and a 44rem measure.
6. Style the callout and tags.

Project 487: index.html

Declaration	What it does
color: var(--ink);	Text colour.
max-width: 44rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
font-size: 1.1rem;	Size of the text.
font-size: clamp(1.8rem, 4vw, 2.6rem);	A fluid value between a minimum and a maximum, based on the middle expression.
width: 100%;	Fills the container width.
height: auto;	Keeps the natural height, preserving image proportions.
border-radius: 12px;	Rounds the corners.
background: var(--accent);	Background colour or image.
border-left: 4px solid var(--brand);	A thick left border used as an accent stripe.
border-radius: 0 10px 10px 0;	The line around the element: width, style and colour.
border-top: 1px solid var(--line);	A top border used as an accent or separator.
display: inline-block;	Flows in text but accepts width, height and vertical padding.
border-radius: 999px;	Fully rounded pill shape.
text-decoration: none;	Removes the underline from links.

Check your work

- Date has a datetime attribute
- One h1, then h2s
- Figure caption present

- Line length comfortable

Exercises

1. Add a table of contents generated from the h2 ids.
2. Add an author box with an image.
3. Add 'related posts' cards at the end.

Theme data for this project

Field	Value
Business	Sahara Pet Care
Tagline	Grooming, boarding and vet visits
City	New Cairo
Owner	Rana Ibrahim
Brand colour	#c2410c
Accent colour	#fff7ed
Offers	Full grooming (400 EGP); Day boarding (250 EGP); Vaccination (300 EGP); Dog walking (100 EGP)

Project 490: Blog article for Alexandria Sailing School

Theme: Alexandria Sailing School (Alexandria) | Level 2 | Files: index.html, styles.css

Brief

Write a full blog post with article header metadata, lead paragraph, hero figure, sections, a callout aside and tags in the footer.

Learning goals

- Use article, header, footer, aside and time inside a post
- Set up readable long-form typography
- Style a callout and tag pills

Elements and CSS used

HTML elements	CSS features
article, header, time, h1, p, figure, img, figcaption, h2, aside, strong, footer, a	font-family pairs, clamp(), border-left, border-radius partial, display: inline-block

Build guide

1. Write the article structure with header (meta, h1, lead).
2. Add the figure with caption.
3. Write two or three h2 sections.
4. Add the callout aside and the tag footer.
5. Set serif body / sans headings and a 44rem measure.
6. Style the callout and tags.

border-left: 4px solid var(--brand);	A thick left border used as an accent stripe.
border-radius: 0 10px 10px 0;	The line around the element: width, style and colour.
border-top: 1px solid var(--line);	A top border used as an accent or separator.
display: inline-block;	Flows in text but accepts width, height and vertical padding.
border-radius: 999px;	Fully rounded pill shape.
text-decoration: none;	Removes the underline from links.

Check your work

- Date has a datetime attribute
- One h1, then h2s
- Figure caption present
- Line length comfortable

Exercises

1. Add a table of contents generated from the h2 ids.
2. Add an author box with an image.
3. Add 'related posts' cards at the end.

Theme data for this project

Field	Value
Business	Fayoum Pottery Studio
Tagline	Wheel throwing and glazing classes
City	Tunis Village
Owner	Ahmed Mahmoud
Brand colour	#9a3412
Accent colour	#fff7ed
Offers	Intro to the wheel (450 EGP); Glazing day (300 EGP); Kids clay class (200 EGP); Weekend retreat (2500 EGP)

Project 493: Blog article for Cleopatra Beauty Salon

Theme: Cleopatra Beauty Salon (Dokki) | Level 2 | Files: index.html, styles.css

Brief

Write a full blog post with article header metadata, lead paragraph, hero figure, sections, a callout aside and tags in the footer.

Learning goals

- Use article, header, footer, aside and time inside a post
- Set up readable long-form typography
- Style a callout and tag pills

Elements and CSS used

HTML elements	CSS features
article, header, time, h1, p, figure, img, figcaption, h2, aside, strong, footer, a	font-family pairs, clamp(), border-left, border-radius partial, display: inline-block

Build guide

1. Write the article structure with header (meta, h1, lead).
2. Add the figure with caption.
3. Write two or three h2 sections.
4. Add the callout aside and the tag footer.
5. Set serif body / sans headings and a 44rem measure.
6. Style the callout and tags.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #db2777;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.

Declaration	What it does
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 44rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
font-size: 1.1rem;	Size of the text.
font-size: clamp(1.8rem, 4vw, 2.6rem);	A fluid value between a minimum and a maximum, based on the middle expression.
width: 100%;	Fills the container width.
height: auto;	Keeps the natural height, preserving image proportions.
border-radius: 12px;	Rounds the corners.
background: var(--accent);	Background colour or image.
border-left: 4px solid var(--brand);	A thick left border used as an accent stripe.
border-radius: 0 10px 10px 0;	The line around the element: width, style and colour.
border-top: 1px solid var(--line);	A top border used as an accent or separator.
display: inline-block;	Flows in text but accepts width, height and vertical padding.
border-radius: 999px;	Fully rounded pill shape.
text-decoration: none;	Removes the underline from links.

- Date has a datetime attribute
- One h1, then h2s
- Figure caption present
- Line length comfortable

Exercises

1. Add a table of contents generated from the h2 ids.
2. Add an author box with an image.
3. Add 'related posts' cards at the end.

Theme data for this project

Field	Value
Business	Luxor Music Academy
Tagline	Oud, piano, guitar and voice lessons
City	Luxor
Owner	Salma Ragab
Brand colour	#4c1d95
Accent colour	#f5f3ff
Offers	Oud for beginners (1600 EGP); Piano grade 1 (1800 EGP); Guitar chords (1400 EGP); Voice coaching (1500 EGP)

Project 496: Blog article for Port Said Seafood

Theme: Port Said Seafood (Port Said) | Level 2 | Files: index.html, styles.css

Brief

Write a full blog post with article header metadata, lead paragraph, hero figure, sections, a callout aside and tags in the footer.

Learning goals

- Use article, header, footer, aside and time inside a post
- Set up readable long-form typography
- Style a callout and tag pills

Elements and CSS used

HTML elements	CSS features
article, header, time, h1, p, figure, img, figcaption, h2, aside, strong, footer, a	font-family pairs, clamp(), border-left, border-radius partial, display: inline-block

Build guide

1. Write the article structure with header (meta, h1, lead).
2. Add the figure with caption.
3. Write two or three h2 sections.
4. Add the callout aside and the tag footer.
5. Set serif body / sans headings and a 44rem measure.
6. Style the callout and tags.

Project 496: index.html

Project 496 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Why we love Grilled sea bass - Port Said Seafood blog</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
<article class="post">	A self-contained piece: card, post, product.
<header>	Introductory content: logo, title, navigation.
<p class="meta"><time datetime="2026-09-01">1 September 2026</time>...	A paragraph of text.
Why we love Grilled sea bass	The main heading; only one per page.
<figure>	Self-contained media with an optional caption.

Line	What it does
<img src="images/restaurant-1.jpg" alt="Grilled sea bass" width="12...	An image; alt describes it, width and height reserve space before it loads.
<figcaption>Grilled sea bass, photographed in Port Said.</figcaption>	Caption for the figure.
How it started	Second-level heading for a section.
<aside class="callout">Tip: Ask for it early in th...	Content related to, but separate from, the main content.
<p>Grilled sea bass is available now for 320 EGP. <a href="dishes.h...	A hyperlink; href gives the destination.
<footer class="tags">Tags: restaurant <a href="#">n...	Footer of the page or of a section.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #0e7490;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.

Declaration	What it does
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 44rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
font-size: 1.1rem;	Size of the text.
font-size: clamp(1.8rem, 4vw, 2.6rem);	A fluid value between a minimum and a maximum, based on the middle expression.
width: 100%;	Fills the container width.
height: auto;	Keeps the natural height, preserving image proportions.
border-radius: 12px;	Rounds the corners.
background: var(--accent);	Background colour or image.
border-left: 4px solid var(--brand);	A thick left border used as an accent stripe.
border-radius: 0 10px 10px 0;	The line around the element: width, style and colour.
border-top: 1px solid var(--line);	A top border used as an accent or separator.
display: inline-block;	Flows in text but accepts width, height and vertical padding.
border-radius: 999px;	Fully rounded pill shape.
text-decoration: none;	Removes the underline from links.

Check your work

Project 499: Blog article for Ismailia Cycling Store

Theme: Ismailia Cycling Store (Ismailia) | Level 2 | Files: index.html, styles.css

Brief

Write a full blog post with article header metadata, lead paragraph, hero figure, sections, a callout aside and tags in the footer.

Learning goals

- Use article, header, footer, aside and time inside a post
- Set up readable long-form typography
- Style a callout and tag pills

Elements and CSS used

HTML elements	CSS features
article, header, time, h1, p, figure, img, figcaption, h2, aside, strong, footer, a	font-family pairs, clamp(), border-left, border-radius partial, display: inline-block

Build guide

1. Write the article structure with header (meta, h1, lead).
2. Add the figure with caption.
3. Write two or three h2 sections.
4. Add the callout aside and the tag footer.
5. Set serif body / sans headings and a 44rem measure.
6. Style the callout and tags.

Project 499: index.html

```

Project 499 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Why we love City bike - Ismailia Cycling Store blog</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
<article class="post">	A self-contained piece: card, post, product.
<header>	Introductory content: logo, title, navigation.
<p class="meta"><time datetime="2026-09-01">1 September 2026</time>...	A paragraph of text.
Why we love City bike	The main heading; only one per page.
<figure>	Self-contained media with an optional caption.

Line	What it does
<img src="images/cycling-1.jpg" alt="City bike" width="1200" height...	An image; alt describes it, width and height reserve space before it loads.
<figcaption>City bike, photographed in Ismailia.</figcaption>	Caption for the figure.
How it started	Second-level heading for a section.
<aside class="callout">Tip: Ask for it early in th...	Content related to, but separate from, the main content.
<p>City bike is available now for 6500 EGP. <a href="bikes.html">Se...	A hyperlink; href gives the destination.
<footer class="tags">Tags: cycling <a href="#">news...	Footer of the page or of a section.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #dc2626;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.

Declaration	What it does
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 44rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
font-size: 1.1rem;	Size of the text.
font-size: clamp(1.8rem, 4vw, 2.6rem);	A fluid value between a minimum and a maximum, based on the middle expression.
width: 100%;	Fills the container width.
height: auto;	Keeps the natural height, preserving image proportions.
border-radius: 12px;	Rounds the corners.
background: var(--accent);	Background colour or image.
border-left: 4px solid var(--brand);	A thick left border used as an accent stripe.
border-radius: 0 10px 10px 0;	The line around the element: width, style and colour.
border-top: 1px solid var(--line);	A top border used as an accent or separator.
display: inline-block;	Flows in text but accepts width, height and vertical padding.
border-radius: 999px;	Fully rounded pill shape.
text-decoration: none;	Removes the underline from links.

Check your work

- Date has a datetime attribute
- One h1, then h2s
- Figure caption present
- Line length comfortable

Exercises

1. Add a table of contents generated from the h2 ids.
2. Add an author box with an image.
3. Add 'related posts' cards at the end.

Theme data for this project

Field	Value
Business	Ismailia Cycling Store
Tagline	Bikes, parts and Friday group rides
City	Ismailia
Owner	Bassem Adly
Brand colour	#dc2626
Accent colour	#fef2f2
Offers	City bike (6500 EGP); Mountain bike (11000 EGP); Kids bike (3200 EGP); Tune-up (250 EGP)

Project 500: Blog article for Minya Coding Club

Theme: Minya Coding Club (Minya) | Level 2 | Files: index.html, styles.css

Brief

Write a full blog post with article header metadata, lead paragraph, hero figure, sections, a callout aside and tags in the footer.

Learning goals

- Use article, header, footer, aside and time inside a post
- Set up readable long-form typography
- Style a callout and tag pills

Project type: Weekly schedule grid

Level 2 | 25 projects, one per theme

Build a timetable as a table with separate, rounded cells where booked slots are highlighted with :not(:empty).

Project 501: Weekly schedule grid for Cairo Book Shop

Theme: Cairo Book Shop (Giza) | Level 2 | Files: index.html, styles.css

Brief

Build a timetable as a table with separate, rounded cells where booked slots are highlighted with :not(:empty).

Learning goals

- Use the separate border model with border-spacing
- Highlight cells based on content with :empty
- Keep a wide table scrollable

Elements and CSS used

HTML elements	CSS features
table, caption, thead, tbody, tr, th, td	border-collapse: separate, border-spacing, :not(:empty), border-radius on cells, min-width

Build guide

1. Write the header row with the days.
2. Write one row per time slot; the first cell is th scope="row".
3. Leave empty <td></td> for free slots.
4. Use border-collapse: separate and border-spacing so cells look like tiles.
5. Style non-empty cells with :not(:empty).
6. Wrap for horizontal scrolling.

Project 501: index.html

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1">
  <title>Cairo Book Shop - Weekly schedule</title>
  <link rel="stylesheet" href="styles.css">
</head>
<body>
  <main>
    <h1>Weekly schedule</h1>
    <div class="wrap">
      <table class="schedule">
        <caption>Books by day and time</caption>
        <thead><tr><th scope="col">Time</th><th scope="col">Sat</
th><th scope="col">Sun</th><th scope="col">Mon</th><th
scope="col">Tue</th><th scope="col">Wed</th></tr></thead>
        <tbody>
          <tr><th scope="row">9:00</th><td>Learn HTML</td><td></
td><td>Learn HTML</td><td></td><td>Learn HTML</td></tr>
          <tr><th scope="row">11:00</th><td></td><td>CSS in Practice</
td><td></td><td>CSS in Practice</td><td></td></tr>
          <tr><th scope="row">13:00</th><td>JavaScript Basics</
td><td></td><td>JavaScript Basics</td><td></td><td>JavaScript Basics</

body { margin: 0; font-family: system-ui, Arial, sans-serif; line-
height: 1.6; color: var(--ink); }
main { max-width: 60rem; margin: 2rem auto; padding: 0 1rem; }
.wrap { overflow-x: auto; }
.schedule { border-collapse: separate; border-spacing: 4px; width:
100%; min-width: 36rem; }
.schedule th { background: var(--brand); color: #fff; padding: .5rem;
border-radius: 6px; }
```

```
.schedule tbody th { background: var(--accent); color: var(--ink); }
.schedule td { padding: .6rem; border-radius: 6px; text-align: center;
 background: #f6f6f6; min-height: 3rem; }
.schedule td:not(:empty) { background: var(--accent); font-weight:
600; border: 2px solid var(--brand); }
```

Project 501 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Cairo Book Shop - Weekly schedule</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
Weekly schedule	The main heading; only one per page.
	Generic block container for grouping and layout.
<table class="schedule">	Tabular data in rows and columns.
<caption>Books by day and time</caption>	Title of the table.
<thead><tr><th scope="col">Time</th><th scope="col">Sat</th><th sco...	Group of header rows.
<tbody>	Group of data rows.

Line	What it does
<tr><th scope="row">9:00</th><td>Learn HTML</td><td></td><td>Learn ...	A table row.
<tr><th scope="row">11:00</th><td></td><td>CSS in Practice</td><td>...	Header cell for a row.
<tr><th scope="row">13:00</th><td>JavaScript Basics</td><td></td><td><t...	A header cell.
<tr><th scope="row">15:00</th><td></td><td>Web Accessibility</td><td><t...	A data cell.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #b90000;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.

Declaration	What it does
max-width: 60rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
overflow-x: auto;	Adds a horizontal scrollbar only when needed (responsive tables).
border-collapse: separate;	Keeps each cell's border separate so cells look like tiles.
border-spacing: 4px;	Gap between cells in the separate border model.
width: 100%;	Fills the container width.
background: var(--brand);	Background colour or image.
border-radius: 6px;	Rounds the corners.
border-radius: 6px;	The line around the element: width, style and colour.
text-align: center;	Centres inline content such as text.
.schedule td:not(:empty) {	Excludes elements from a selector.
font-weight: 600;	Thickness of the text.
border: 2px solid var(--brand);	Changes the visual order of a flex item without changing the source.

Check your work

- Every cell exists even if empty
- Row and column headers have scope
- Tiles have rounded corners
- Table scrolls on narrow screens

Exercises

1. Add rowspan for a two-hour slot.

2. Colour by category with classes.
3. Make the time column sticky with position: sticky; left: 0.

Theme data for this project

Field	Value
Business	Cairo Book Shop

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #a0522d;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.

Declaration	What it does
max-width: 60rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
overflow-x: auto;	Adds a horizontal scrollbar only when needed (responsive tables).
border-collapse: separate;	Keeps each cell's border separate so cells look like tiles.
border-spacing: 4px;	Gap between cells in the separate border model.
width: 100%;	Fills the container width.
background: var(--brand);	Background colour or image.
border-radius: 6px;	Rounds the corners.
border-radius: 6px;	The line around the element: width, style and colour.
text-align: center;	Centres inline content such as text.
.schedule td:not(:empty) {	Excludes elements from a selector.
font-weight: 600;	Thickness of the text.
border: 2px solid var(--brand);	Changes the visual order of a flex item without changing the source.

Check your work

- Every cell exists even if empty
- Row and column headers have scope
- Tiles have rounded corners
- Table scrolls on narrow screens

Exercises

1. Add rowspan for a two-hour slot.

2. Colour by category with classes.
3. Make the time column sticky with position: sticky; left: 0.

Theme data for this project

Field	Value
Business	Nile Bakery
Tagline	Fresh bread and pastries every morning
City	Cairo
Owner	Sara Adel
Brand colour	#a0522d
Accent colour	#fff6ec
Offers	Sourdough loaf (60 EGP); Croissant (35 EGP); Date cookies (80 EGP); Baklava box (220 EGP)

Project 503: Weekly schedule grid for Pyramid Fitness

Theme: Pyramid Fitness (6th of October) | Level 2 | Files: index.html, styles.css

Brief

Build a timetable as a table with separate, rounded cells where booked slots are highlighted with :not(:empty).

Learning goals

- Use the separate border model with border-spacing
- Highlight cells based on content with :empty
- Keep a wide table scrollable

Elements and CSS used

HTML elements	CSS features
table, caption, thead, tbody, tr, th, td	border-collapse: separate, border-spacing, :not(:empty), border-radius on cells, min-width

Build guide

1. Write the header row with the days.
2. Write one row per time slot; the first cell is th scope="row".
3. Leave empty <td></td> for free slots.
4. Use border-collapse: separate and border-spacing so cells look like tiles.
5. Style non-empty cells with :not(:empty).
6. Wrap for horizontal scrolling.

Project 503: index.html

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="utf-8">

Elements and CSS used

HTML elements	CSS features
table, caption, thead, tbody, tr, th, td	border-collapse: separate, border-spacing, :not(:empty), border-radius on cells, min-width

Build guide

1. Write the header row with the days.
2. Write one row per time slot; the first cell is th scope="row".
3. Leave empty <td></td> for free slots.
4. Use border-collapse: separate and border-spacing so cells look like tiles.
5. Style non-empty cells with :not(:empty).

6. Wrap for horizontal scrolling.

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Lotus Language School - Weekly schedule</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
Weekly schedule	The main heading; only one per page.
	Generic block container for grouping and layout.
<table class="schedule">	Tabular data in rows and columns.
<caption>Courses by day and time</caption>	Title of the table.
<thead><tr><th scope="col">Time</th><th scope="col">Sat</th><th sco...	Group of header rows.
<tbody>	Group of data rows.

Line	What it does
<tr><th scope="row">9:00</th><td>English A1</td><td></td><td>Englis...	A table row.
<tr><th scope="row">11:00</th><td></td><td>French B1</td><td></td><...	Header cell for a row.
<tr><th scope="row">13:00</th><td>German A2</td><td></td><td>German...	A header cell.
<tr><th scope="row">15:00</th><td></td><td>IELTS preparation</td><t...	A data cell.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #7c3aed;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.

Declaration	What it does
max-width: 60rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
overflow-x: auto;	Adds a horizontal scrollbar only when needed (responsive tables).
border-collapse: separate;	Keeps each cell's border separate so cells look like tiles.
border-spacing: 4px;	Gap between cells in the separate border model.
width: 100%;	Fills the container width.
background: var(--brand);	Background colour or image.
border-radius: 6px;	Rounds the corners.
border-radius: 6px;	The line around the element: width, style and colour.
text-align: center;	Centres inline content such as text.
.schedule td:not(:empty) {	Excludes elements from a selector.
font-weight: 600;	Thickness of the text.
border: 2px solid var(--brand);	Changes the visual order of a flex item without changing the source.

Check your work

- Every cell exists even if empty
- Row and column headers have scope
- Tiles have rounded corners
- Table scrolls on narrow screens

Exercises

1. Add rowspan for a two-hour slot.

2. Colour by category with classes.
3. Make the time column sticky with position: sticky; left: 0.

Theme data for this project

max-width: 60rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
overflow-x: auto;	Adds a horizontal scrollbar only when needed (responsive tables).
border-collapse: separate;	Keeps each cell's border separate so cells look like tiles.
border-spacing: 4px;	Gap between cells in the separate border model.
width: 100%;	Fills the container width.
background: var(--brand);	Background colour or image.
border-radius: 6px;	Rounds the corners.
border-radius: 6px;	The line around the element: width, style and colour.
text-align: center;	Centres inline content such as text.
.schedule td:not(:empty) {	Excludes elements from a selector.
font-weight: 600;	Thickness of the text.
border: 2px solid var(--brand);	Changes the visual order of a flex item without changing the source.

Check your work

- Every cell exists even if empty
- Row and column headers have scope
- Tiles have rounded corners
- Table scrolls on narrow screens

Exercises

1. Add rowspan for a two-hour slot.

2. Colour by category with classes.
3. Make the time column sticky with position: sticky; left: 0.

Theme data for this project

Field	Value
Business	Horizon Photography
Tagline	Portraits, weddings and product photography
City	Maadi
Owner	Adham Nabil
Brand colour	#111827
Accent colour	#f3f4f6
Offers	Portrait session (1200 EGP); Wedding day (15000 EGP); Product shoot (900 EGP); Family session (1500 EGP)

Project 510: Weekly schedule grid for Papyrus Stationery

Theme: Papyrus Stationery (Heliopolis) | Level 2 | Files: index.html, styles.css

Brief

Build a timetable as a table with separate, rounded cells where booked slots are highlighted with :not(:empty).

Learning goals

- Use the separate border model with border-spacing
- Highlight cells based on content with :empty
- Keep a wide table scrollable

Elements and CSS used

HTML elements	CSS features
table, caption, thead, tbody, tr, th, td	border-collapse: separate, border-spacing, :not(:empty), border-radius on cells, min-width

Build guide

1. Write the header row with the days.
2. Write one row per time slot; the first cell is th scope="row".
3. Leave empty <td></td> for free slots.
4. Use border-collapse: separate and border-spacing so cells look like tiles.
5. Style non-empty cells with :not(:empty).
6. Wrap for horizontal scrolling.

Project 510: index.html

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1">
  <title>Papyrus Stationery - Weekly schedule</title>
  <link rel="stylesheet" href="styles.css">
</head>
<body>
  <main>
    <h1>Weekly schedule</h1>
    <div class="wrap">
      <table class="schedule">
        <caption>Products by day and time</caption>
        <thead><tr><th scope="col">Time</th><th scope="col">Sat</

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #0891b2;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.

Declaration	What it does
max-width: 60rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
overflow-x: auto;	Adds a horizontal scrollbar only when needed (responsive tables).
border-collapse: separate;	Keeps each cell's border separate so cells look like tiles.
border-spacing: 4px;	Gap between cells in the separate border model.
width: 100%;	Fills the container width.
background: var(--brand);	Background colour or image.
border-radius: 6px;	Rounds the corners.
border-radius: 6px;	The line around the element: width, style and colour.
text-align: center;	Centres inline content such as text.
.schedule td:not(:empty) {	Excludes elements from a selector.
font-weight: 600;	Thickness of the text.
border: 2px solid var(--brand);	Changes the visual order of a flex item without changing the source.

Check your work

- Every cell exists even if empty
- Row and column headers have scope
- Tiles have rounded corners
- Table scrolls on narrow screens

Exercises

1. Add rowspan for a two-hour slot.

2. Colour by category with classes.
3. Make the time column sticky with position: sticky; left: 0.

Theme data for this project

Field	Value
Business	Byte Repair
Tagline	Phone and laptop repairs while you wait
City	Nasr City
Owner	Mostafa Gamal
Brand colour	#0891b2
Accent colour	#ecfeff
Offers	Screen replacement (From 800 EGP); Battery swap (From 500 EGP); Laptop cleaning (350 EGP); Data recovery (From 1200 EGP)

Project 514: Weekly schedule grid for Sahara Pet Care

Theme: Sahara Pet Care (New Cairo) | Level 2 | Files: index.html, styles.css

Brief

Build a timetable as a table with separate, rounded cells where booked slots are highlighted with :not(:empty).

Learning goals

- Use the separate border model with border-spacing
- Highlight cells based on content with :empty
- Keep a wide table scrollable

Elements and CSS used

HTML elements	CSS features
table, caption, thead, tbody, tr, th, td	border-collapse: separate, border-spacing, :not(:empty), border-radius on cells, min-width

Build guide

1. Write the header row with the days.
2. Write one row per time slot; the first cell is th scope="row".
3. Leave empty <td></td> for free slots.
4. Use border-collapse: separate and border-spacing so cells look like tiles.
5. Style non-empty cells with :not(:empty).
6. Wrap for horizontal scrolling.

Project 514: index.html

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1">
  <title>Sahara Pet Care - Weekly schedule</title>
  <link rel="stylesheet" href="styles.css">
</head>
<body>
  <main>
    <h1>Weekly schedule</h1>
    <div class="wrap">
      <table class="schedule">
        <caption>Services by day and time</caption>
        <thead><tr><th scope="col">Time</th><th scope="col">Sat</

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Fayoum Pottery Studio - Weekly schedule</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
Weekly schedule	The main heading; only one per page.
	Generic block container for grouping and layout.
<table class="schedule">	Tabular data in rows and columns.
<caption>Workshops by day and time</caption>	Title of the table.
<thead><tr><th scope="col">Time</th><th scope="col">Sat</th><th sco...	Group of header rows.
<tbody>	Group of data rows.

Line	What it does
<tr><th scope="row">9:00</th><td>Intro to the wheel</td><td></td><t...	A table row.
<tr><th scope="row">11:00</th><td></td><td>Glazing day</td><td></td...	Header cell for a row.
<tr><th scope="row">13:00</th><td>Kids clay class</td><td></td><td>...	A header cell.
<tr><th scope="row">15:00</th><td></td><td>Weekend retreat</td><td>...	A data cell.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #9a3412;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.

Declaration	What it does
max-width: 60rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
overflow-x: auto;	Adds a horizontal scrollbar only when needed (responsive tables).
border-collapse: separate;	Keeps each cell's border separate so cells look like tiles.
border-spacing: 4px;	Gap between cells in the separate border model.
width: 100%;	Fills the container width.
background: var(--brand);	Background colour or image.
border-radius: 6px;	Rounds the corners.
border-radius: 6px;	The line around the element: width, style and colour.
text-align: center;	Centres inline content such as text.
.schedule td:not(:empty) {	Excludes elements from a selector.
font-weight: 600;	Thickness of the text.
border: 2px solid var(--brand);	Changes the visual order of a flex item without changing the source.

Check your work

- Every cell exists even if empty
- Row and column headers have scope
- Tiles have rounded corners
- Table scrolls on narrow screens

Exercises

1. Add rowspan for a two-hour slot.

2. Colour by category with classes.
3. Make the time column sticky with position: sticky; left: 0.

Theme data for this project

Field	Value
Business	Fayoum Pottery Studio
Tagline	Wheel throwing and glazing classes
City	Tunis Village
Owner	Ahmed Mahmoud
Brand colour	#9a3412
Accent colour	#fff7ed
Offers	Intro to the wheel (450 EGP); Glazing day (300 EGP); Kids clay class (200 EGP); Weekend retreat (2500 EGP)

Project 518: Weekly schedule grid for Cleopatra Beauty Salon

Theme: Cleopatra Beauty Salon (Dokki) | Level 2 | Files: index.html, styles.css

Brief

Build a timetable as a table with separate, rounded cells where booked slots are highlighted with :not(:empty).

Learning goals

- Use the separate border model with border-spacing
- Highlight cells based on content with :empty
- Keep a wide table scrollable

Elements and CSS used

HTML elements	CSS features
table, caption, thead, tbody, tr, th, td	border-collapse: separate, border-spacing, :not(:empty), border-radius on cells, min-width

Build guide

1. Write the header row with the days.
2. Write one row per time slot; the first cell is th scope="row".
3. Leave empty <td></td> for free slots.
4. Use border-collapse: separate and border-spacing so cells look like tiles.
5. Style non-empty cells with :not(:empty).

6. Wrap for horizontal scrolling.

Project 518: index.html

Build a timetable as a table with separate, rounded cells where booked slots are highlighted with :not(:empty).

Learning goals

- Use the separate border model with border-spacing
- Highlight cells based on content with :empty
- Keep a wide table scrollable

Elements and CSS used

HTML elements	CSS features
table, caption, thead, tbody, tr, th, td	border-collapse: separate, border-spacing, :not(:empty), border-radius on cells, min-width

Build guide

1. Write the header row with the days.
2. Write one row per time slot; the first cell is th scope="row".
3. Leave empty <td></td> for free slots.
4. Use border-collapse: separate and border-spacing so cells look like tiles.
5. Style non-empty cells with :not(:empty).
6. Wrap for horizontal scrolling.

Project 521: index.html

Project 521 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Port Said Seafood - Weekly schedule</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
Weekly schedule	The main heading; only one per page.
	Generic block container for grouping and layout.
<table class="schedule">	Tabular data in rows and columns.
<caption>Dishes by day and time</caption>	Title of the table.
<thead><tr><th scope="col">Time</th><th scope="col">Sat</th><th sco...	Group of header rows.
<tbody>	Group of data rows.

Line	What it does
<tr><th scope="row">9:00</th><td>Grilled sea bass</td><td></td><td>...	A table row.
<tr><th scope="row">11:00</th><td></td><td>Shrimp tagine</td><td></...	Header cell for a row.
<tr><th scope="row">13:00</th><td>Calamari</td><td></td><td>Calamar...	A header cell.
<tr><th scope="row">15:00</th><td></td><td>Fish soup</td><td></td><...	A data cell.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #0e7490;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.

Declaration	What it does
max-width: 60rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
overflow-x: auto;	Adds a horizontal scrollbar only when needed (responsive tables).
border-collapse: separate;	Keeps each cell's border separate so cells look like tiles.
border-spacing: 4px;	Gap between cells in the separate border model.
width: 100%;	Fills the container width.
background: var(--brand);	Background colour or image.
border-radius: 6px;	Rounds the corners.
border-radius: 6px;	The line around the element: width, style and colour.
text-align: center;	Centres inline content such as text.
.schedule td:not(:empty) {	Excludes elements from a selector.
font-weight: 600;	Thickness of the text.
border: 2px solid var(--brand);	Changes the visual order of a flex item without changing the source.

Check your work

- Every cell exists even if empty
- Row and column headers have scope
- Tiles have rounded corners
- Table scrolls on narrow screens

Exercises

1. Add rowspan for a two-hour slot.

2. Colour by category with classes.
3. Make the time column sticky with position: sticky; left: 0.

Theme data for this project

Field	Value
Business	Port Said Seafood
Tagline	Grilled fish straight from the boats
City	Port Said
Owner	Sherif Wahba
Brand colour	#0e7490
Accent colour	#ecfeff
Offers	Grilled sea bass (320 EGP); Shrimp tagine (280 EGP); Calamari (190 EGP); Fish soup (120 EGP)

Project 522: Weekly schedule grid for Delta Kids Library

Theme: Delta Kids Library (Tanta) | Level 2 | Files: index.html, styles.css

Brief

Build a timetable as a table with separate, rounded cells where booked slots are highlighted with :not(:empty).

Learning goals

- Use the separate border model with border-spacing
- Highlight cells based on content with :empty
- Keep a wide table scrollable

Elements and CSS used

HTML elements	CSS features
table, caption, thead, tbody, tr, th, td	border-collapse: separate, border-spacing, :not(:empty), border-radius on cells, min-width

Build guide

1. Write the header row with the days.
2. Write one row per time slot; the first cell is th scope="row".
3. Leave empty <td></td> for free slots.
4. Use border-collapse: separate and border-spacing so cells look like tiles.
5. Style non-empty cells with :not(:empty).
6. Wrap for horizontal scrolling.

Declaration	What it does
max-width: 60rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
overflow-x: auto;	Adds a horizontal scrollbar only when needed (responsive tables).
border-collapse: separate;	Keeps each cell's border separate so cells look like tiles.
border-spacing: 4px;	Gap between cells in the separate border model.
width: 100%;	Fills the container width.
background: var(--brand);	Background colour or image.
border-radius: 6px;	Rounds the corners.
border-radius: 6px;	The line around the element: width, style and colour.
text-align: center;	Centres inline content such as text.
.schedule td:not(:empty) {	Excludes elements from a selector.
font-weight: 600;	Thickness of the text.
border: 2px solid var(--brand);	Changes the visual order of a flex item without changing the source.

Check your work

- Every cell exists even if empty
- Row and column headers have scope
- Tiles have rounded corners
- Table scrolls on narrow screens

Exercises

1. Add rowspan for a two-hour slot.

2. Colour by category with classes.
3. Make the time column sticky with position: sticky; left: 0.

Theme data for this project

Field	Value
Business	Ismailia Cycling Store
Tagline	Bikes, parts and Friday group rides
City	Ismailia
Owner	Bassem Adly
Brand colour	#dc2626
Accent colour	#fef2f2
Offers	City bike (6500 EGP); Mountain bike (11000 EGP); Kids bike (3200 EGP); Tune-up (250 EGP)

Project 525: Weekly schedule grid for Minya Coding Club

Theme: Minya Coding Club (Minya) | Level 2 | Files: index.html, styles.css

Brief

Build a timetable as a table with separate, rounded cells where booked slots are highlighted with :not(:empty).

Learning goals

- Use the separate border model with border-spacing
- Highlight cells based on content with :empty
- Keep a wide table scrollable

Elements and CSS used

HTML elements	CSS features
table, caption, thead, tbody, tr, th, td	border-collapse: separate, border-spacing, :not(:empty), border-radius on cells, min-width

Build guide

1. Write the header row with the days.
2. Write one row per time slot; the first cell is th scope="row".
3. Leave empty <td></td> for free slots.
4. Use border-collapse: separate and border-spacing so cells look like tiles.
5. Style non-empty cells with :not(:empty).
6. Wrap for horizontal scrolling.

Project 525: index.html

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1">
  <title>Minya Coding Club - Weekly schedule</title>
  <link rel="stylesheet" href="styles.css">
</head>
<body>
  <main>
    <h1>Weekly schedule</h1>
    <div class="wrap">
      <table class="schedule">
        <caption>Workshops by day and time</caption>
        <thead><tr><th scope="col">Time</th><th scope="col">Sat</
th><th scope="col">Sun</th><th scope="col">Mon</th><th
scope="col">Tue</th><th scope="col">Wed</th></tr></thead>
        <tbody>
          <tr><th scope="row">9:00</th><td>HTML weekend</td><td></
td><td>HTML weekend</td><td></td><td>HTML weekend</td></tr>
          <tr><th scope="row">11:00</th><td></td><td>CSS art</
td><td></td><td>CSS art</td><td></td></tr>
          <tr><th scope="row">13:00</th><td>Scratch games</td><td></
td><td>Scratch games</td><td></td><td>Scratch games</td></tr>
          <tr><th scope="row">15:00</th><td></td><td>Hackathon</
td><td></td><td>Hackathon</td><td></td></tr>
        </tbody>
      </table>
    </div>
  </main>
</body>
</html>
```

Project 525: styles.css

```
*, *::before, *::after { box-sizing: border-box; }

```

Project 525 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Minya Coding Club - Weekly schedule</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
Weekly schedule	The main heading; only one per page.
	Generic block container for grouping and layout.
<table class="schedule">	Tabular data in rows and columns.
<caption>Workshops by day and time</caption>	Title of the table.
<thead><tr><th scope="col">Time</th><th scope="col">Sat</th><th sco...	Group of header rows.
<tbody>	Group of data rows.

Line	What it does
<tr><th scope="row">9:00</th><td>HTML weekend</td><td></td><td>HTML...	A table row.
<tr><th scope="row">11:00</th><td></td><td>CSS art</td><td></td><td...	Header cell for a row.
<tr><th scope="row">13:00</th><td>Scratch games</td><td></td><td>Sc...	A header cell.
<tr><th scope="row">15:00</th><td></td><td>Hackathon</td><td></td><...	A data cell.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #2563eb;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.

Declaration	What it does
max-width: 60rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
overflow-x: auto;	Adds a horizontal scrollbar only when needed (responsive tables).
border-collapse: separate;	Keeps each cell's border separate so cells look like tiles.
border-spacing: 4px;	Gap between cells in the separate border model.
width: 100%;	Fills the container width.
background: var(--brand);	Background colour or image.
border-radius: 6px;	Rounds the corners.
border-radius: 6px;	The line around the element: width, style and colour.
text-align: center;	Centres inline content such as text.
.schedule td:not(:empty) {	Excludes elements from a selector.
font-weight: 600;	Thickness of the text.
border: 2px solid var(--brand);	Changes the visual order of a flex item without changing the source.

Check your work

- Every cell exists even if empty
- Row and column headers have scope
- Tiles have rounded corners
- Table scrolls on narrow screens

Exercises

1. Add rowspan for a two-hour slot.

2. Colour by category with classes.
3. Make the time column sticky with position: sticky; left: 0.

Theme data for this project

Field	Value
Business	Minya Coding Club
Tagline	Free weekend coding for teenagers
City	Minya
Owner	Youssef Hany
Brand colour	#2563eb
Accent colour	#eff6ff
Offers	HTML weekend (Free); CSS art (Free); Scratch games (Free); Hackathon (Free)

Project type: CV / resume page

Level 2 | 25 projects, one per theme

Lay out a one-page CV with header, experience entries using article and time, and a skills list as pills, with a print stylesheet.

Project 526: CV / resume page for Mohamed Khattab

Theme: Cairo Book Shop (Giza) | Level 2 | Files: index.html, styles.css

Brief

Lay out a one-page CV with header, experience entries using article and time, and a skills list as pills, with a print stylesheet.

Learning goals

- Structure a CV semantically
- Style skill tags with Flexbox wrapping
- Add @media print rules

Elements and CSS used

HTML elements	CSS features
header, h1, p, a, section, article, h3, time, ul, li	border-bottom, text-transform, letter-spacing, flex-wrap, @media print

Build guide

1. Write the header with name, role and contact links.
2. Add an Experience section with one article per job.
3. Use <time> for the years.
4. Add a Skills list.
5. Style section headings small and uppercase.
6. Print preview (Ctrl+P) and adjust the print rules.

Project 526: index.html

```

Project 526 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Mohamed Khattab - CV</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main class="cv">	The unique content of this page; exactly one per page.
<header>	Introductory content: logo, title, navigation.
Mohamed Khattab	The main heading; only one per page.
Founder, Cairo Book Shop · Giza	A paragraph of text.
Email &m...	A hyperlink; href gives the destination.
<section>	A thematic group of content, normally with its own heading.
Experience	Second-level heading for a section.
<article>	A self-contained piece: card, post, product.

Line	What it does
Founder, Cairo Book Shop	Third-level heading, inside an h2 section.
<time date time="2018">2018</time> - present	A date or time; datetime holds the machine-readable value.
Grew the business to 4 core books. Built a loyal cu...	Unordered (bulleted) list.
Managed a team of six.	One list item.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #b90000;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 46rem;	Limits how wide the element can grow, keeping lines readable.

Declaration	What it does
padding: 0 1rem;	Space inside the element between its border and content.
border-bottom: 3px solid var(--brand);	A bottom border used as a separator line.
text-transform: uppercase;	Displays text in capitals without changing the HTML.
font-size: 1rem;	Size of the text.
letter-spacing: .08em;	Adds space between letters; useful for small capitals.
list-style: none;	Removes bullets or numbers from a list.
display: flex;	Turns the element into a flex container (one-dimensional layout).
flex-wrap: wrap;	Allows flex items to move to a new line when they do not fit.
gap: .5rem;	Space between grid or flex items without extra margins.
background: var(--accent);	Background colour or image.
border-radius: 999px;	Fully rounded pill shape.
@media print { a { color: inherit; text-decoration: none; } .cv { m...	Removes the underline from links.

Check your work

- Contact links work (mailto, tel)
- Jobs in reverse chronological order
- Skills wrap
- Prints on one page without colours

Exercises

1. Add a two-column layout for print with CSS columns.
2. Add an Education section.
3. Add a downloadable PDF link.

Accent colour	#fff6ec
Offers	Sourdough loaf (60 EGP); Croissant (35 EGP); Date cookies (80 EGP); Baklava box (220 EGP)

Project 528: CV / resume page for Omar Farouk

Theme: Pyramid Fitness (6th of October) | Level 2 | Files: index.html, styles.css

Brief

Lay out a one-page CV with header, experience entries using article and time, and a skills list as pills, with a print stylesheet.

Learning goals

- Structure a CV semantically
- Style skill tags with Flexbox wrapping
- Add @media print rules

Elements and CSS used

HTML elements	CSS features
header, h1, p, a, section, article, h3, time, ul, li	border-bottom, text-transform, letter-spacing, flex-wrap, @media print

Build guide

1. Write the header with name, role and contact links.
2. Add an Experience section with one article per job.
3. Use <time> for the years.
4. Add a Skills list.
5. Style section headings small and uppercase.
6. Print preview (Ctrl+P) and adjust the print rules.

Project 528: index.html

Project 528 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Omar Farouk - CV</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main class="cv">	The unique content of this page; exactly one per page.
<header>	Introductory content: logo, title, navigation.
Omar Farouk	The main heading; only one per page.
Founder, Pyramid Fitness · 6th of October	A paragraph of text.
Email &middot...	A hyperlink; href gives the destination.
<section>	A thematic group of content, normally with its own heading.
Experience	Second-level heading for a section.
<article>	A self-contained piece: card, post, product.

Line	What it does
Founder, Pyramid Fitness	Third-level heading, inside an h2 section.
<time date time="2018">2018</time> - present	A date or time; datetime holds the machine-readable value.
Grew the business to 4 core classes. Built a loyal ...	Unordered (bulleted) list.
Managed a team of six.	One list item.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #0f766e;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 46rem;	Limits how wide the element can grow, keeping lines readable.

Declaration	What it does
padding: 0 1rem;	Space inside the element between its border and content.
border-bottom: 3px solid var(--brand);	A bottom border used as a separator line.
text-transform: uppercase;	Displays text in capitals without changing the HTML.
font-size: 1rem;	Size of the text.
letter-spacing: .08em;	Adds space between letters; useful for small capitals.
list-style: none;	Removes bullets or numbers from a list.
display: flex;	Turns the element into a flex container (one-dimensional layout).
flex-wrap: wrap;	Allows flex items to move to a new line when they do not fit.
gap: .5rem;	Space between grid or flex items without extra margins.
background: var(--accent);	Background colour or image.
border-radius: 999px;	Fully rounded pill shape.
@media print { a { color: inherit; text-decoration: none; } .cv { m...	Removes the underline from links.

Check your work

- Contact links work (mailto, tel)
- Jobs in reverse chronological order
- Skills wrap
- Prints on one page without colours

Exercises

1. Add a two-column layout for print with CSS columns.
2. Add an Education section.
3. Add a downloadable PDF link.

Theme data for this project

Field	Value
Business	Pyramid Fitness
Tagline	Train smarter, feel stronger
City	6th of October
Owner	Omar Farouk
Brand colour	#0f766e
Accent colour	#ecfdf5
Offers	Morning yoga (100 EGP); Strength circuit (120 EGP); Spinning (110 EGP); Personal training (350 EGP)

Project 529: CV / resume page for Dr. Hana Youssef

Theme: Delta Dental Clinic (Mansoura) | Level 2 | Files: index.html, styles.css

Brief

Lay out a one-page CV with header, experience entries using article and time, and a skills list as pills, with a print stylesheet.

Learning goals

- Structure a CV semantically
- Style skill tags with Flexbox wrapping
- Add @media print rules

Elements and CSS used

HTML elements	CSS features
header, h1, p, a, section, article, h3, time, ul, li	border-bottom, text-transform, letter-spacing, flex-wrap, @media print

Build guide

1. Write the header with name, role and contact links.
2. Add an Experience section with one article per job.
3. Use <time> for the years.
4. Add a Skills list.
5. Style section headings small and uppercase.
6. Print preview (Ctrl+P) and adjust the print rules.

Project 529: index.html

Declaration	What it does
padding: 0 1rem;	Space inside the element between its border and content.
border-bottom: 3px solid var(--brand);	A bottom border used as a separator line.
text-transform: uppercase;	Displays text in capitals without changing the HTML.
font-size: 1rem;	Size of the text.
letter-spacing: .08em;	Adds space between letters; useful for small capitals.
list-style: none;	Removes bullets or numbers from a list.
display: flex;	Turns the element into a flex container (one-dimensional layout).
flex-wrap: wrap;	Allows flex items to move to a new line when they do not fit.
gap: .5rem;	Space between grid or flex items without extra margins.
background: var(--accent);	Background colour or image.
border-radius: 999px;	Fully rounded pill shape.
@media print { a { color: inherit; text-decoration: none; } .cv { m...	Removes the underline from links.

Check your work

- Contact links work (mailto, tel)
- Jobs in reverse chronological order
- Skills wrap
- Prints on one page without colours

Exercises

1. Add a two-column layout for print with CSS columns.
2. Add an Education section.
3. Add a downloadable PDF link.

Theme data for this project

Field	Value
Business	Lotus Language School
Tagline	Learn English, French and German in small groups
City	Alexandria
Owner	Nour El Din
Brand colour	#7c3aed
Accent colour	#f5f3ff
Offers	English A1 (1800 EGP); French B1 (2200 EGP); German A2 (2000 EGP); IELTS preparation (3000 EGP)

Project 532: CV / resume page for Karim Said

Theme: Green Leaf Cafe (Zamalek) | Level 2 | Files: index.html, styles.css

Brief

Lay out a one-page CV with header, experience entries using article and time, and a skills list as pills, with a print stylesheet.

Learning goals

- Structure a CV semantically
- Style skill tags with Flexbox wrapping
- Add @media print rules

Elements and CSS used

HTML elements	CSS features
header, h1, p, a, section, article, h3, time, ul, li	border-bottom, text-transform, letter-spacing, flex-wrap, @media print

Build guide

1. Write the header with name, role and contact links.
2. Add an Experience section with one article per job.
3. Use <time> for the years.
4. Add a Skills list.
5. Style section headings small and uppercase.
6. Print preview (Ctrl+P) and adjust the print rules.

Project 532: index.html

Project 532 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Karim Said - CV</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main class="cv">	The unique content of this page; exactly one per page.
<header>	Introductory content: logo, title, navigation.
Karim Said	The main heading; only one per page.
Founder, Green Leaf Cafe · Zamalek	A paragraph of text.
Email &middo...	A hyperlink; href gives the destination.
<section>	A thematic group of content, normally with its own heading.
Experience	Second-level heading for a section.
<article>	A self-contained piece: card, post, product.

Line	What it does
Founder, Green Leaf Cafe	Third-level heading, inside an h2 section.
<time date time="2018">2018</time> - present	A date or time; datetime holds the machine-readable value.
Grew the business to 4 core drinks. Built a loyal c...	Unordered (bulleted) list.
Managed a team of six.	One list item.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #166534;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 46rem;	Limits how wide the element can grow, keeping lines readable.

Declaration	What it does
padding: 0 1rem;	Space inside the element between its border and content.
border-bottom: 3px solid var(--brand);	A bottom border used as a separator line.
text-transform: uppercase;	Displays text in capitals without changing the HTML.
font-size: 1rem;	Size of the text.
letter-spacing: .08em;	Adds space between letters; useful for small capitals.
list-style: none;	Removes bullets or numbers from a list.
display: flex;	Turns the element into a flex container (one-dimensional layout).
flex-wrap: wrap;	Allows flex items to move to a new line when they do not fit.
gap: .5rem;	Space between grid or flex items without extra margins.
background: var(--accent);	Background colour or image.
border-radius: 999px;	Fully rounded pill shape.
@media print { a { color: inherit; text-decoration: none; } .cv { m...	Removes the underline from links.

Check your work

Project 535 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Dina Fathy - CV</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main class="cv">	The unique content of this page; exactly one per page.
<header>	Introductory content: logo, title, navigation.
Dina Fathy	The main heading; only one per page.
Founder, Papyrus Stationery · Heliopolis	A paragraph of text.
Email ...	A hyperlink; href gives the destination.
<section>	A thematic group of content, normally with its own heading.
Experience	Second-level heading for a section.
<article>	A self-contained piece: card, post, product.

Line	What it does
Founder, Papyrus Stationery	Third-level heading, inside an h2 section.
<time date time="2018">2018</time> - present	A date or time; datetime holds the machine-readable value.
Grew the business to 4 core products. Built a loyal...	Unordered (bulleted) list.
Managed a team of six.	One list item.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #be185d;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 46rem;	Limits how wide the element can grow, keeping lines readable.

Declaration	What it does
padding: 0 1rem;	Space inside the element between its border and content.
border-bottom: 3px solid var(--brand);	A bottom border used as a separator line.
text-transform: uppercase;	Displays text in capitals without changing the HTML.
font-size: 1rem;	Size of the text.
letter-spacing: .08em;	Adds space between letters; useful for small capitals.
list-style: none;	Removes bullets or numbers from a list.
display: flex;	Turns the element into a flex container (one-dimensional layout).
flex-wrap: wrap;	Allows flex items to move to a new line when they do not fit.
gap: .5rem;	Space between grid or flex items without extra margins.
background: var(--accent);	Background colour or image.
border-radius: 999px;	Fully rounded pill shape.
@media print { a { color: inherit; text-decoration: none; } .cv { m...	Removes the underline from links.

Check your work

- Contact links work (mailto, tel)
- Jobs in reverse chronological order
- Skills wrap
- Prints on one page without colours

Exercises

1. Add a two-column layout for print with CSS columns.
2. Add an Education section.
3. Add a downloadable PDF link.

Theme data for this project

Field	Value
Business	Papyrus Stationery
Tagline	Notebooks, pens and paper made in Egypt
City	Heliopolis
Owner	Dina Fathy
Brand colour	#be185d
Accent colour	#fdf2f8
Offers	Dotted notebook (140 EGP); Fountain pen (350 EGP); Washi tape set (90 EGP); Desk planner (110 EGP)

Project 536: CV / resume page for Hossam Ali

Theme: Oasis Plant Nursery (Sheikh Zayed) | Level 2 | Files: index.html, styles.css

Brief

Lay out a one-page CV with header, experience entries using article and time, and a skills list as pills, with a print stylesheet.

Learning goals

- Structure a CV semantically
- Style skill tags with Flexbox wrapping
- Add @media print rules

Elements and CSS used

HTML elements	CSS features
header, h1, p, a, section, article, h3, time, ul, li	border-bottom, text-transform, letter-spacing, flex-wrap, @media print

Build guide

1. Write the header with name, role and contact links.
2. Add an Experience section with one article per job.
3. Use <time> for the years.
4. Add a Skills list.
5. Style section headings small and uppercase.
6. Print preview (Ctrl+P) and adjust the print rules.

Project 536: index.html

box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #0891b2;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 46rem;	Limits how wide the element can grow, keeping lines readable.

Declaration	What it does
padding: 0 1rem;	Space inside the element between its border and content.
border-bottom: 3px solid var(--brand);	A bottom border used as a separator line.
text-transform: uppercase;	Displays text in capitals without changing the HTML.
font-size: 1rem;	Size of the text.
letter-spacing: .08em;	Adds space between letters; useful for small capitals.
list-style: none;	Removes bullets or numbers from a list.
display: flex;	Turns the element into a flex container (one-dimensional layout).
flex-wrap: wrap;	Allows flex items to move to a new line when they do not fit.
gap: .5rem;	Space between grid or flex items without extra margins.
background: var(--accent);	Background colour or image.
border-radius: 999px;	Fully rounded pill shape.
@media print { a { color: inherit; text-decoration: none; } .cv { m...	Removes the underline from links.

Check your work

- Contact links work (mailto, tel)
- Jobs in reverse chronological order
- Skills wrap
- Prints on one page without colours

Exercises

1. Add a two-column layout for print with CSS columns.
2. Add an Education section.
3. Add a downloadable PDF link.

Theme data for this project

Field	Value
Business	Byte Repair
Tagline	Phone and laptop repairs while you wait
City	Nasr City
Owner	Mostafa Gamal
Brand colour	#0891b2
Accent colour	#ecfeff
Offers	Screen replacement (From 800 EGP); Battery swap (From 500 EGP); Laptop cleaning (350 EGP); Data recovery (From 1200 EGP)

Project 539: CV / resume page for Rana Ibrahim

Theme: Sahara Pet Care (New Cairo) | Level 2 | Files: index.html, styles.css

Brief

Lay out a one-page CV with header, experience entries using article and time, and a skills list as pills, with a print stylesheet.

Learning goals

- Structure a CV semantically
- Style skill tags with Flexbox wrapping
- Add @media print rules

Elements and CSS used

HTML elements	CSS features
header, h1, p, a, section, article, h3, time, ul, li	border-bottom, text-transform, letter-spacing, flex-wrap, @media print

Build guide

1. Write the header with name, role and contact links.
2. Add an Experience section with one article per job.
3. Use <time> for the years.
4. Add a Skills list.
5. Style section headings small and uppercase.
6. Print preview (Ctrl+P) and adjust the print rules.

Project 539: index.html

```

Project 539 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Rana Ibrahim - CV</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main class="cv">	The unique content of this page; exactly one per page.
<header>	Introductory content: logo, title, navigation.
Rana Ibrahim	The main heading; only one per page.
Founder, Sahara Pet Care · New Cairo	A paragraph of text.
Email &middo...	A hyperlink; href gives the destination.
<section>	A thematic group of content, normally with its own heading.
Experience	Second-level heading for a section.
<article>	A self-contained piece: card, post, product.

Line	What it does
Founder, Sahara Pet Care	Third-level heading, inside an h2 section.
<time date time="2018">2018</time> - present	A date or time; datetime holds the machine-readable value.
Grew the business to 4 core services. Built a loyal...	Unordered (bulleted) list.
Managed a team of six.	One list item.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #c2410c;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 46rem;	Limits how wide the element can grow, keeping lines readable.

Declaration	What it does
padding: 0 1rem;	Space inside the element between its border and content.
border-bottom: 3px solid var(--brand);	A bottom border used as a separator line.
text-transform: uppercase;	Displays text in capitals without changing the HTML.
font-size: 1rem;	Size of the text.
letter-spacing: .08em;	Adds space between letters; useful for small capitals.
list-style: none;	Removes bullets or numbers from a list.
display: flex;	Turns the element into a flex container (one-dimensional layout).
flex-wrap: wrap;	Allows flex items to move to a new line when they do not fit.
gap: .5rem;	Space between grid or flex items without extra margins.
background: var(--accent);	Background colour or image.
border-radius: 999px;	Fully rounded pill shape.
@media print { a { color: inherit; text-decoration: none; } .cv { m...	Removes the underline from links.

Check your work

Accent colour	#fff7ed
Offers	Full grooming (400 EGP); Day boarding (250 EGP); Vaccination (300 EGP); Dog walking (100 EGP)

Project 540: CV / resume page for Amr Selim

Theme: Alexandria Sailing School (Alexandria) | Level 2 | Files: index.html, styles.css

Brief

Lay out a one-page CV with header, experience entries using article and time, and a skills list as pills, with a print stylesheet.

Learning goals

- Structure a CV semantically
- Style skill tags with Flexbox wrapping
- Add @media print rules

Elements and CSS used

HTML elements	CSS features
header, h1, p, a, section, article, h3, time, ul, li	border-bottom, text-transform, letter-spacing, flex-wrap, @media print

Build guide

1. Write the header with name, role and contact links.
2. Add an Experience section with one article per job.
3. Use <time> for the years.
4. Add a Skills list.
5. Style section headings small and uppercase.
6. Print preview (Ctrl+P) and adjust the print rules.

Project 540: index.html

Project 542 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Ahmed Mahmoud - CV</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main class="cv">	The unique content of this page; exactly one per page.
<header>	Introductory content: logo, title, navigation.
Ahmed Mahmoud	The main heading; only one per page.
<p class="role">Founder, Fayoum Pottery Studio · Tunis Villa...	A paragraph of text.
<p class="links">Email &mi...	A hyperlink; href gives the destination.
<section>	A thematic group of content, normally with its own heading.
Experience	Second-level heading for a section.
<article>	A self-contained piece: card, post, product.

Line	What it does
Founder, Fayoum Pottery Studio	Third-level heading, inside an h2 section.
<time date time="2018">2018</time> - present	A date or time; datetime holds the machine-readable value.
Grew the business to 4 core workshops. Built a loya...	Unordered (bulleted) list.
Managed a team of six.	One list item.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #9a3412;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.

Declaration	What it does
max-width: 46rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
border-bottom: 3px solid var(--brand);	A bottom border used as a separator line.
text-transform: uppercase;	Displays text in capitals without changing the HTML.
font-size: 1rem;	Size of the text.
letter-spacing: .08em;	Adds space between letters; useful for small capitals.
list-style: none;	Removes bullets or numbers from a list.
display: flex;	Turns the element into a flex container (one-dimensional layout).
flex-wrap: wrap;	Allows flex items to move to a new line when they do not fit.
gap: .5rem;	Space between grid or flex items without extra margins.
background: var(--accent);	Background colour or image.
border-radius: 999px;	Fully rounded pill shape.
@media print { a { color: inherit; text-decoration: none; } .cv { m...	Removes the underline from links.

Check your work

- Contact links work (mailto, tel)
- Jobs in reverse chronological order
- Skills wrap
- Prints on one page without colours

Exercises

1. Add a two-column layout for print with CSS columns.
2. Add an Education section.
3. Add a downloadable PDF link.

Theme data for this project

Field	Value
Business	Fayoum Pottery Studio
Tagline	Wheel throwing and glazing classes
City	Tunis Village
Owner	Ahmed Mahmoud
Brand colour	#9a3412
Accent colour	#fff7ed
Offers	Intro to the wheel (450 EGP); Glazing day (300 EGP); Kids clay class (200 EGP); Weekend retreat (2500 EGP)

Project 543: CV / resume page for Mariam Adel

Theme: Cleopatra Beauty Salon (Dokki) | Level 2 | Files: index.html, styles.css

Brief

Lay out a one-page CV with header, experience entries using article and time, and a skills list as pills, with a print stylesheet.

Learning goals

- Structure a CV semantically
- Style skill tags with Flexbox wrapping
- Add @media print rules

Elements and CSS used

HTML elements	CSS features
header, h1, p, a, section, article, h3, time, ul, li	border-bottom, text-transform, letter-spacing, flex-wrap, @media print

Build guide

1. Write the header with name, role and contact links.
2. Add an Experience section with one article per job.
3. Use <time> for the years.
4. Add a Skills list.
5. Style section headings small and uppercase.
6. Print preview (Ctrl+P) and adjust the print rules.

Line	What it does
Founder, Luxor Music Academy	Third-level heading, inside an h2 section.
<time date time="2018">2018</time> - present	A date or time; datetime holds the machine-readable value.
Grew the business to 4 core courses. Built a loyal ...	Unordered (bulleted) list.
Managed a team of six.	One list item.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #4c1d95;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 46rem;	Limits how wide the element can grow, keeping lines readable.

Declaration	What it does
padding: 0 1rem;	Space inside the element between its border and content.
border-bottom: 3px solid var(--brand);	A bottom border used as a separator line.
text-transform: uppercase;	Displays text in capitals without changing the HTML.
font-size: 1rem;	Size of the text.
letter-spacing: .08em;	Adds space between letters; useful for small capitals.
list-style: none;	Removes bullets or numbers from a list.
display: flex;	Turns the element into a flex container (one-dimensional layout).
flex-wrap: wrap;	Allows flex items to move to a new line when they do not fit.
gap: .5rem;	Space between grid or flex items without extra margins.
background: var(--accent);	Background colour or image.
border-radius: 999px;	Fully rounded pill shape.
@media print { a { color: inherit; text-decoration: none; } .cv { m...	Removes the underline from links.

Check your work

- Contact links work (mailto, tel)
- Jobs in reverse chronological order
- Skills wrap
- Prints on one page without colours

Exercises

1. Add a two-column layout for print with CSS columns.
2. Add an Education section.
3. Add a downloadable PDF link.

Theme data for this project

Field	Value
Business	Luxor Music Academy
Tagline	Oud, piano, guitar and voice lessons
City	Luxor
Owner	Salma Ragab
Brand colour	#4c1d95
Accent colour	#f5f3ff
Offers	Oud for beginners (1600 EGP); Piano grade 1 (1800 EGP); Guitar chords (1400 EGP); Voice coaching (1500 EGP)

Project 546: CV / resume page for Sherif Wahba

Theme: Port Said Seafood (Port Said) | Level 2 | Files: index.html, styles.css

Brief

Lay out a one-page CV with header, experience entries using article and time, and a skills list as pills, with a print stylesheet.

Learning goals

- Structure a CV semantically
- Style skill tags with Flexbox wrapping
- Add @media print rules

Elements and CSS used

HTML elements	CSS features
header, h1, p, a, section, article, h3, time, ul, li	border-bottom, text-transform, letter-spacing, flex-wrap, @media print

Build guide

1. Write the header with name, role and contact links.
2. Add an Experience section with one article per job.
3. Use <time> for the years.
4. Add a Skills list.
5. Style section headings small and uppercase.
6. Print preview (Ctrl+P) and adjust the print rules.

Project 546: index.html

Project 549 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Bassem Adly - CV</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main class="cv">	The unique content of this page; exactly one per page.
<header>	Introductory content: logo, title, navigation.
Bassem Adly	The main heading; only one per page.
Founder, Ismailia Cycling Store · Ismailia	A paragraph of text.
Email &mi...	A hyperlink; href gives the destination.
<section>	A thematic group of content, normally with its own heading.
Experience	Second-level heading for a section.
<article>	A self-contained piece: card, post, product.

Line	What it does
Founder, Ismailia Cycling Store	Third-level heading, inside an h2 section.
<time date time="2018">2018</time> - present	A date or time; datetime holds the machine-readable value.
Grew the business to 4 core bikes. Built a loyal cu...	Unordered (bulleted) list.
Managed a team of six.	One list item.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #dc2626;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 46rem;	Limits how wide the element can grow, keeping lines readable.

Declaration	What it does
padding: 0 1rem;	Space inside the element between its border and content.
border-bottom: 3px solid var(--brand);	A bottom border used as a separator line.
text-transform: uppercase;	Displays text in capitals without changing the HTML.
font-size: 1rem;	Size of the text.
letter-spacing: .08em;	Adds space between letters; useful for small capitals.
list-style: none;	Removes bullets or numbers from a list.
display: flex;	Turns the element into a flex container (one-dimensional layout).
flex-wrap: wrap;	Allows flex items to move to a new line when they do not fit.
gap: .5rem;	Space between grid or flex items without extra margins.
background: var(--accent);	Background colour or image.
border-radius: 999px;	Fully rounded pill shape.
@media print { a { color: inherit; text-decoration: none; } .cv { m...	Removes the underline from links.

Check your work

- Contact links work (mailto, tel)
- Jobs in reverse chronological order
- Skills wrap
- Prints on one page without colours

Exercises

1. Add a two-column layout for print with CSS columns.
2. Add an Education section.
3. Add a downloadable PDF link.

Theme data for this project

Field	Value
Business	Ismailia Cycling Store
Tagline	Bikes, parts and Friday group rides
City	Ismailia
Owner	Bassem Adly
Brand colour	#dc2626
Accent colour	#fef2f2
Offers	City bike (6500 EGP); Mountain bike (11000 EGP); Kids bike (3200 EGP); Tune-up (250 EGP)

Project 550: CV / resume page for Youssef Hany

Theme: Minya Coding Club (Minya) | Level 2 | Files: index.html, styles.css

Brief

Lay out a one-page CV with header, experience entries using article and time, and a skills list as pills, with a print stylesheet.

Learning goals

- Structure a CV semantically
- Style skill tags with Flexbox wrapping
- Add @media print rules

Elements and CSS used

HTML elements	CSS features
header, h1, p, a, section, article, h3, time, ul, li	border-bottom, text-transform, letter-spacing, flex-wrap, @media print

Build guide

1. Write the header with name, role and contact links.
2. Add an Experience section with one article per job.
3. Use <time> for the years.
4. Add a Skills list.
5. Style section headings small and uppercase.
6. Print preview (Ctrl+P) and adjust the print rules.

Project 550: index.html

```

Grew the business to 4 core workshops. Built a loya...	Unordered (bulleted) list.
Managed a team of six.	One list item.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #2563eb;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.

Declaration	What it does
max-width: 46rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
border-bottom: 3px solid var(--brand);	A bottom border used as a separator line.
text-transform: uppercase;	Displays text in capitals without changing the HTML.
font-size: 1rem;	Size of the text.
letter-spacing: .08em;	Adds space between letters; useful for small capitals.
list-style: none;	Removes bullets or numbers from a list.
display: flex;	Turns the element into a flex container (one-dimensional layout).
flex-wrap: wrap;	Allows flex items to move to a new line when they do not fit.
gap: .5rem;	Space between grid or flex items without extra margins.
background: var(--accent);	Background colour or image.
border-radius: 999px;	Fully rounded pill shape.
@media print { a { color: inherit; text-decoration: none; } .cv { m...	Removes the underline from links.

Check your work

- Contact links work (mailto, tel)
- Jobs in reverse chronological order
- Skills wrap
- Prints on one page without colours

Exercises

1. Add a two-column layout for print with CSS columns.
2. Add an Education section.
3. Add a downloadable PDF link.

Theme data for this project

Field	Value
Business	Minya Coding Club
Tagline	Free weekend coding for teenagers
City	Minya
Owner	Youssef Hany
Brand colour	#2563eb
Accent colour	#eff6ff
Offers	HTML weekend (Free); CSS art (Free); Scratch games (Free); Hackathon (Free)

Project type: Event page

Level 1 | 25 projects, one per theme

Announce an event with a machine-readable date, key facts in a two-column description list, a numbered programme and a register button.

Project 551: Event page for Cairo Book Shop

Theme: Cairo Book Shop (Giza) | Level 1 | Files: index.html, styles.css

Brief

Announce an event with a machine-readable date, key facts in a two-column description list, a numbered programme and a register button.

Learning goals

- Use <time> with a full datetime
- Lay out dl as a two-column grid
- Use ol for a sequence

Elements and CSS used

HTML elements	CSS features
article, time, h1, p, dl, dt, dd, h2, ol, li, b, a	grid-template-columns: max-content 1fr, gap (two values), border-radius, padding-left

Build guide

1. Write the date first with <time datetime="2026-10-15T18:00">.
2. Add heading and lead.
3. Add the facts list and programme.
4. Grid the dl: dt in the first column, dd in the second.
5. Style the button.
6. Validate the datetime format.

Project 551: index.html

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1">

```

Project 551 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Cairo Book Shop open day</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
<article class="event">	A self-contained piece: card, post, product.
<p class="date"><time datetime="2026-10-15T18:00">Thursday 15 Octob...	A paragraph of text.
Cairo Book Shop open day	The main heading; only one per page.
<dl class="facts">	Description list of term / description pairs.
<dt>Where</dt><dd>Cairo Book Shop, Giza</dd>	A term (name) in a description list.
<dt>Price</dt><dd>Free, registration required</dd>	The description of the preceding term.
Programme	Second-level heading for a section.

Line	What it does
	Ordered (numbered) list; the order matters.
18:00 Doors open	One list item.
18:30 Welcome talk	Keyword or name drawn to attention without extra importance.
Register now	A link styled as a button; it navigates, so it is a link and not a <button>.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #b90000;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 44rem;	Limits how wide the element can grow, keeping lines readable.

Declaration	What it does
padding: 0 1rem;	Space inside the element between its border and content.
font-weight: 700;	Thickness of the text.
font-size: 1.2rem;	Size of the text.
display: grid;	Turns the element into a grid container.
grid-template-columns: max-content 1fr;	Defines the columns of the grid.
gap: .4rem 1.5rem;	Space between grid or flex items without extra margins.
background: var(--accent);	Background colour or image.
border-radius: 10px;	Rounds the corners.
display: inline-block;	Flows in text but accepts width, height and vertical padding.
border-radius: 999px;	Fully rounded pill shape.
text-decoration: none;	Removes the underline from links.

Check your work

- datetime is ISO format
- dt/dd pairs align
- Programme is an ordered list
- Button text is an action

Exercises

1. Add an 'Add to calendar' .ics link.
2. Add a map with an iframe.
3. Add a countdown with JavaScript.

Theme data for this project

Field	Value
Business	Cairo Book Shop
Tagline	PDF and printed books about web development
City	Giza
Owner	Mohamed Khattab
Brand colour	#b90000
Accent colour	#f4f1ea
Offers	Learn HTML (120 EGP); CSS in Practice (150 EGP); JavaScript Basics (180 EGP); Web Accessibility (95 EGP)

Project 552: Event page for Nile Bakery

Theme: Nile Bakery (Cairo) | Level 1 | Files: index.html, styles.css

Brief

Announce an event with a machine-readable date, key facts in a two-column description list, a numbered programme and a register button.

Learning goals

- Use <time> with a full datetime
- Lay out dl as a two-column grid
- Use ol for a sequence

Elements and CSS used

HTML elements	CSS features
article, time, h1, p, dl, dt, dd, h2, ol, li, b, a	grid-template-columns: max-content 1fr, gap (two values), border-radius, padding-left

Build guide

1. Write the date first with <time datetime="2026-10-15T18:00">.
2. Add heading and lead.
3. Add the facts list and programme.
4. Grid the dl: dt in the first column, dd in the second.
5. Style the button.
6. Validate the datetime format.

Project 552: index.html

Programme	Second-level heading for a section.

Line	What it does
	Ordered (numbered) list; the order matters.
18:00 Doors open	One list item.
18:30 Welcome talk	Keyword or name drawn to attention without extra importance.
Register now	A link styled as a button; it navigates, so it is a link and not a <button>.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #a0522d;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 44rem;	Limits how wide the element can grow, keeping lines readable.

Declaration	What it does
padding: 0 1rem;	Space inside the element between its border and content.
font-weight: 700;	Thickness of the text.
font-size: 1.2rem;	Size of the text.
display: grid;	Turns the element into a grid container.
grid-template-columns: max-content 1fr;	Defines the columns of the grid.
gap: .4rem 1.5rem;	Space between grid or flex items without extra margins.
background: var(--accent);	Background colour or image.
border-radius: 10px;	Rounds the corners.
display: inline-block;	Flows in text but accepts width, height and vertical padding.
border-radius: 999px;	Fully rounded pill shape.
text-decoration: none;	Removes the underline from links.

Check your work

- datetime is ISO format
- dt/dd pairs align
- Programme is an ordered list
- Button text is an action

Exercises

1. Add an 'Add to calendar' .ics link.
2. Add a map with an iframe.
3. Add a countdown with JavaScript.

Theme data for this project

Field	Value
Business	Nile Bakery
Tagline	Fresh bread and pastries every morning
City	Cairo
Owner	Sara Adel
Brand colour	#a0522d
Accent colour	#fff6ec
Offers	Sourdough loaf (60 EGP); Croissant (35 EGP); Date cookies (80 EGP); Baklava box (220 EGP)

Project 553: Event page for Pyramid Fitness

Theme: Pyramid Fitness (6th of October) | Level 1 | Files: index.html, styles.css

Brief

Announce an event with a machine-readable date, key facts in a two-column description list, a numbered programme and a register button.

Learning goals

- Use <time> with a full datetime
- Lay out dl as a two-column grid
- Use ol for a sequence

Elements and CSS used

HTML elements	CSS features
article, time, h1, p, dl, dt, dd, h2, ol, li, b, a	grid-template-columns: max-content 1fr, gap (two values), border-radius, padding-left

Build guide

1. Write the date first with <time datetime="2026-10-15T18:00">.
2. Add heading and lead.
3. Add the facts list and programme.
4. Grid the dl: dt in the first column, dd in the second.
5. Style the button.
6. Validate the datetime format.

Project 556 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Lotus Language School open day</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
<article class="event">	A self-contained piece: card, post, product.
<p class="date"><time datetime="2026-10-15T18:00">Thursday 15 Octob...	A paragraph of text.
Lotus Language School open day	The main heading; only one per page.
<dl class="facts">	Description list of term / description pairs.
<dt>Where</dt><dd>Lotus Language School, Alexandria</dd>	A term (name) in a description list.
<dt>Price</dt><dd>Free, registration required</dd>	The description of the preceding term.
Programme	Second-level heading for a section.

Line	What it does
	Ordered (numbered) list; the order matters.
18:00 Doors open	One list item.
18:30 Welcome talk	Keyword or name drawn to attention without extra importance.
Register now	A link styled as a button; it navigates, so it is a link and not a <button>.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #7c3aed;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 44rem;	Limits how wide the element can grow, keeping lines readable.

Declaration	What it does
padding: 0 1rem;	Space inside the element between its border and content.
font-weight: 700;	Thickness of the text.
font-size: 1.2rem;	Size of the text.
display: grid;	Turns the element into a grid container.
grid-template-columns: max-content 1fr;	Defines the columns of the grid.
gap: .4rem 1.5rem;	Space between grid or flex items without extra margins.
background: var(--accent);	Background colour or image.
border-radius: 10px;	Rounds the corners.
display: inline-block;	Flows in text but accepts width, height and vertical padding.
border-radius: 999px;	Fully rounded pill shape.
text-decoration: none;	Removes the underline from links.

Check your work

- datetime is ISO format
- dt/dd pairs align
- Programme is an ordered list
- Button text is an action

Exercises

1. Add an 'Add to calendar' .ics link.
2. Add a map with an iframe.
3. Add a countdown with JavaScript.

Theme data for this project

Field	Value
Business	Lotus Language School
Tagline	Learn English, French and German in small groups
City	Alexandria
Owner	Nour El Din
Brand colour	#7c3aed
Accent colour	#f5f3ff
Offers	English A1 (1800 EGP); French B1 (2200 EGP); German A2 (2000 EGP); IELTS preparation (3000 EGP)

Project 557: Event page for Green Leaf Cafe

Theme: Green Leaf Cafe (Zamalek) | Level 1 | Files: index.html, styles.css

Brief

Announce an event with a machine-readable date, key facts in a two-column description list, a numbered programme and a register button.

Learning goals

- Use <time> with a full datetime
- Lay out dl as a two-column grid
- Use ol for a sequence

Elements and CSS used

HTML elements	CSS features
article, time, h1, p, dl, dt, dd, h2, ol, li, b, a	grid-template-columns: max-content 1fr, gap (two values), border-radius, padding-left

Build guide

1. Write the date first with <time datetime="2026-10-15T18:00">.
2. Add heading and lead.
3. Add the facts list and programme.
4. Grid the dl: dt in the first column, dd in the second.
5. Style the button.
6. Validate the datetime format.

Project 557: index.html

Theme data for this project

Field	Value
Business	Horizon Photography
Tagline	Portraits, weddings and product photography
City	Maadi
Owner	Adham Nabil
Brand colour	#111827
Accent colour	#f3f4f6
Offers	Portrait session (1200 EGP); Wedding day (15000 EGP); Product shoot (900 EGP); Family session (1500 EGP)

Project 560: Event page for Papyrus Stationery

Theme: Papyrus Stationery (Heliopolis) | Level 1 | Files: index.html, styles.css

Brief

Announce an event with a machine-readable date, key facts in a two-column description list, a numbered programme and a register button.

Learning goals

- Use <time> with a full datetime
- Lay out dl as a two-column grid
- Use ol for a sequence

Elements and CSS used

HTML elements	CSS features
article, time, h1, p, dl, dt, dd, h2, ol, li, b, a	grid-template-columns: max-content 1fr, gap (two values), border-radius, padding-left

Build guide

1. Write the date first with <time datetime="2026-10-15T18:00">.
2. Add heading and lead.
3. Add the facts list and programme.
4. Grid the dl: dt in the first column, dd in the second.
5. Style the button.
6. Validate the datetime format.

Project 560: index.html

```

Project 560 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Papyrus Stationery open day</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
<article class="event">	A self-contained piece: card, post, product.
<p class="date"><time datetime="2026-10-15T18:00">Thursday 15 Octob...	A paragraph of text.
Papyrus Stationery open day	The main heading; only one per page.
<dl class="facts">	Description list of term / description pairs.
<dt>Where</dt><dd>Papyrus Stationery, Heliopolis</dd>	A term (name) in a description list.
<dt>Price</dt><dd>Free, registration required</dd>	The description of the preceding term.
Programme	Second-level heading for a section.

Line	What it does
	Ordered (numbered) list; the order matters.
18:00 Doors open	One list item.
18:30 Welcome talk	Keyword or name drawn to attention without extra importance.
Register now	A link styled as a button; it navigates, so it is a link and not a <button>.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #be185d;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 44rem;	Limits how wide the element can grow, keeping lines readable.

Declaration	What it does
padding: 0 1rem;	Space inside the element between its border and content.
font-weight: 700;	Thickness of the text.
font-size: 1.2rem;	Size of the text.
display: grid;	Turns the element into a grid container.
grid-template-columns: max-content 1fr;	Defines the columns of the grid.
gap: .4rem 1.5rem;	Space between grid or flex items without extra margins.
background: var(--accent);	Background colour or image.
border-radius: 10px;	Rounds the corners.
display: inline-block;	Flows in text but accepts width, height and vertical padding.
border-radius: 999px;	Fully rounded pill shape.
text-decoration: none;	Removes the underline from links.

Check your work

- datetime is ISO format
- dt/dd pairs align
- Programme is an ordered list
- Button text is an action

Exercises

1. Add an 'Add to calendar' .ics link.
2. Add a map with an iframe.
3. Add a countdown with JavaScript.

Theme data for this project

Field	Value
Business	Papyrus Stationery
Tagline	Notebooks, pens and paper made in Egypt
City	Heliopolis
Owner	Dina Fathy
Brand colour	#be185d
Accent colour	#fdf2f8
Offers	Dotted notebook (140 EGP); Fountain pen (350 EGP); Washi tape set (90 EGP); Desk planner (110 EGP)

Project 561: Event page for Oasis Plant Nursery

Theme: Oasis Plant Nursery (Sheikh Zayed) | Level 1 | Files: index.html, styles.css

Brief

Announce an event with a machine-readable date, key facts in a two-column description list, a numbered programme and a register button.

Learning goals

- Use <time> with a full datetime
- Lay out dl as a two-column grid
- Use ol for a sequence

Elements and CSS used

HTML elements	CSS features
article, time, h1, p, dl, dt, dd, h2, ol, li, b, a	grid-template-columns: max-content 1fr, gap (two values), border-radius, padding-left

Build guide

1. Write the date first with <time datetime="2026-10-15T18:00">.
2. Add heading and lead.
3. Add the facts list and programme.
4. Grid the dl: dt in the first column, dd in the second.
5. Style the button.
6. Validate the datetime format.

<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
<article class="event">	A self-contained piece: card, post, product.
<p class="date"><time datetime="2026-10-15T18:00">Thursday 15 Octob...	A paragraph of text.
Byte Repair open day	The main heading; only one per page.
<dl class="facts">	Description list of term / description pairs.
<dt>Where</dt><dd>Byte Repair, Nasr City</dd>	A term (name) in a description list.
<dt>Price</dt><dd>Free, registration required</dd>	The description of the preceding term.
Programme	Second-level heading for a section.

Line	What it does
	Ordered (numbered) list; the order matters.
18:00 Doors open	One list item.
18:30 Welcome talk	Keyword or name drawn to attention without extra importance.
Register now	A link styled as a button; it navigates, so it is a link and not a <button>.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #0891b2;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 44rem;	Limits how wide the element can grow, keeping lines readable.

Declaration	What it does
padding: 0 1rem;	Space inside the element between its border and content.
font-weight: 700;	Thickness of the text.
font-size: 1.2rem;	Size of the text.
display: grid;	Turns the element into a grid container.
grid-template-columns: max-content 1fr;	Defines the columns of the grid.
gap: .4rem 1.5rem;	Space between grid or flex items without extra margins.
background: var(--accent);	Background colour or image.
border-radius: 10px;	Rounds the corners.
display: inline-block;	Flows in text but accepts width, height and vertical padding.
border-radius: 999px;	Fully rounded pill shape.
text-decoration: none;	Removes the underline from links.

Check your work

- datetime is ISO format
- dt/dd pairs align
- Programme is an ordered list
- Button text is an action

Exercises

1. Add an 'Add to calendar' .ics link.
2. Add a map with an iframe.
3. Add a countdown with JavaScript.

Theme data for this project

Field	Value
Business	Byte Repair
Tagline	Phone and laptop repairs while you wait
City	Nasr City
Owner	Mostafa Gamal
Brand colour	#0891b2
Accent colour	#ecfeff
Offers	Screen replacement (From 800 EGP); Battery swap (From 500 EGP); Laptop cleaning (350 EGP); Data recovery (From 1200 EGP)

Project 564: Event page for Sahara Pet Care

Theme: Sahara Pet Care (New Cairo) | Level 1 | Files: index.html, styles.css

Brief

Announce an event with a machine-readable date, key facts in a two-column description list, a numbered programme and a register button.

Learning goals

- Use <time> with a full datetime
- Lay out dl as a two-column grid
- Use ol for a sequence

Elements and CSS used

HTML elements	CSS features
article, time, h1, p, dl, dt, dd, h2, ol, li, b, a	grid-template-columns: max-content 1fr, gap (two values), border-radius, padding-left

Build guide

1. Write the date first with <time datetime="2026-10-15T18:00">.
2. Add heading and lead.
3. Add the facts list and programme.
4. Grid the dl: dt in the first column, dd in the second.
5. Style the button.
6. Validate the datetime format.

Project 564: index.html

```

Project 567 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Fayoum Pottery Studio open day</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
<article class="event">	A self-contained piece: card, post, product.
<p class="date"><time datetime="2026-10-15T18:00">Thursday 15 Octob...	A paragraph of text.
Fayoum Pottery Studio open day	The main heading; only one per page.
<dl class="facts">	Description list of term / description pairs.
<dt>Where</dt><dd>Fayoum Pottery Studio, Tunis Village</dd>	A term (name) in a description list.
<dt>Price</dt><dd>Free, registration required</dd>	The description of the preceding term.
Programme	Second-level heading for a section.

Line	What it does
	Ordered (numbered) list; the order matters.
18:00 Doors open	One list item.
18:30 Welcome talk	Keyword or name drawn to attention without extra importance.
Register now	A link styled as a button; it navigates, so it is a link and not a <button>.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #9a3412;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 44rem;	Limits how wide the element can grow, keeping lines readable.

Declaration	What it does
padding: 0 1rem;	Space inside the element between its border and content.
font-weight: 700;	Thickness of the text.
font-size: 1.2rem;	Size of the text.
display: grid;	Turns the element into a grid container.
grid-template-columns: max-content 1fr;	Defines the columns of the grid.
gap: .4rem 1.5rem;	Space between grid or flex items without extra margins.
background: var(--accent);	Background colour or image.
border-radius: 10px;	Rounds the corners.
display: inline-block;	Flows in text but accepts width, height and vertical padding.
border-radius: 999px;	Fully rounded pill shape.
text-decoration: none;	Removes the underline from links.

Check your work

- datetime is ISO format
- dt/dd pairs align
- Programme is an ordered list
- Button text is an action

Exercises

1. Add an 'Add to calendar' .ics link.
2. Add a map with an iframe.
3. Add a countdown with JavaScript.

Theme data for this project

Field	Value
Business	Fayoum Pottery Studio
Tagline	Wheel throwing and glazing classes
City	Tunis Village
Owner	Ahmed Mahmoud
Brand colour	#9a3412
Accent colour	#fff7ed
Offers	Intro to the wheel (450 EGP); Glazing day (300 EGP); Kids clay class (200 EGP); Weekend retreat (2500 EGP)

Project 568: Event page for Cleopatra Beauty Salon

Theme: Cleopatra Beauty Salon (Dokki) | Level 1 | Files: index.html, styles.css

Brief

Announce an event with a machine-readable date, key facts in a two-column description list, a numbered programme and a register button.

Learning goals

- Use <time> with a full datetime
- Lay out dl as a two-column grid
- Use ol for a sequence

Elements and CSS used

HTML elements	CSS features
article, time, h1, p, dl, dt, dd, h2, ol, li, b, a	grid-template-columns: max-content 1fr, gap (two values), border-radius, padding-left

Build guide

1. Write the date first with <time datetime="2026-10-15T18:00">.
2. Add heading and lead.
3. Add the facts list and programme.
4. Grid the dl: dt in the first column, dd in the second.
5. Style the button.
6. Validate the datetime format.

max-width: 44rem;	Limits how wide the element can grow, keeping lines readable.

Declaration	What it does
padding: 0 1rem;	Space inside the element between its border and content.
font-weight: 700;	Thickness of the text.
font-size: 1.2rem;	Size of the text.
display: grid;	Turns the element into a grid container.
grid-template-columns: max-content 1fr;	Defines the columns of the grid.
gap: .4rem 1.5rem;	Space between grid or flex items without extra margins.
background: var(--accent);	Background colour or image.
border-radius: 10px;	Rounds the corners.
display: inline-block;	Flows in text but accepts width, height and vertical padding.
border-radius: 999px;	Fully rounded pill shape.
text-decoration: none;	Removes the underline from links.

Check your work

- datetime is ISO format
- dt/dd pairs align
- Programme is an ordered list
- Button text is an action

Exercises

1. Add an 'Add to calendar' .ics link.
2. Add a map with an iframe.
3. Add a countdown with JavaScript.

Theme data for this project

Field	Value
Business	Luxor Music Academy
Tagline	Oud, piano, guitar and voice lessons
City	Luxor
Owner	Salma Ragab
Brand colour	#4c1d95
Accent colour	#f5f3ff
Offers	Oud for beginners (1600 EGP); Piano grade 1 (1800 EGP); Guitar chords (1400 EGP); Voice coaching (1500 EGP)

Project 571: Event page for Port Said Seafood

Theme: Port Said Seafood (Port Said) | Level 1 | Files: index.html, styles.css

Brief

Announce an event with a machine-readable date, key facts in a two-column description list, a numbered programme and a register button.

Learning goals

- Use <time> with a full datetime
- Lay out dl as a two-column grid
- Use ol for a sequence

Elements and CSS used

HTML elements	CSS features
article, time, h1, p, dl, dt, dd, h2, ol, li, b, a	grid-template-columns: max-content 1fr, gap (two values), border-radius, padding-left

Build guide

1. Write the date first with <time datetime="2026-10-15T18:00">.
2. Add heading and lead.
3. Add the facts list and programme.
4. Grid the dl: dt in the first column, dd in the second.
5. Style the button.
6. Validate the datetime format.

Project 571: index.html

```
<!DOCTYPE html>

Project 571 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Port Said Seafood open day</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
<article class="event">	A self-contained piece: card, post, product.
<p class="date"><time datetime="2026-10-15T18:00">Thursday 15 Octob...	A paragraph of text.
Port Said Seafood open day	The main heading; only one per page.
<dl class="facts">	Description list of term / description pairs.
<dt>Where</dt><dd>Port Said Seafood, Port Said</dd>	A term (name) in a description list.
<dt>Price</dt><dd>Free, registration required</dd>	The description of the preceding term.
Programme	Second-level heading for a section.

Line	What it does
	Ordered (numbered) list; the order matters.
18:00 Doors open	One list item.
18:30 Welcome talk	Keyword or name drawn to attention without extra importance.
Register now	A link styled as a button; it navigates, so it is a link and not a <button>.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #0e7490;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 44rem;	Limits how wide the element can grow, keeping lines readable.

Declaration	What it does
padding: 0 1rem;	Space inside the element between its border and content.
font-weight: 700;	Thickness of the text.
font-size: 1.2rem;	Size of the text.
display: grid;	Turns the element into a grid container.
grid-template-columns: max-content 1fr;	Defines the columns of the grid.
gap: .4rem 1.5rem;	Space between grid or flex items without extra margins.
background: var(--accent);	Background colour or image.
border-radius: 10px;	Rounds the corners.
display: inline-block;	Flows in text but accepts width, height and vertical padding.
border-radius: 999px;	Fully rounded pill shape.
text-decoration: none;	Removes the underline from links.

Check your work

- datetime is ISO format
- dt/dd pairs align
- Programme is an ordered list
- Button text is an action

Exercises

1. Add an 'Add to calendar' .ics link.
2. Add a map with an iframe.
3. Add a countdown with JavaScript.

Theme data for this project

Field	Value
Business	Port Said Seafood
Tagline	Grilled fish straight from the boats
City	Port Said
Owner	Sherif Wahba
Brand colour	#0e7490
Accent colour	#ecfeff
Offers	Grilled sea bass (320 EGP); Shrimp tagine (280 EGP); Calamari (190 EGP); Fish soup (120 EGP)

Project 572: Event page for Delta Kids Library

Theme: Delta Kids Library (Tanta) | Level 1 | Files: index.html, styles.css

Brief

Announce an event with a machine-readable date, key facts in a two-column description list, a numbered programme and a register button.

Learning goals

- Use <time> with a full datetime
- Lay out dl as a two-column grid
- Use ol for a sequence

Elements and CSS used

HTML elements	CSS features
article, time, h1, p, dl, dt, dd, h2, ol, li, b, a	grid-template-columns: max-content 1fr, gap (two values), border-radius, padding-left

Build guide

1. Write the date first with <time datetime="2026-10-15T18:00">.
2. Add heading and lead.
3. Add the facts list and programme.
4. Grid the dl: dt in the first column, dd in the second.
5. Style the button.
6. Validate the datetime format.

Project 572: index.html

Project 574 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Ismailia Cycling Store open day</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
<article class="event">	A self-contained piece: card, post, product.
<p class="date"><time datetime="2026-10-15T18:00">Thursday 15 Octob...	A paragraph of text.
Ismailia Cycling Store open day	The main heading; only one per page.
<dl class="facts">	Description list of term / description pairs.
<dt>Where</dt><dd>Ismailia Cycling Store, Ismailia</dd>	A term (name) in a description list.
<dt>Price</dt><dd>Free, registration required</dd>	The description of the preceding term.
Programme	Second-level heading for a section.

Line	What it does
	Ordered (numbered) list; the order matters.
18:00 Doors open	One list item.
18:30 Welcome talk	Keyword or name drawn to attention without extra importance.
Register now	A link styled as a button; it navigates, so it is a link and not a <button>.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #dc2626;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 44rem;	Limits how wide the element can grow, keeping lines readable.

Declaration	What it does
padding: 0 1rem;	Space inside the element between its border and content.
font-weight: 700;	Thickness of the text.
font-size: 1.2rem;	Size of the text.
display: grid;	Turns the element into a grid container.
grid-template-columns: max-content 1fr;	Defines the columns of the grid.
gap: .4rem 1.5rem;	Space between grid or flex items without extra margins.
background: var(--accent);	Background colour or image.
border-radius: 10px;	Rounds the corners.
display: inline-block;	Flows in text but accepts width, height and vertical padding.
border-radius: 999px;	Fully rounded pill shape.
text-decoration: none;	Removes the underline from links.

Check your work

- datetime is ISO format
- dt/dd pairs align
- Programme is an ordered list
- Button text is an action

Exercises

1. Add an 'Add to calendar' .ics link.
2. Add a map with an iframe.
3. Add a countdown with JavaScript.

Theme data for this project

Field	Value
Business	Ismailia Cycling Store
Tagline	Bikes, parts and Friday group rides
City	Ismailia
Owner	Bassem Adly
Brand colour	#dc2626
Accent colour	#fef2f2
Offers	City bike (6500 EGP); Mountain bike (11000 EGP); Kids bike (3200 EGP); Tune-up (250 EGP)

Project 575: Event page for Minya Coding Club

Theme: Minya Coding Club (Minya) | Level 1 | Files: index.html, styles.css

Brief

Announce an event with a machine-readable date, key facts in a two-column description list, a numbered programme and a register button.

Learning goals

- Use <time> with a full datetime
- Lay out dl as a two-column grid
- Use ol for a sequence

Elements and CSS used

HTML elements	CSS features
article, time, h1, p, dl, dt, dd, h2, ol, li, b, a	grid-template-columns: max-content 1fr, gap (two values), border-radius, padding-left

Build guide

1. Write the date first with <time datetime="2026-10-15T18:00">.
2. Add heading and lead.
3. Add the facts list and programme.
4. Grid the dl: dt in the first column, dd in the second.
5. Style the button.
6. Validate the datetime format.

Offers	HTML weekend (Free); CSS art (Free); Scratch games (Free); Hackathon (Free)

Project type: Printable invoice

Level 2 | 25 projects, one per theme

Create a clean invoice with a header row, a table using tfoot and colspan for the total, right-aligned numbers and print styles.

Project 576: Printable invoice for Cairo Book Shop

Theme: Cairo Book Shop (Giza) | Level 2 | Files: index.html, styles.css

Brief

Create a clean invoice with a header row, a table using tfoot and colspan for the total, right-aligned numbers and print styles.

Learning goals

- Use tfoot and colspan
- Align numbers with tabular figures
- Design for print

Elements and CSS used

HTML elements	CSS features
header, div, h1, p, b, time, table, thead, tbody, tfoot, th, td	justify-content: space-between, colspan, font-variant-numeric, border-top, @media print

Build guide

1. Write the header with two blocks: seller and invoice metadata.
2. Write the table with thead, tbody and a tfoot total row using colspan="2".
3. Add class n to numeric cells.
4. Flex the header with space-between.
5. Right-align .n cells.
6. Print preview and remove the border in @media print.

Project 576: index.html

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1">
  <title>Invoice 2026-041 - Cairo Book Shop</title>
  <link rel="stylesheet" href="styles.css">
</head>
<body>
  <main class="invoice">
    <header>
      <div><h1>Cairo Book Shop</h1><p>Giza, Egypt</p></div>
      <div class="meta"><p><b>Invoice</b> 2026-041</p><p><b>Date</b>
<time datetime="2026-09-11">11 Sep 2026</time></p></div>
    </header>
    <p><b>Bill to:</b> Customer name, Giza</p>
    <table>
      <thead><tr><th>Item</th><th class="n">Qty</th><th
class="n">Price</th></tr></thead>
      <tbody>
        <tr><td>Learn HTML</td><td class="n">1</td><td class="n">120

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Invoice 2026-041 - Cairo Book Shop</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main class="invoice">	The unique content of this page; exactly one per page.
<header>	Introductory content: logo, title, navigation.
Cairo Book Shop Giza, Egypt	The main heading; only one per page.
Invoice 2026-041 Date <tim...	A paragraph of text.
Bill to: Customer name, Giza	Keyword or name drawn to attention without extra importance.
<table>	Tabular data in rows and columns.
<thead><tr><th>Item</th><th class="n">Qty</th><th class="n">Price<//...	Group of header rows.

Line	What it does
<tbody>	Group of data rows.
<tr><td>Learn HTML</td><td class="n">1</td><td class="n">120 EGP</t...	A table row.
<tr><td>CSS in Practice</td><td class="n">1</td><td class="n">150 E...	A data cell.
<tfoot><tr><th colspan="2">Total</th><td class="n">see items</td><//...	Group of footer rows (totals).

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #b90000;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.

Declaration	What it does
max-width: 46rem;	Limits how wide the element can grow, keeping lines readable.
padding: 2rem;	Space inside the element between its border and content.
border: 1px solid var(--line);	Changes the visual order of a flex item without changing the source.
display: flex;	Turns the element into a flex container (one-dimensional layout).
justify-content: space-between;	Spreads items so the first touches the start and the last the end.
flex-wrap: wrap;	Allows flex items to move to a new line when they do not fit.
gap: 1rem;	Space between grid or flex items without extra margins.
border-bottom: 3px solid var(--brand);	A bottom border used as a separator line.
text-align: right;	Right-aligns inline content, typical for numbers.
width: 100%;	Fills the container width.
border-collapse: collapse;	Merges adjacent table cell borders into single lines.
border-bottom: 1px solid var(--line);	The line around the element: width, style and colour.
font-variant-numeric: tabular-nums;	Makes all digits the same width so columns of numbers line up.
font-weight: 700;	Thickness of the text.
border-top: 2px solid var(--ink);	A top border used as an accent or separator.

Declaration	What it does
@media print { .invoice { border: 0; margin: 0; max-width: none; } }	Removes the default border (for example on an iframe or button).

Check your work

- Numbers right-aligned
- Total row in tfoot
- Fits on one printed page
- Date has datetime

Exercises

1. Calculate the total with JavaScript.
2. Add a logo image.
3. Add a QR code image for payment.

border-top: 2px solid var(--ink);	A top border used as an accent or separator.

Declaration	What it does
@media print { .invoice { border: 0; margin: 0; max-width: none; } }	Removes the default border (for example on an iframe or button).

Check your work

- Numbers right-aligned
- Total row in tfoot
- Fits on one printed page
- Date has datetime

Exercises

1. Calculate the total with JavaScript.
2. Add a logo image.
3. Add a QR code image for payment.

Theme data for this project

Field	Value
Business	Nile Bakery
Tagline	Fresh bread and pastries every morning
City	Cairo
Owner	Sara Adel
Brand colour	#a0522d
Accent colour	#fff6ec
Offers	Sourdough loaf (60 EGP); Croissant (35 EGP); Date cookies (80 EGP); Baklava box (220 EGP)

Project 578: Printable invoice for Pyramid Fitness

Theme: Pyramid Fitness (6th of October) | Level 2 | Files: index.html, styles.css

Brief

Create a clean invoice with a header row, a table using tfoot and colspan for the total, right-aligned numbers and print styles.

Learning goals

- Use tfoot and colspan
- Align numbers with tabular figures
- Design for print

Elements and CSS used

HTML elements	CSS features
header, div, h1, p, b, time, table, thead, tbody, tfoot, th, td	justify-content: space-between, colspan, font-variant-numeric, border-top, @media print

Build guide

1. Write the header with two blocks: seller and invoice metadata.
2. Write the table with thead, tbody and a tfoot total row using colspan="2".
3. Add class n to numeric cells.
4. Flex the header with space-between.
5. Right-align .n cells.
6. Print preview and remove the border in @media print.

Project 578: index.html

```
<!DOCTYPE html>

Project 578 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Invoice 2026-041 - Pyramid Fitness</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main class="invoice">	The unique content of this page; exactly one per page.
<header>	Introductory content: logo, title, navigation.
Pyramid Fitness 6th of October, Egypt	The main heading; only one per page.
Invoice 2026-041 Date <tim...	A paragraph of text.
Bill to: Customer name, 6th of October	Keyword or name drawn to attention without extra importance.
<table>	Tabular data in rows and columns.
<thead><tr><th>Item</th><th class="n">Qty</th><th class="n">Price<//...	Group of header rows.

Line	What it does
<tbody>	Group of data rows.
<tr><td>Morning yoga</td><td class="n">1</td><td class="n">100 EGP<...	A table row.
<tr><td>Strength circuit</td><td class="n">1</td><td class="n">120 ...	A data cell.
<tfoot><tr><th colspan="2">Total</th><td class="n">see items</td><//...	Group of footer rows (totals).

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #0f766e;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.

Declaration	What it does
max-width: 46rem;	Limits how wide the element can grow, keeping lines readable.
padding: 2rem;	Space inside the element between its border and content.
border: 1px solid var(--line);	Changes the visual order of a flex item without changing the source.
display: flex;	Turns the element into a flex container (one-dimensional layout).
justify-content: space-between;	Spreads items so the first touches the start and the last the end.
flex-wrap: wrap;	Allows flex items to move to a new line when they do not fit.
gap: 1rem;	Space between grid or flex items without extra margins.
border-bottom: 3px solid var(--brand);	A bottom border used as a separator line.
text-align: right;	Right-aligns inline content, typical for numbers.
width: 100%;	Fills the container width.
border-collapse: collapse;	Merges adjacent table cell borders into single lines.
border-bottom: 1px solid var(--line);	The line around the element: width, style and colour.
font-variant-numeric: tabular-nums;	Makes all digits the same width so columns of numbers line up.
font-weight: 700;	Thickness of the text.
border-top: 2px solid var(--ink);	A top border used as an accent or separator.

Declaration	What it does
@media print { .invoice { border: 0; margin: 0; max-width: none; } }	Removes the default border (for example on an iframe or button).

Check your work

- Numbers right-aligned
- Total row in tfoot
- Fits on one printed page
- Date has datetime

Exercises

1. Calculate the total with JavaScript.
2. Add a logo image.
3. Add a QR code image for payment.

Theme data for this project

Field	Value
Business	Pyramid Fitness
Tagline	Train smarter, feel stronger
City	6th of October
Owner	Omar Farouk
Brand colour	#0f766e
Accent colour	#ecfdf5
Offers	Morning yoga (100 EGP); Strength circuit (120 EGP); Spinning (110 EGP); Personal training (350 EGP)

Project 579: Printable invoice for Delta Dental Clinic

Theme: Delta Dental Clinic (Mansoura) | Level 2 | Files: index.html, styles.css

Brief

Create a clean invoice with a header row, a table using tfoot and colspan for the total, right-aligned numbers and print styles.

Learning goals

- Use tfoot and colspan
- Align numbers with tabular figures
- Design for print

Elements and CSS used

HTML elements	CSS features
header, div, h1, p, b, time, table, thead, tbody, tfoot, th, td	justify-content: space-between, colspan, font-variant-numeric, border-top, @media print

Build guide

1. Write the header with two blocks: seller and invoice metadata.
2. Write the table with thead, tbody and a tfoot total row using colspan="2".
3. Add class n to numeric cells.
4. Flex the header with space-between.
5. Right-align .n cells.
6. Print preview and remove the border in @media print.

- Fits on one printed page
- Date has datetime

Exercises

1. Calculate the total with JavaScript.
2. Add a logo image.
3. Add a QR code image for payment.

Theme data for this project

Field	Value
Business	Red Sea Travel
Tagline	Discover Egypt from desert to reef
City	Hurghada
Owner	Laila Mansour
Brand colour	#0369a1
Accent colour	#f0f9ff
Offers	Luxor day trip (1200 EGP); Snorkelling (700 EGP); Desert safari (900 EGP); Nile cruise (6500 EGP)

Project 581: Printable invoice for Lotus Language School

Theme: Lotus Language School (Alexandria) | Level 2 | Files: index.html, styles.css

Brief

Create a clean invoice with a header row, a table using tfoot and colspan for the total, right-aligned numbers and print styles.

Learning goals

- Use tfoot and colspan
- Align numbers with tabular figures
- Design for print

Elements and CSS used

HTML elements	CSS features
header, div, h1, p, b, time, table, thead, tbody, tfoot, th, td	justify-content: space-between, colspan, font-variant-numeric, border-top, @media print

Build guide

1. Write the header with two blocks: seller and invoice metadata.
2. Write the table with thead, tbody and a tfoot total row using colspan="2".
3. Add class n to numeric cells.
4. Flex the header with space-between.
5. Right-align .n cells.
6. Print preview and remove the border in @media print.

Project 581: index.html

Project 581 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Invoice 2026-041 - Lotus Language School</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main class="invoice">	The unique content of this page; exactly one per page.
<header>	Introductory content: logo, title, navigation.
Lotus Language School Alexandria, Egypt	The main heading; only one per page.
Invoice 2026-041 Date <tim...	A paragraph of text.
Bill to: Customer name, Alexandria	Keyword or name drawn to attention without extra importance.
<table>	Tabular data in rows and columns.
<thead><tr><th>Item</th><th class="n">Qty</th><th class="n">Price<//...	Group of header rows.

Line	What it does
<tbody>	Group of data rows.
<tr><td>English A1</td><td class="n">1</td><td class="n">1800 EGP<//...	A table row.
<tr><td>French B1</td><td class="n">1</td><td class="n">2200 EGP</t...	A data cell.
<tfoot><tr><th colspan="2">Total</th><td class="n">see items</td><//...	Group of footer rows (totals).

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #7c3aed;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.

Declaration	What it does
max-width: 46rem;	Limits how wide the element can grow, keeping lines readable.
padding: 2rem;	Space inside the element between its border and content.
border: 1px solid var(--line);	Changes the visual order of a flex item without changing the source.
display: flex;	Turns the element into a flex container (one-dimensional layout).
justify-content: space-between;	Spreads items so the first touches the start and the last the end.
flex-wrap: wrap;	Allows flex items to move to a new line when they do not fit.
gap: 1rem;	Space between grid or flex items without extra margins.
border-bottom: 3px solid var(--brand);	A bottom border used as a separator line.
text-align: right;	Right-aligns inline content, typical for numbers.
width: 100%;	Fills the container width.
border-collapse: collapse;	Merges adjacent table cell borders into single lines.
border-bottom: 1px solid var(--line);	The line around the element: width, style and colour.
font-variant-numeric: tabular-nums;	Makes all digits the same width so columns of numbers line up.
font-weight: 700;	Thickness of the text.
border-top: 2px solid var(--ink);	A top border used as an accent or separator.

Declaration	What it does
@media print { .invoice { border: 0; margin: 0; max-width: none; } }	Removes the default border (for example on an iframe or button).

Check your work

- Numbers right-aligned
- Total row in tfoot
- Fits on one printed page
- Date has datetime

Exercises

1. Calculate the total with JavaScript.
2. Add a logo image.
3. Add a QR code image for payment.

Theme data for this project

Field	Value
Business	Lotus Language School
Tagline	Learn English, French and German in small groups
City	Alexandria
Owner	Nour El Din
Brand colour	#7c3aed
Accent colour	#f5f3ff
Offers	English A1 (1800 EGP); French B1 (2200 EGP); German A2 (2000 EGP); IELTS preparation (3000 EGP)

Project 582: Printable invoice for Green Leaf Cafe

Theme: Green Leaf Cafe (Zamalek) | Level 2 | Files: index.html, styles.css

Brief

Create a clean invoice with a header row, a table using tfoot and colspan for the total, right-aligned numbers and print styles.

Learning goals

- Use tfoot and colspan
- Align numbers with tabular figures
- Design for print

Elements and CSS used

HTML elements	CSS features
header, div, h1, p, b, time, table, thead, tbody, tfoot, th, td	justify-content: space-between, colspan, font-variant-numeric, border-top, @media print

Build guide

1. Write the header with two blocks: seller and invoice metadata.
2. Write the table with thead, tbody and a tfoot total row using colspan="2".
3. Add class n to numeric cells.
4. Flex the header with space-between.
5. Right-align .n cells.
6. Print preview and remove the border in @media print.

Project 582: index.html

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="utf-8">

Invoice 2026-041 Date <tim...	A paragraph of text.
Bill to: Customer name, Maadi	Keyword or name drawn to attention without extra importance.
<table>	Tabular data in rows and columns.
<thead><tr><th>Item</th><th class="n">Qty</th><th class="n">Price<//...	Group of header rows.

Line	What it does
<tbody>	Group of data rows.
<tr><td>Portrait session</td><td class="n">1</td><td class="n">1200...	A table row.
<tr><td>Wedding day</td><td class="n">1</td><td class="n">15000 EGP...	A data cell.
<tfoot><tr><th colspan="2">Total</th><td class="n">see items</td><//...	Group of footer rows (totals).

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #111827;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.

Declaration	What it does
max-width: 46rem;	Limits how wide the element can grow, keeping lines readable.
padding: 2rem;	Space inside the element between its border and content.
border: 1px solid var(--line);	Changes the visual order of a flex item without changing the source.
display: flex;	Turns the element into a flex container (one-dimensional layout).
justify-content: space-between;	Spreads items so the first touches the start and the last the end.
flex-wrap: wrap;	Allows flex items to move to a new line when they do not fit.
gap: 1rem;	Space between grid or flex items without extra margins.
border-bottom: 3px solid var(--brand);	A bottom border used as a separator line.
text-align: right;	Right-aligns inline content, typical for numbers.
width: 100%;	Fills the container width.
border-collapse: collapse;	Merges adjacent table cell borders into single lines.
border-bottom: 1px solid var(--line);	The line around the element: width, style and colour.
font-variant-numeric: tabular-nums;	Makes all digits the same width so columns of numbers line up.
font-weight: 700;	Thickness of the text.
border-top: 2px solid var(--ink);	A top border used as an accent or separator.

Declaration	What it does
@media print { .invoice { border: 0; margin: 0; max-width: none; } }	Removes the default border (for example on an iframe or button).

Check your work

- Numbers right-aligned
- Total row in tfoot
- Fits on one printed page
- Date has datetime

Exercises

1. Calculate the total with JavaScript.
2. Add a logo image.
3. Add a QR code image for payment.

Theme data for this project

Field	Value
Business	Horizon Photography
Tagline	Portraits, weddings and product photography
City	Maadi
Owner	Adham Nabil
Brand colour	#111827
Accent colour	#f3f4f6
Offers	Portrait session (1200 EGP); Wedding day (15000 EGP); Product shoot (900 EGP); Family session (1500 EGP)

Project 585: Printable invoice for Papyrus Stationery

Theme: Papyrus Stationery (Heliopolis) | Level 2 | Files: index.html, styles.css

Brief

Create a clean invoice with a header row, a table using tfoot and colspan for the total, right-aligned numbers and print styles.

Learning goals

- Use tfoot and colspan
- Align numbers with tabular figures
- Design for print

Elements and CSS used

HTML elements	CSS features
header, div, h1, p, b, time, table, thead, tbody, tfoot, th, td	justify-content: space-between, colspan, font-variant-numeric, border-top, @media print

Build guide

1. Write the header with two blocks: seller and invoice metadata.
2. Write the table with thead, tbody and a tfoot total row using colspan="2".
3. Add class n to numeric cells.
4. Flex the header with space-between.
5. Right-align .n cells.
6. Print preview and remove the border in @media print.

Project 585: index.html

```

Tagline	Solid wood furniture made to order
City	Damietta
Owner	Tarek Lotfy
Brand colour	#78350f
Accent colour	#fef3c7
Offers	Oak dining table (9500 EGP); Bookshelf (4200 EGP); Bedside table (1500 EGP); Coffee table (2800 EGP)

Project 588: Printable invoice for Byte Repair

Theme: Byte Repair (Nasr City) | Level 2 | Files: index.html, styles.css

Brief

Create a clean invoice with a header row, a table using tfoot and colspan for the total, right-aligned numbers and print styles.

Learning goals

- Use tfoot and colspan
- Align numbers with tabular figures
- Design for print

Elements and CSS used

HTML elements	CSS features
header, div, h1, p, b, time, table, thead, tbody, tfoot, th, td	justify-content: space-between, colspan, font-variant-numeric, border-top, @media print

Build guide

1. Write the header with two blocks: seller and invoice metadata.
2. Write the table with thead, tbody and a tfoot total row using colspan="2".
3. Add class n to numeric cells.
4. Flex the header with space-between.
5. Right-align .n cells.
6. Print preview and remove the border in @media print.

Project 588: index.html

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="utf-8">

.thanks { margin-top: 2rem; color: var(--muted); font-style: italic; }
@media print { .invoice { border: 0; margin: 0; max-width: none; } }
```

Project 588 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Invoice 2026-041 - Byte Repair</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main class="invoice">	The unique content of this page; exactly one per page.
<header>	Introductory content: logo, title, navigation.
Byte Repair Nasr City, Egypt	The main heading; only one per page.
Invoice 2026-041 Date <tim...	A paragraph of text.
Bill to: Customer name, Nasr City	Keyword or name drawn to attention without extra importance.
<table>	Tabular data in rows and columns.
<thead><tr><th>Item</th><th class="n">Qty</th><th class="n">Price<//...	Group of header rows.

Line	What it does
<tbody>	Group of data rows.
<tr><td>Screen replacement</td><td class="n">1</td><td class="n">Fr...	A table row.
<tr><td>Battery swap</td><td class="n">1</td><td class="n">From 500...	A data cell.
<tfoot><tr><th colspan="2">Total</th><td class="n">see items</td><//...	Group of footer rows (totals).

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #0891b2;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.

Declaration	What it does
max-width: 46rem;	Limits how wide the element can grow, keeping lines readable.
padding: 2rem;	Space inside the element between its border and content.
border: 1px solid var(--line);	Changes the visual order of a flex item without changing the source.
display: flex;	Turns the element into a flex container (one-dimensional layout).
justify-content: space-between;	Spreads items so the first touches the start and the last the end.
flex-wrap: wrap;	Allows flex items to move to a new line when they do not fit.
gap: 1rem;	Space between grid or flex items without extra margins.
border-bottom: 3px solid var(--brand);	A bottom border used as a separator line.
text-align: right;	Right-aligns inline content, typical for numbers.
width: 100%;	Fills the container width.
border-collapse: collapse;	Merges adjacent table cell borders into single lines.
border-bottom: 1px solid var(--line);	The line around the element: width, style and colour.
font-variant-numeric: tabular-nums;	Makes all digits the same width so columns of numbers line up.
font-weight: 700;	Thickness of the text.
border-top: 2px solid var(--ink);	A top border used as an accent or separator.

Declaration	What it does
@media print { .invoice { border: 0; margin: 0; max-width: none; } }	Removes the default border (for example on an iframe or button).

Check your work

- Numbers right-aligned
- Total row in tfoot
- Fits on one printed page
- Date has datetime

Exercises

1. Calculate the total with JavaScript.
2. Add a logo image.
3. Add a QR code image for payment.

Theme data for this project

Field	Value
Business	Byte Repair
Tagline	Phone and laptop repairs while you wait
City	Nasr City
Owner	Mostafa Gamal
Brand colour	#0891b2
Accent colour	#ecfeff
Offers	Screen replacement (From 800 EGP); Battery swap (From 500 EGP); Laptop cleaning (350 EGP); Data recovery (From 1200 EGP)

Project 589: Printable invoice for Sahara Pet Care

Theme: Sahara Pet Care (New Cairo) | Level 2 | Files: index.html, styles.css

Brief

Create a clean invoice with a header row, a table using tfoot and colspan for the total, right-aligned numbers and print styles.

Learning goals

- Use tfoot and colspan
- Align numbers with tabular figures
- Design for print

Elements and CSS used

HTML elements	CSS features
header, div, h1, p, b, time, table, thead, tbody, tfoot, th, td	justify-content: space-between, colspan, font-variant-numeric, border-top, @media print

Build guide

1. Write the header with two blocks: seller and invoice metadata.
2. Write the table with thead, tbody and a tfoot total row using colspan="2".
3. Add class n to numeric cells.
4. Flex the header with space-between.
5. Right-align .n cells.
6. Print preview and remove the border in @media print.

Project 591 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Invoice 2026-041 - Habiba Handmade Jewellery</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main class="invoice">	The unique content of this page; exactly one per page.
<header>	Introductory content: logo, title, navigation.
Habiba Handmade Jewellery Aswan, Egypt	The main heading; only one per page.
Invoice 2026-041 Date <tim...	A paragraph of text.
Bill to: Customer name, Aswan	Keyword or name drawn to attention without extra importance.
<table>	Tabular data in rows and columns.

Line	What it does
<thead><tr><th>Item</th><th class="n">Qty</th><th class="n">Price<//...	Group of header rows.
<tbody>	Group of data rows.
<tr><td>Lotus pendant</td><td class="n">1</td><td class="n">650 EGP...	A table row.
<tr><td>Brass cuff</td><td class="n">1</td><td class="n">420 EGP</t...	A data cell.
<tfoot><tr><th colspan="2">Total</th><td class="n">see items</td><//...	Group of footer rows (totals).

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #a16207;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.

Declaration	What it does
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 46rem;	Limits how wide the element can grow, keeping lines readable.
padding: 2rem;	Space inside the element between its border and content.
border: 1px solid var(--line);	Changes the visual order of a flex item without changing the source.
display: flex;	Turns the element into a flex container (one-dimensional layout).
justify-content: space-between;	Spreads items so the first touches the start and the last the end.
flex-wrap: wrap;	Allows flex items to move to a new line when they do not fit.
gap: 1rem;	Space between grid or flex items without extra margins.
border-bottom: 3px solid var(--brand);	A bottom border used as a separator line.
text-align: right;	Right-aligns inline content, typical for numbers.
width: 100%;	Fills the container width.
border-collapse: collapse;	Merges adjacent table cell borders into single lines.
border-bottom: 1px solid var(--line);	The line around the element: width, style and colour.
font-variant-numeric: tabular-nums;	Makes all digits the same width so columns of numbers line up.
font-weight: 700;	Thickness of the text.

Declaration	What it does
border-top: 2px solid var(--ink);	A top border used as an accent or separator.
@media print { .invoice { border: 0; margin: 0; max-width: none; } }	Removes the default border (for example on an iframe or button).

Check your work

- Numbers right-aligned
- Total row in tfoot
- Fits on one printed page
- Date has datetime

Exercises

1. Calculate the total with JavaScript.
2. Add a logo image.
3. Add a QR code image for payment.

Theme data for this project

Field	Value
Business	Habiba Handmade Jewellery
Tagline	Silver and brass pieces inspired by Nubia
City	Aswan
Owner	Habiba Saleh
Brand colour	#a16207
Accent colour	#fefce8
Offers	Lotus pendant (650 EGP); Brass cuff (420 EGP); Bead earrings (180 EGP); Ankh ring (300 EGP)

Project 592: Printable invoice for Fayoum Pottery Studio

Theme: Fayoum Pottery Studio (Tunis Village) | Level 2 | Files: index.html, styles.css

Brief

Create a clean invoice with a header row, a table using tfoot and colspan for the total, right-aligned numbers and print styles.

Learning goals

- Use tfoot and colspan
- Align numbers with tabular figures
- Design for print

Elements and CSS used

HTML elements	CSS features
header, div, h1, p, b, time, table, thead, tbody, tfoot, th, td	justify-content: space-between, colspan, font-variant-numeric, border-top, @media print

Build guide

1. Write the header with two blocks: seller and invoice metadata.
2. Write the table with thead, tbody and a tfoot total row using colspan="2".
3. Add class n to numeric cells.
4. Flex the header with space-between.
5. Right-align .n cells.
6. Print preview and remove the border in @media print.

Project 592: index.html

```
<!DOCTYPE html>

<tfoot><tr><th colspan="2">Total</th><td class="n">see items</td><//...	Group of footer rows (totals).

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #374151;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.

Declaration	What it does
max-width: 46rem;	Limits how wide the element can grow, keeping lines readable.
padding: 2rem;	Space inside the element between its border and content.
border: 1px solid var(--line);	Changes the visual order of a flex item without changing the source.
display: flex;	Turns the element into a flex container (one-dimensional layout).
justify-content: space-between;	Spreads items so the first touches the start and the last the end.
flex-wrap: wrap;	Allows flex items to move to a new line when they do not fit.
gap: 1rem;	Space between grid or flex items without extra margins.
border-bottom: 3px solid var(--brand);	A bottom border used as a separator line.
text-align: right;	Right-aligns inline content, typical for numbers.
width: 100%;	Fills the container width.
border-collapse: collapse;	Merges adjacent table cell borders into single lines.
border-bottom: 1px solid var(--line);	The line around the element: width, style and colour.
font-variant-numeric: tabular-nums;	Makes all digits the same width so columns of numbers line up.
font-weight: 700;	Thickness of the text.
border-top: 2px solid var(--ink);	A top border used as an accent or separator.

Declaration	What it does
@media print { .invoice { border: 0; margin: 0; max-width: none; } }	Removes the default border (for example on an iframe or button).

Check your work

- Numbers right-aligned
- Total row in tfoot
- Fits on one printed page
- Date has datetime

Exercises

1. Calculate the total with JavaScript.
2. Add a logo image.
3. Add a QR code image for payment.

Theme data for this project

Field	Value
Business	Suez Auto Service
Tagline	Honest car servicing and repairs
City	Suez
Owner	Khaled Nasser
Brand colour	#374151
Accent colour	#f9fafb
Offers	Oil change (600 EGP); Brake pads (1400 EGP); Air conditioning (900 EGP); Pre-purchase inspection (750 EGP)

Project 595: Printable invoice for Luxor Music Academy

Theme: Luxor Music Academy (Luxor) | Level 2 | Files: index.html, styles.css

Brief

Create a clean invoice with a header row, a table using tfoot and colspan for the total, right-aligned numbers and print styles.

Learning goals

- Use tfoot and colspan
- Align numbers with tabular figures
- Design for print

Elements and CSS used

HTML elements	CSS features
header, div, h1, p, b, time, table, thead, tbody, tfoot, th, td	justify-content: space-between, colspan, font-variant-numeric, border-top, @media print

Build guide

1. Write the header with two blocks: seller and invoice metadata.
2. Write the table with thead, tbody and a tfoot total row using colspan="2".
3. Add class n to numeric cells.
4. Flex the header with space-between.
5. Right-align .n cells.
6. Print preview and remove the border in @media print.

Project 595: index.html

```

Offers	Story hour (Free); Reading club (50 EGP per month); Homework help (Free); Summer challenge (Free)

Project 598: Printable invoice for Nubian Guest House

Theme: Nubian Guest House (Aswan) | Level 2 | Files: index.html, styles.css

Brief

Create a clean invoice with a header row, a table using tfoot and colspan for the total, right-aligned numbers and print styles.

Learning goals

- Use tfoot and colspan
- Align numbers with tabular figures
- Design for print

Elements and CSS used

HTML elements	CSS features
header, div, h1, p, b, time, table, thead, tbody, tfoot, th, td	justify-content: space-between, colspan, font-variant-numeric, border-top, @media print

Build guide

1. Write the header with two blocks: seller and invoice metadata.
2. Write the table with thead, tbody and a tfoot total row using colspan="2".
3. Add class n to numeric cells.
4. Flex the header with space-between.
5. Right-align .n cells.
6. Print preview and remove the border in @media print.

Project 598: index.html

```
<!DOCTYPE html>

```

Project 598 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Invoice 2026-041 - Nubian Guest House</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main class="invoice">	The unique content of this page; exactly one per page.
<header>	Introductory content: logo, title, navigation.
Nubian Guest House Aswan, Egypt	The main heading; only one per page.
Invoice 2026-041 Date <tim...	A paragraph of text.
Bill to: Customer name, Aswan	Keyword or name drawn to attention without extra importance.
<table>	Tabular data in rows and columns.
<thead><tr><th>Item</th><th class="n">Qty</th><th class="n">Price<//...	Group of header rows.

Line	What it does
<tbody>	Group of data rows.
<tr><td>Garden room</td><td class="n">1</td><td class="n">900 EGP<//...	A table row.
<tr><td>Nile view suite</td><td class="n">1</td><td class="n">1800 ...	A data cell.
<tfoot><tr><th colspan="2">Total</th><td class="n">see items</td><//...	Group of footer rows (totals).

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #b45309;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.

Declaration	What it does
max-width: 46rem;	Limits how wide the element can grow, keeping lines readable.
padding: 2rem;	Space inside the element between its border and content.
border: 1px solid var(--line);	Changes the visual order of a flex item without changing the source.
display: flex;	Turns the element into a flex container (one-dimensional layout).
justify-content: space-between;	Spreads items so the first touches the start and the last the end.
flex-wrap: wrap;	Allows flex items to move to a new line when they do not fit.
gap: 1rem;	Space between grid or flex items without extra margins.
border-bottom: 3px solid var(--brand);	A bottom border used as a separator line.
text-align: right;	Right-aligns inline content, typical for numbers.
width: 100%;	Fills the container width.
border-collapse: collapse;	Merges adjacent table cell borders into single lines.
border-bottom: 1px solid var(--line);	The line around the element: width, style and colour.
font-variant-numeric: tabular-nums;	Makes all digits the same width so columns of numbers line up.
font-weight: 700;	Thickness of the text.
border-top: 2px solid var(--ink);	A top border used as an accent or separator.

Declaration	What it does
@media print { .invoice { border: 0; margin: 0; max-width: none; } }	Removes the default border (for example on an iframe or button).

Check your work

- Numbers right-aligned
- Total row in tfoot
- Fits on one printed page
- Date has datetime

Exercises

1. Calculate the total with JavaScript.
2. Add a logo image.
3. Add a QR code image for payment.

Theme data for this project

Field	Value
Business	Nubian Guest House
Tagline	Colourful rooms on the west bank of the Nile
City	Aswan
Owner	Fatma Hassan
Brand colour	#b45309
Accent colour	#fffbeb
Offers	Garden room (900 EGP); Nile view suite (1800 EGP); Family room (1500 EGP); Rooftop dorm (300 EGP)

Project 599: Printable invoice for Ismailia Cycling Store

Theme: Ismailia Cycling Store (Ismailia) | Level 2 | Files: index.html, styles.css

Brief

Create a clean invoice with a header row, a table using tfoot and colspan for the total, right-aligned numbers and print styles.

Learning goals

- Use tfoot and colspan
- Align numbers with tabular figures
- Design for print

Elements and CSS used

HTML elements	CSS features
header, div, h1, p, b, time, table, thead, tbody, tfoot, th, td	justify-content: space-between, colspan, font-variant-numeric, border-top, @media print

Build guide

1. Write the header with two blocks: seller and invoice metadata.
2. Write the table with thead, tbody and a tfoot total row using colspan="2".
3. Add class n to numeric cells.
4. Flex the header with space-between.
5. Right-align .n cells.
6. Print preview and remove the border in @media print.

Project 599: index.html

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="utf-8">

Offers	City bike (6500 EGP); Mountain bike (11000 EGP); Kids bike (3200 EGP); Tune-up (250 EGP)

Project 600: Printable invoice for Minya Coding Club

Theme: Minya Coding Club (Minya) | Level 2 | Files: index.html, styles.css

Brief

Create a clean invoice with a header row, a table using tfoot and colspan for the total, right-aligned numbers and print styles.

Learning goals

- Use tfoot and colspan
- Align numbers with tabular figures
- Design for print

Elements and CSS used

HTML elements	CSS features
header, div, h1, p, b, time, table, thead, tbody, tfoot, th, td	justify-content: space-between, colspan, font-variant-numeric, border-top, @media print

Build guide

1. Write the header with two blocks: seller and invoice metadata.
2. Write the table with thead, tbody and a tfoot total row using colspan="2".
3. Add class n to numeric cells.
4. Flex the header with space-between.
5. Right-align .n cells.
6. Print preview and remove the border in @media print.

Project 600: index.html

@media print { .invoice { border: 0; margin: 0; max-width: none; } }	Removes the default border (for example on an iframe or button).

Check your work

- Numbers right-aligned
- Total row in tfoot
- Fits on one printed page
- Date has datetime

Exercises

1. Calculate the total with JavaScript.
2. Add a logo image.
3. Add a QR code image for payment.

Theme data for this project

Field	Value
Business	Minya Coding Club
Tagline	Free weekend coding for teenagers
City	Minya
Owner	Youssef Hany
Brand colour	#2563eb
Accent colour	#eff6ff
Offers	HTML weekend (Free); CSS art (Free); Scratch games (Free); Hackathon (Free)

Project type: Feature list with icons

Level 1 | 25 projects, one per theme

Present four features as a two-column list where each item is a media object: an icon box on the left and text on the right.

Project 601: Feature list with icons for Cairo Book Shop

Theme: Cairo Book Shop (Giza) | Level 1 | Files: index.html, styles.css

Brief

Present four features as a two-column list where each item is a media object: an icon box on the left and text on the right.

Learning goals

- Build the media object pattern with Flexbox
- Hide decorative icons from screen readers
- Use flex: 0 0 for fixed-size boxes

Elements and CSS used

HTML elements	CSS features
ul, li, span, div, h2, p	display: flex, align-items: flex-start, flex: 0 0 3rem, place-items, grid auto-fit

Build guide

1. Write the list; each li has an icon span and a div with h2 and p.
2. Add aria-hidden="true" to the icon.
3. Make li a flex row.
4. Fix the icon size with flex: 0 0 3rem and centre the glyph.
5. Grid the list into two columns when wide.
6. Check the text wraps under itself, not under the icon.

Project 601: index.html

```
<!DOCTYPE html>
<html lang="en">

Project 601 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Cairo Book Shop - Features</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
What we offer	The main heading; only one per page.
<ul class="features">	Unordered (bulleted) list.
✔ <h2>L...	Second-level heading for a section.
★ <h2>CS...	A paragraph of text.
♥ <h2>Ja...	One list item.

Line	What it does
✈ <h2>We...	Generic inline container for styling.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #b90000;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 56rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
list-style: none;	Removes bullets or numbers from a list.
display: grid;	Turns the element into a grid container.
gap: 1.5rem;	Space between grid or flex items without extra margins.

Declaration	What it does
grid-template-columns: repeat(auto-fit, minmax(20rem, 1fr));	Defines the columns of the grid.
display: flex;	Turns the element into a flex container (one-dimensional layout).
flex: 0 0 3rem;	Fixed size: never grows or shrinks.
place-items: center;	Centres items horizontally and vertically in a grid.
background: var(--brand);	Background colour or image.
border-radius: 12px;	Rounds the corners.
font-size: 1.4rem;	Size of the text.

Check your work

- Icons hidden from assistive tech
- Text does not wrap under the icon
- Two columns on desktop, one on mobile
- Headings are h2

Exercises

1. Replace the glyphs with inline SVG icons.
2. Add a hover effect on the icon box.
3. Make the icon box a circle.

Theme data for this project

Field	Value
Business	Cairo Book Shop
Tagline	PDF and printed books about web development
City	Giza

Field	Value
Owner	Mohamed Khattab
Brand colour	#b90000
Accent colour	#f4f1ea
Offers	Learn HTML (120 EGP); CSS in Practice (150 EGP); JavaScript Basics (180 EGP); Web Accessibility (95 EGP)

Project 602: Feature list with icons for Nile Bakery

Theme: Nile Bakery (Cairo) | Level 1 | Files: index.html, styles.css

Brief

Present four features as a two-column list where each item is a media object: an icon box on the left and text on the right.

Learning goals

- Build the media object pattern with Flexbox
- Hide decorative icons from screen readers
- Use flex: 0 0 for fixed-size boxes

Elements and CSS used

HTML elements	CSS features
ul, li, span, div, h2, p	display: flex, align-items: flex-start, flex: 0 0 3rem, place-items, grid auto-fit

Build guide

1. Write the list; each li has an icon span and a div with h2 and p.
2. Add aria-hidden="true" to the icon.
3. Make li a flex row.
4. Fix the icon size with flex: 0 0 3rem and centre the glyph.
5. Grid the list into two columns when wide.
6. Check the text wraps under itself, not under the icon.

♥ <h2>De...	One list item.

Line	What it does
✈ <h2>Ni...	Generic inline container for styling.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #0369a1;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 56rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
list-style: none;	Removes bullets or numbers from a list.
display: grid;	Turns the element into a grid container.
gap: 1.5rem;	Space between grid or flex items without extra margins.

Declaration	What it does
grid-template-columns: repeat(auto-fit, minmax(20rem, 1fr));	Defines the columns of the grid.
display: flex;	Turns the element into a flex container (one-dimensional layout).
flex: 0 0 3rem;	Fixed size: never grows or shrinks.
place-items: center;	Centres items horizontally and vertically in a grid.
background: var(--brand);	Background colour or image.
border-radius: 12px;	Rounds the corners.
font-size: 1.4rem;	Size of the text.

Check your work

- Icons hidden from assistive tech
- Text does not wrap under the icon
- Two columns on desktop, one on mobile
- Headings are h2

Exercises

1. Replace the glyphs with inline SVG icons.
2. Add a hover effect on the icon box.
3. Make the icon box a circle.

Business	Red Sea Travel
Tagline	Discover Egypt from desert to reef
City	Hurghada

Field	Value
Owner	Laila Mansour
Brand colour	#0369a1
Accent colour	#f0f9ff
Offers	Luxor day trip (1200 EGP); Snorkelling (700 EGP); Desert safari (900 EGP); Nile cruise (6500 EGP)

Project 606: Feature list with icons for Lotus Language School

Theme: Lotus Language School (Alexandria) | Level 1 | Files: index.html, styles.css

Brief

Present four features as a two-column list where each item is a media object: an icon box on the left and text on the right.

Learning goals

- Build the media object pattern with Flexbox
- Hide decorative icons from screen readers
- Use flex: 0 0 for fixed-size boxes

Elements and CSS used

HTML elements	CSS features
ul, li, span, div, h2, p	display: flex, align-items: flex-start, flex: 0 0 3rem, place-items, grid auto-fit

Build guide

1. Write the list; each li has an icon span and a div with h2 and p.
2. Add aria-hidden="true" to the icon.
3. Make li a flex row.
4. Fix the icon size with flex: 0 0 3rem and centre the glyph.
5. Grid the list into two columns when wide.
6. Check the text wraps under itself, not under the icon.

Project 606: index.html

gap: 1.5rem;	Space between grid or flex items without extra margins.

Declaration	What it does
grid-template-columns: repeat(auto-fit, minmax(20rem, 1fr));	Defines the columns of the grid.
display: flex;	Turns the element into a flex container (one-dimensional layout).
flex: 0 0 3rem;	Fixed size: never grows or shrinks.
place-items: center;	Centres items horizontally and vertically in a grid.
background: var(--brand);	Background colour or image.
border-radius: 12px;	Rounds the corners.
font-size: 1.4rem;	Size of the text.

Check your work

- Icons hidden from assistive tech
- Text does not wrap under the icon
- Two columns on desktop, one on mobile
- Headings are h2

Exercises

1. Replace the glyphs with inline SVG icons.
2. Add a hover effect on the icon box.
3. Make the icon box a circle.

Theme data for this project

Field	Value
Business	Horizon Photography
Tagline	Portraits, weddings and product photography
City	Maadi

Field	Value
Owner	Adham Nabil
Brand colour	#111827
Accent colour	#f3f4f6
Offers	Portrait session (1200 EGP); Wedding day (15000 EGP); Product shoot (900 EGP); Family session (1500 EGP)

Project 610: Feature list with icons for Papyrus Stationery

Theme: Papyrus Stationery (Heliopolis) | Level 1 | Files: index.html, styles.css

Brief

Present four features as a two-column list where each item is a media object: an icon box on the left and text on the right.

Learning goals

- Build the media object pattern with Flexbox
- Hide decorative icons from screen readers
- Use flex: 0 0 for fixed-size boxes

Elements and CSS used

HTML elements	CSS features
ul, li, span, div, h2, p	display: flex, align-items: flex-start, flex: 0 0 3rem, place-items, grid auto-fit

Build guide

1. Write the list; each li has an icon span and a div with h2 and p.
2. Add aria-hidden="true" to the icon.
3. Make li a flex row.
4. Fix the icon size with flex: 0 0 3rem and centre the glyph.
5. Grid the list into two columns when wide.
6. Check the text wraps under itself, not under the icon.

Project 610: index.html

Project 614: Feature list with icons for Sahara Pet Care

Theme: Sahara Pet Care (New Cairo) | Level 1 | Files: index.html, styles.css

Brief

Present four features as a two-column list where each item is a media object: an icon box on the left and text on the right.

Learning goals

- Build the media object pattern with Flexbox
- Hide decorative icons from screen readers
- Use flex: 0 0 for fixed-size boxes

Elements and CSS used

HTML elements	CSS features
ul, li, span, div, h2, p	display: flex, align-items: flex-start, flex: 0 0 3rem, place-items, grid auto-fit

Build guide

1. Write the list; each li has an icon span and a div with h2 and p.
2. Add aria-hidden="true" to the icon.
3. Make li a flex row.
4. Fix the icon size with flex: 0 0 3rem and centre the glyph.
5. Grid the list into two columns when wide.
6. Check the text wraps under itself, not under the icon.

Project 614: index.html

```

center; background: var(--brand); color: #fff; border-radius: 12px;
font-size: 1.4rem; }
.features h2 { margin: 0 0 .25rem; font-size: 1.1rem; }
.features p { margin: 0; color: var(--muted); }
```

Project 614 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Sahara Pet Care - Features</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
What we offer	The main heading; only one per page.
<ul class="features">	Unordered (bulleted) list.
✔ <h2>F...	Second-level heading for a section.
★ <h2>Da...	A paragraph of text.
♥ <h2>Va...	One list item.

Line	What it does
✈ <h2>Do...	Generic inline container for styling.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #c2410c;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 56rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
list-style: none;	Removes bullets or numbers from a list.
display: grid;	Turns the element into a grid container.
gap: 1.5rem;	Space between grid or flex items without extra margins.

Declaration	What it does
grid-template-columns: repeat(auto-fit, minmax(20rem, 1fr));	Defines the columns of the grid.
display: flex;	Turns the element into a flex container (one-dimensional layout).
flex: 0 0 3rem;	Fixed size: never grows or shrinks.
place-items: center;	Centres items horizontally and vertically in a grid.
background: var(--brand);	Background colour or image.
border-radius: 12px;	Rounds the corners.
font-size: 1.4rem;	Size of the text.

Check your work

- Icons hidden from assistive tech
- Text does not wrap under the icon
- Two columns on desktop, one on mobile
- Headings are h2

Exercises

1. Replace the glyphs with inline SVG icons.
2. Add a hover effect on the icon box.
3. Make the icon box a circle.

Project 618 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Cleopatra Beauty Salon - Features</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
What we offer	The main heading; only one per page.
<ul class="features">	Unordered (bulleted) list.
✔ <h2>H...	Second-level heading for a section.
★ <h2>Ma...	A paragraph of text.
♥ <h2>Fa...	One list item.

Line	What it does
✈ <h2>Br...	Generic inline container for styling.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #db2777;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 56rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
list-style: none;	Removes bullets or numbers from a list.
display: grid;	Turns the element into a grid container.
gap: 1.5rem;	Space between grid or flex items without extra margins.

Declaration	What it does
grid-template-columns: repeat(auto-fit, minmax(20rem, 1fr));	Defines the columns of the grid.
display: flex;	Turns the element into a flex container (one-dimensional layout).
flex: 0 0 3rem;	Fixed size: never grows or shrinks.
place-items: center;	Centres items horizontally and vertically in a grid.
background: var(--brand);	Background colour or image.
border-radius: 12px;	Rounds the corners.
font-size: 1.4rem;	Size of the text.

Check your work

- Icons hidden from assistive tech
- Text does not wrap under the icon
- Two columns on desktop, one on mobile
- Headings are h2

Exercises

1. Replace the glyphs with inline SVG icons.
2. Add a hover effect on the icon box.
3. Make the icon box a circle.

Theme data for this project

Field	Value
Business	Cleopatra Beauty Salon
Tagline	Hair, nails and skin care
City	Dokki

Field	Value
Owner	Mariam Adel
Brand colour	#db2777
Accent colour	#fdf2f8
Offers	Haircut and blow-dry (350 EGP); Manicure (200 EGP); Facial (600 EGP); Bridal package (4500 EGP)

Project 619: Feature list with icons for Suez Auto Service

Theme: Suez Auto Service (Suez) | Level 1 | Files: index.html, styles.css

Brief

Present four features as a two-column list where each item is a media object: an icon box on the left and text on the right.

Learning goals

- Build the media object pattern with Flexbox
- Hide decorative icons from screen readers
- Use flex: 0 0 for fixed-size boxes

Elements and CSS used

HTML elements	CSS features
ul, li, span, div, h2, p	display: flex, align-items: flex-start, flex: 0 0 3rem, place-items, grid auto-fit

Build guide

1. Write the list; each li has an icon span and a div with h2 and p.
2. Add aria-hidden="true" to the icon.
3. Make li a flex row.
4. Fix the icon size with flex: 0 0 3rem and centre the glyph.
5. Grid the list into two columns when wide.
6. Check the text wraps under itself, not under the icon.

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Delta Kids Library - Features</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
What we offer	The main heading; only one per page.
<ul class="features">	Unordered (bulleted) list.
✔ <h2>S...	Second-level heading for a section.
★ <h2>Re...	A paragraph of text.
♥ <h2>Ho...	One list item.

Line	What it does
✈ <h2>Su...	Generic inline container for styling.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #ea580c;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 56rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
list-style: none;	Removes bullets or numbers from a list.
display: grid;	Turns the element into a grid container.
gap: 1.5rem;	Space between grid or flex items without extra margins.

Declaration	What it does
grid-template-columns: repeat(auto-fit, minmax(20rem, 1fr));	Defines the columns of the grid.
display: flex;	Turns the element into a flex container (one-dimensional layout).
flex: 0 0 3rem;	Fixed size: never grows or shrinks.
place-items: center;	Centres items horizontally and vertically in a grid.
background: var(--brand);	Background colour or image.
border-radius: 12px;	Rounds the corners.
font-size: 1.4rem;	Size of the text.

Check your work

- Icons hidden from assistive tech
- Text does not wrap under the icon
- Two columns on desktop, one on mobile
- Headings are h2

Exercises

1. Replace the glyphs with inline SVG icons.
2. Add a hover effect on the icon box.
3. Make the icon box a circle.

Theme data for this project

Field	Value
Business	Delta Kids Library
Tagline	Stories, reading clubs and homework help
City	Tanta

Field	Value
Owner	Ghada Kamel
Brand colour	#ea580c
Accent colour	#fff7ed

Project 623: Feature list with icons for Nubian Guest House

Theme: Nubian Guest House (Aswan) | Level 1 | Files: index.html, styles.css

Brief

Present four features as a two-column list where each item is a media object: an icon box on the left and text on the right.

Learning goals

- Build the media object pattern with Flexbox
- Hide decorative icons from screen readers
- Use flex: 0 0 for fixed-size boxes

Elements and CSS used

HTML elements	CSS features
ul, li, span, div, h2, p	display: flex, align-items: flex-start, flex: 0 0 3rem, place-items, grid auto-fit

Build guide

1. Write the list; each li has an icon span and a div with h2 and p.
2. Add aria-hidden="true" to the icon.
3. Make li a flex row.
4. Fix the icon size with flex: 0 0 3rem and centre the glyph.
5. Grid the list into two columns when wide.
6. Check the text wraps under itself, not under the icon.

Project type: Find-us page with map

Level 2 | 25 projects, one per theme

Combine an address block, an opening-hours table and an embedded map iframe in a two-column responsive layout.

Project 626: Find-us page with map for Cairo Book Shop

Theme: Cairo Book Shop (Giza) | Level 2 | Files: index.html, styles.css

Brief

Combine an address block, an opening-hours table and an embedded map iframe in a two-column responsive layout.

Learning goals

- Embed a third-party map with iframe and title
- Use address correctly
- Give the iframe a responsive aspect ratio

Elements and CSS used

HTML elements	CSS features
section, h1, address, strong, br, a, h2, table, tr, th, td, iframe	grid-template-columns: 1fr 1.4fr, aspect-ratio, border: 0, align-items: start, @media

Build guide

1. Write the info section with address and hours table.
2. Add the iframe with a descriptive title and loading="lazy".
3. Single column by default.
4. Two columns above 760px.
5. Make the map fill its column with width 100% and aspect-ratio.
6. Remove the iframe border.

Project 626 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Cairo Book Shop - Find us</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main class="find">	The unique content of this page; exactly one per page.
<section class="info">	A thematic group of content, normally with its own heading.
Find Cairo Book Shop	The main heading; only one per page.
<address>	Contact information for the page or article.
Cairo Book Shop 	Strong importance (bold by default).
+20 100 000 0000	A hyperlink; href gives the destination.
Opening hours	Second-level heading for a section.
<table>	Tabular data in rows and columns.

Line	What it does
<tr><th scope="row">Saturday - Thursday</th><td>10:00 - 22:00</td><...	A table row.
<tr><th scope="row">Friday </th><td>14:00 - 22:00</td></tr>	Header cell for a row.
<iframe class="map" src="https://www.openstreetmap.org/export/embed...	Embeds another page; title describes it for assistive technology.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #b90000;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 64rem;	Limits how wide the element can grow, keeping lines readable.

Declaration	What it does
padding: 0 1rem;	Space inside the element between its border and content.
display: grid;	Turns the element into a grid container.
gap: 2rem;	Space between grid or flex items without extra margins.
grid-template-columns: 1fr;	Defines the columns of the grid.
@media (min-width: 760px) { .find { grid-template-columns: 1fr 1.4f...	Aligns items to the start of the cross axis (no stretching).
border-collapse: collapse;	Merges adjacent table cell borders into single lines.
width: 100%;	Fills the container width.
aspect-ratio: 4 / 3;	Keeps a fixed width-to-height ratio, reserving space before media loads.
border: 0;	Changes the visual order of a flex item without changing the source.
border-radius: 12px;	Rounds the corners.

Check your work

- iframe has a title
- Address uses <address> without italic
- Map keeps its shape on resize
- Phone link works on mobile

Exercises

1. Add a 'Get directions' link to a maps URL.
2. Add a contact form under the address.
3. Use <details> for a public transport section.

Theme data for this project

Field	Value
Business	Cairo Book Shop
Tagline	PDF and printed books about web development
City	Giza
Owner	Mohamed Khattab
Brand colour	#b90000
Accent colour	#f4f1ea
Offers	Learn HTML (120 EGP); CSS in Practice (150 EGP); JavaScript Basics (180 EGP); Web Accessibility (95 EGP)

Project 627: Find-us page with map for Nile Bakery

Theme: Nile Bakery (Cairo) | Level 2 | Files: index.html, styles.css

Brief

Combine an address block, an opening-hours table and an embedded map iframe in a two-column responsive layout.

Learning goals

- Embed a third-party map with iframe and title
- Use address correctly
- Give the iframe a responsive aspect ratio

Elements and CSS used

HTML elements	CSS features
section, h1, address, strong, br, a, h2, table, tr, th, td, iframe	grid-template-columns: 1fr 1.4fr, aspect-ratio, border: 0, align-items: start, @media

Build guide

1. Write the info section with address and hours table.
2. Add the iframe with a descriptive title and loading="lazy".
3. Single column by default.
4. Two columns above 760px.
5. Make the map fill its column with width 100% and aspect-ratio.
6. Remove the iframe border.

Project 627: index.html

```
<!DOCTYPE html>
<html lang="en">

Project 630 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Red Sea Travel - Find us</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main class="find">	The unique content of this page; exactly one per page.
<section class="info">	A thematic group of content, normally with its own heading.
Find Red Sea Travel	The main heading; only one per page.
<address>	Contact information for the page or article.
Red Sea Travel 	Strong importance (bold by default).
+20 100 000 0000	A hyperlink; href gives the destination.
Opening hours	Second-level heading for a section.
<table>	Tabular data in rows and columns.

Line	What it does
<tr><th scope="row">Saturday - Thursday</th><td>10:00 - 22:00</td><...	A table row.
<tr><th scope="row">Friday </th><td>14:00 - 22:00</td></tr>	Header cell for a row.
<iframe class="map" src="https://www.openstreetmap.org/export/embed...	Embeds another page; title describes it for assistive technology.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #0369a1;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 64rem;	Limits how wide the element can grow, keeping lines readable.

Declaration	What it does
padding: 0 1rem;	Space inside the element between its border and content.
display: grid;	Turns the element into a grid container.
gap: 2rem;	Space between grid or flex items without extra margins.
grid-template-columns: 1fr;	Defines the columns of the grid.
@media (min-width: 760px) { .find { grid-template-columns: 1fr 1.4f...	Aligns items to the start of the cross axis (no stretching).
border-collapse: collapse;	Merges adjacent table cell borders into single lines.
width: 100%;	Fills the container width.
aspect-ratio: 4 / 3;	Keeps a fixed width-to-height ratio, reserving space before media loads.
border: 0;	Changes the visual order of a flex item without changing the source.
border-radius: 12px;	Rounds the corners.

Check your work

- iframe has a title
- Address uses <address> without italic
- Map keeps its shape on resize
- Phone link works on mobile

Exercises

1. Add a 'Get directions' link to a maps URL.
2. Add a contact form under the address.
3. Use <details> for a public transport section.

Theme data for this project

Field	Value
Business	Red Sea Travel
Tagline	Discover Egypt from desert to reef
City	Hurghada
Owner	Laila Mansour
Brand colour	#0369a1
Accent colour	#f0f9ff
Offers	Luxor day trip (1200 EGP); Snorkelling (700 EGP); Desert safari (900 EGP); Nile cruise (6500 EGP)

Project 631: Find-us page with map for Lotus Language School

Theme: Lotus Language School (Alexandria) | Level 2 | Files: index.html, styles.css

Brief

Combine an address block, an opening-hours table and an embedded map iframe in a two-column responsive layout.

Learning goals

- Embed a third-party map with iframe and title
- Use address correctly
- Give the iframe a responsive aspect ratio

Elements and CSS used

HTML elements	CSS features
section, h1, address, strong, br, a, h2, table, tr, th, td, iframe	grid-template-columns: 1fr 1.4fr, aspect-ratio, border: 0, align-items: start, @media

Build guide

1. Write the info section with address and hours table.
2. Add the iframe with a descriptive title and loading="lazy".
3. Single column by default.
4. Two columns above 760px.
5. Make the map fill its column with width 100% and aspect-ratio.
6. Remove the iframe border.

Project 631: index.html

```
<!DOCTYPE html>

1. Add a 'Get directions' link to a maps URL.
2. Add a contact form under the address.
3. Use <details> for a public transport section.

Theme data for this project

Field	Value
Business	Sinai Trekking Club
Tagline	Guided mountain walks for every level
City	Saint Catherine
Owner	Yara Hamdy
Brand colour	#92400e
Accent colour	#fffbeb
Offers	Mount Sinai sunrise (400 EGP); Blue Desert loop (250 EGP); Wadi Gnai (300 EGP); Three-day traverse (1900 EGP)

Project 634: Find-us page with map for Horizon Photography

Theme: Horizon Photography (Maadi) | Level 2 | Files: index.html, styles.css

Brief

Combine an address block, an opening-hours table and an embedded map iframe in a two-column responsive layout.

Learning goals

- Embed a third-party map with iframe and title
- Use address correctly
- Give the iframe a responsive aspect ratio

Elements and CSS used

HTML elements	CSS features
section, h1, address, strong, br, a, h2, table, tr, th, td, iframe	grid-template-columns: 1fr 1.4fr, aspect-ratio, border: 0, align-items: start, @media

Build guide

1. Write the info section with address and hours table.
2. Add the iframe with a descriptive title and loading="lazy".
3. Single column by default.
4. Two columns above 760px.
5. Make the map fill its column with width 100% and aspect-ratio.
6. Remove the iframe border.

Project 634: index.html

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1">
  <title>Horizon Photography - Find us</title>
  <link rel="stylesheet" href="styles.css">
</head>
<body>
  <main class="find">
    <section class="info">
      <h1>Find Horizon Photography</h1>
      <address>
        <strong>Horizon Photography</strong><br>
        12 Example Street<br>
        Maadi, Egypt<br>
        <a href="tel:+20100000000">+20 100 000 0000</a>
      </address>
      <h2>Opening hours</h2>
      <table>
        <tr><th scope="row">Saturday - Thursday</th><td>10:00 - 22:
00</td></tr>
        <tr><th scope="row">Friday</th><td>14:00 - 22:00</td></tr>
      </table>

 grid; gap: 2rem; grid-template-columns: 1fr; }
@media (min-width: 760px) { .find { grid-template-columns: 1fr 1.4fr;
align-items: start; } }
address { font-style: normal; line-height: 1.8; margin-bottom: 1.5rem;
 }
table { border-collapse: collapse; }
```

```
th, td { text-align: left; padding: .4rem .8rem .4rem 0; }
.map { width: 100%; aspect-ratio: 4 / 3; border: 0; border-radius:
12px; }
```

Project 634 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Horizon Photography - Find us</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main class="find">	The unique content of this page; exactly one per page.
<section class="info">	A thematic group of content, normally with its own heading.
Find Horizon Photography	The main heading; only one per page.
<address>	Contact information for the page or article.
Horizon Photography 	Strong importance (bold by default).
+20 100 000 0000	A hyperlink; href gives the destination.
Opening hours	Second-level heading for a section.
<table>	Tabular data in rows and columns.

Line	What it does
<tr><th scope="row">Saturday - Thursday</th><td>10:00 - 22:00</td><...	A table row.
<tr><th scope="row">Friday </th><td>14:00 - 22:00</td></tr>	Header cell for a row.
<iframe class="map" src="https://www.openstreetmap.org/export/embed...	Embeds another page; title describes it for assistive technology.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #111827;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 64rem;	Limits how wide the element can grow, keeping lines readable.

Declaration	What it does
padding: 0 1rem;	Space inside the element between its border and content.
display: grid;	Turns the element into a grid container.
gap: 2rem;	Space between grid or flex items without extra margins.
grid-template-columns: 1fr;	Defines the columns of the grid.
@media (min-width: 760px) { .find { grid-template-columns: 1fr 1.4f...	Aligns items to the start of the cross axis (no stretching).
border-collapse: collapse;	Merges adjacent table cell borders into single lines.
width: 100%;	Fills the container width.
aspect-ratio: 4 / 3;	Keeps a fixed width-to-height ratio, reserving space before media loads.
border: 0;	Changes the visual order of a flex item without changing the source.
border-radius: 12px;	Rounds the corners.

Check your work

- iframe has a title
- Address uses <address> without italic
- Map keeps its shape on resize
- Phone link works on mobile

Exercises

1. Add a 'Get directions' link to a maps URL.
2. Add a contact form under the address.
3. Use <details> for a public transport section.

Theme data for this project

Field	Value
Business	Horizon Photography
Tagline	Portraits, weddings and product photography
City	Maadi
Owner	Adham Nabil
Brand colour	#111827
Accent colour	#f3f4f6
Offers	Portrait session (1200 EGP); Wedding day (15000 EGP); Product shoot (900 EGP); Family session (1500 EGP)

<tr><th scope="row">Friday </th><td>14:00 - 22:00</td></tr>	Header cell for a row.
<iframe class="map" src="https://www.openstreetmap.org/export/embed...	Embeds another page; title describes it for assistive technology.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #78350f;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 64rem;	Limits how wide the element can grow, keeping lines readable.

Declaration	What it does
padding: 0 1rem;	Space inside the element between its border and content.
display: grid;	Turns the element into a grid container.
gap: 2rem;	Space between grid or flex items without extra margins.
grid-template-columns: 1fr;	Defines the columns of the grid.
@media (min-width: 760px) { .find { grid-template-columns: 1fr 1.4f...	Aligns items to the start of the cross axis (no stretching).
border-collapse: collapse;	Merges adjacent table cell borders into single lines.
width: 100%;	Fills the container width.
aspect-ratio: 4 / 3;	Keeps a fixed width-to-height ratio, reserving space before media loads.
border: 0;	Changes the visual order of a flex item without changing the source.
border-radius: 12px;	Rounds the corners.

Check your work

- iframe has a title
- Address uses <address> without italic
- Map keeps its shape on resize
- Phone link works on mobile

Exercises

1. Add a 'Get directions' link to a maps URL.
2. Add a contact form under the address.
3. Use <details> for a public transport section.

Theme data for this project

Field	Value
Business	Cedar Furniture
Tagline	Solid wood furniture made to order
City	Damietta
Owner	Tarek Lotfy
Brand colour	#78350f
Accent colour	#fef3c7
Offers	Oak dining table (9500 EGP); Bookshelf (4200 EGP); Bedside table (1500 EGP); Coffee table (2800 EGP)

Project 638: Find-us page with map for Byte Repair

Theme: Byte Repair (Nasr City) | Level 2 | Files: index.html, styles.css

Brief

Combine an address block, an opening-hours table and an embedded map iframe in a two-column responsive layout.

Learning goals

- Embed a third-party map with iframe and title
- Use address correctly
- Give the iframe a responsive aspect ratio

Elements and CSS used

HTML elements	CSS features
section, h1, address, strong, br, a, h2, table, tr, th, td, iframe	grid-template-columns: 1fr 1.4fr, aspect-ratio, border: 0, align-items: start, @media

Build guide

1. Write the info section with address and hours table.
2. Add the iframe with a descriptive title and loading="lazy".
3. Single column by default.
4. Two columns above 760px.
5. Make the map fill its column with width 100% and aspect-ratio.
6. Remove the iframe border.

Project 638: index.html

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1">

Project 641 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Habiba Handmade Jewellery - Find us</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main class="find">	The unique content of this page; exactly one per page.
<section class="info">	A thematic group of content, normally with its own heading.
Find Habiba Handmade Jewellery	The main heading; only one per page.
<address>	Contact information for the page or article.
Habiba Handmade Jewellery 	Strong importance (bold by default).
+20 100 000 0000	A hyperlink; href gives the destination.
Opening hours	Second-level heading for a section.
<table>	Tabular data in rows and columns.

Line	What it does
<tr><th scope="row">Saturday - Thursday</th><td>10:00 - 22:00</td><...	A table row.
<tr><th scope="row">Friday </th><td>14:00 - 22:00</td></tr>	Header cell for a row.
<iframe class="map" src="https://www.openstreetmap.org/export/embed...	Embeds another page; title describes it for assistive technology.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #a16207;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 64rem;	Limits how wide the element can grow, keeping lines readable.

Declaration	What it does
padding: 0 1rem;	Space inside the element between its border and content.
display: grid;	Turns the element into a grid container.
gap: 2rem;	Space between grid or flex items without extra margins.
grid-template-columns: 1fr;	Defines the columns of the grid.
@media (min-width: 760px) { .find { grid-template-columns: 1fr 1.4f...	Aligns items to the start of the cross axis (no stretching).
border-collapse: collapse;	Merges adjacent table cell borders into single lines.
width: 100%;	Fills the container width.
aspect-ratio: 4 / 3;	Keeps a fixed width-to-height ratio, reserving space before media loads.
border: 0;	Changes the visual order of a flex item without changing the source.
border-radius: 12px;	Rounds the corners.

Check your work

- iframe has a title
- Address uses <address> without italic
- Map keeps its shape on resize
- Phone link works on mobile

Exercises

1. Add a 'Get directions' link to a maps URL.
2. Add a contact form under the address.
3. Use <details> for a public transport section.

Theme data for this project

Field	Value
Business	Habiba Handmade Jewellery
Tagline	Silver and brass pieces inspired by Nubia
City	Aswan
Owner	Habiba Saleh
Brand colour	#a16207
Accent colour	#fefce8
Offers	Lotus pendant (650 EGP); Brass cuff (420 EGP); Bead earrings (180 EGP); Ankh ring (300 EGP)

Project 642: Find-us page with map for Fayoum Pottery Studio

Theme: Fayoum Pottery Studio (Tunis Village) | Level 2 | Files: index.html, styles.css

Brief

Combine an address block, an opening-hours table and an embedded map iframe in a two-column responsive layout.

Learning goals

- Embed a third-party map with iframe and title
- Use address correctly
- Give the iframe a responsive aspect ratio

Elements and CSS used

HTML elements	CSS features
section, h1, address, strong, br, a, h2, table, tr, th, td, iframe	grid-template-columns: 1fr 1.4fr, aspect-ratio, border: 0, align-items: start, @media

Build guide

1. Write the info section with address and hours table.
2. Add the iframe with a descriptive title and loading="lazy".
3. Single column by default.
4. Two columns above 760px.
5. Make the map fill its column with width 100% and aspect-ratio.
6. Remove the iframe border.

Project 642: index.html

```
<!DOCTYPE html>

Project 645 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Luxor Music Academy - Find us</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main class="find">	The unique content of this page; exactly one per page.
<section class="info">	A thematic group of content, normally with its own heading.
Find Luxor Music Academy	The main heading; only one per page.
<address>	Contact information for the page or article.
Luxor Music Academy 	Strong importance (bold by default).
+20 100 000 0000	A hyperlink; href gives the destination.
Opening hours	Second-level heading for a section.
<table>	Tabular data in rows and columns.

Line	What it does
<tr><th scope="row">Saturday - Thursday</th><td>10:00 - 22:00</td><...	A table row.
<tr><th scope="row">Friday </th><td>14:00 - 22:00</td></tr>	Header cell for a row.
<iframe class="map" src="https://www.openstreetmap.org/export/embed...	Embeds another page; title describes it for assistive technology.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #4c1d95;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 64rem;	Limits how wide the element can grow, keeping lines readable.

Declaration	What it does
padding: 0 1rem;	Space inside the element between its border and content.
display: grid;	Turns the element into a grid container.
gap: 2rem;	Space between grid or flex items without extra margins.
grid-template-columns: 1fr;	Defines the columns of the grid.
@media (min-width: 760px) { .find { grid-template-columns: 1fr 1.4f...	Aligns items to the start of the cross axis (no stretching).
border-collapse: collapse;	Merges adjacent table cell borders into single lines.
width: 100%;	Fills the container width.
aspect-ratio: 4 / 3;	Keeps a fixed width-to-height ratio, reserving space before media loads.
border: 0;	Changes the visual order of a flex item without changing the source.
border-radius: 12px;	Rounds the corners.

Check your work

- iframe has a title
- Address uses <address> without italic
- Map keeps its shape on resize
- Phone link works on mobile

Exercises

1. Add a 'Get directions' link to a maps URL.
2. Add a contact form under the address.
3. Use <details> for a public transport section.

Theme data for this project

Field	Value
Business	Luxor Music Academy
Tagline	Oud, piano, guitar and voice lessons
City	Luxor
Owner	Salma Ragab
Brand colour	#4c1d95
Accent colour	#f5f3ff
Offers	Oud for beginners (1600 EGP); Piano grade 1 (1800 EGP); Guitar chords (1400 EGP); Voice coaching (1500 EGP)

Project 646: Find-us page with map for Port Said Seafood

Theme: Port Said Seafood (Port Said) | Level 2 | Files: index.html, styles.css

Brief

Combine an address block, an opening-hours table and an embedded map iframe in a two-column responsive layout.

Learning goals

- Embed a third-party map with iframe and title
- Use address correctly
- Give the iframe a responsive aspect ratio

Elements and CSS used

HTML elements	CSS features
section, h1, address, strong, br, a, h2, table, tr, th, td, iframe	grid-template-columns: 1fr 1.4fr, aspect-ratio, border: 0, align-items: start, @media

Build guide

1. Write the info section with address and hours table.
2. Add the iframe with a descriptive title and loading="lazy".
3. Single column by default.
4. Two columns above 760px.
5. Make the map fill its column with width 100% and aspect-ratio.
6. Remove the iframe border.

Project 646: index.html

```
<!DOCTYPE html>
<html lang="en">

padding: 0 1rem;	Space inside the element between its border and content.
display: grid;	Turns the element into a grid container.
gap: 2rem;	Space between grid or flex items without extra margins.
grid-template-columns: 1fr;	Defines the columns of the grid.
@media (min-width: 760px) { .find { grid-template-columns: 1fr 1.4f...	Aligns items to the start of the cross axis (no stretching).
border-collapse: collapse;	Merges adjacent table cell borders into single lines.
width: 100%;	Fills the container width.
aspect-ratio: 4 / 3;	Keeps a fixed width-to-height ratio, reserving space before media loads.
border: 0;	Changes the visual order of a flex item without changing the source.
border-radius: 12px;	Rounds the corners.

Check your work

- iframe has a title
- Address uses <address> without italic
- Map keeps its shape on resize
- Phone link works on mobile

Exercises

1. Add a 'Get directions' link to a maps URL.
2. Add a contact form under the address.
3. Use <details> for a public transport section.

Theme data for this project

Field	Value
Business	Nubian Guest House
Tagline	Colourful rooms on the west bank of the Nile
City	Aswan
Owner	Fatma Hassan
Brand colour	#b45309
Accent colour	#fffbeb
Offers	Garden room (900 EGP); Nile view suite (1800 EGP); Family room (1500 EGP); Rooftop dorm (300 EGP)

Project 649: Find-us page with map for Ismailia Cycling Store

Theme: Ismailia Cycling Store (Ismailia) | Level 2 | Files: index.html, styles.css

Brief

Combine an address block, an opening-hours table and an embedded map iframe in a two-column responsive layout.

Learning goals

- Embed a third-party map with iframe and title
- Use address correctly
- Give the iframe a responsive aspect ratio

Elements and CSS used

HTML elements	CSS features
section, h1, address, strong, br, a, h2, table, tr, th, td, iframe	grid-template-columns: 1fr 1.4fr, aspect-ratio, border: 0, align-items: start, @media

Build guide

1. Write the info section with address and hours table.
2. Add the iframe with a descriptive title and loading="lazy".
3. Single column by default.
4. Two columns above 760px.
5. Make the map fill its column with width 100% and aspect-ratio.
6. Remove the iframe border.

Project 649: index.html

```
<!DOCTYPE html>

Project 649 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Ismailia Cycling Store - Find us</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main class="find">	The unique content of this page; exactly one per page.
<section class="info">	A thematic group of content, normally with its own heading.
Find Ismailia Cycling Store	The main heading; only one per page.
<address>	Contact information for the page or article.
Ismailia Cycling Store 	Strong importance (bold by default).
+20 100 000 0000	A hyperlink; href gives the destination.
Opening hours	Second-level heading for a section.
<table>	Tabular data in rows and columns.

Line	What it does
<tr><th scope="row">Saturday - Thursday</th><td>10:00 - 22:00</td><...	A table row.
<tr><th scope="row">Friday </th><td>14:00 - 22:00</td></tr>	Header cell for a row.
<iframe class="map" src="https://www.openstreetmap.org/export/embed...	Embeds another page; title describes it for assistive technology.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #dc2626;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 64rem;	Limits how wide the element can grow, keeping lines readable.

Declaration	What it does
padding: 0 1rem;	Space inside the element between its border and content.
display: grid;	Turns the element into a grid container.
gap: 2rem;	Space between grid or flex items without extra margins.
grid-template-columns: 1fr;	Defines the columns of the grid.
@media (min-width: 760px) { .find { grid-template-columns: 1fr 1.4f...	Aligns items to the start of the cross axis (no stretching).
border-collapse: collapse;	Merges adjacent table cell borders into single lines.
width: 100%;	Fills the container width.
aspect-ratio: 4 / 3;	Keeps a fixed width-to-height ratio, reserving space before media loads.
border: 0;	Changes the visual order of a flex item without changing the source.
border-radius: 12px;	Rounds the corners.

Check your work

- iframe has a title

Project type: CSS-only tabs

Level 3 | 25 projects, one per theme

Build a tabbed interface without JavaScript using hidden radio buttons, labels as tabs and the :checked ~ sibling selector to show panels.

Project 651: CSS-only tabs for Cairo Book Shop

Theme: Cairo Book Shop (Giza) | Level 3 | Files: index.html, styles.css

Brief

Build a tabbed interface without JavaScript using hidden radio buttons, labels as tabs and the :checked ~ sibling selector to show panels.

Learning goals

- Use the :checked pseudo-class with the general sibling combinator
- Style labels as tabs
- Understand the limits of CSS-only widgets

Elements and CSS used

HTML elements	CSS features
input type=radio, label, div, section, h2, p	:checked, ~ combinator, attribute selector, display: none/block, opacity: 0 hiding

Build guide

1. Put three radio inputs with the same name first inside .tabs.
2. Add a .tablist of labels pointing at the radios.
3. Add three panels.
4. Hide the radios visually but keep them focusable.
5. Show the panel matching the checked radio with :checked ~ .panels #pN.
6. Highlight the active label the same way.

Project 651: index.html

```
<!DOCTYPE html>

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #b90000;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 40rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.

Declaration	What it does
position: absolute;	Removes the element from flow and positions it relative to the nearest positioned ancestor.
opacity: 0;	Transparency from 0 (invisible) to 1 (solid).
pointer-events: none;	The element ignores mouse clicks.
display: flex;	Turns the element into a flex container (one-dimensional layout).
border-bottom: 2px solid var(--line);	A bottom border used as a separator line.
cursor: pointer;	Shows the hand cursor to indicate something clickable.
border-bottom: 3px solid transparent;	The line around the element: width, style and colour.
.tabs > input:focus-visible + .tablist label {	Applies when the element is focused by keyboard; keeps focus rings visible.
display: none;	Removes the element from rendering completely.
#t0:checked ~ .tablist label[for="t0"], #t1:checked ~ .tablist labe...	Applies to a checked radio or checkbox; combined with ~ it drives CSS-only widgets.
font-weight: 600;	Thickness of the text.
#t0:checked ~ .panels #p0, #t1:checked ~ .panels #p1, #t2:checked ~...	General sibling combinator: later siblings of the matched element.
display: block;	Element starts on a new line and fills the width (used on links and images).

Check your work

- Arrow keys switch tabs (radio behaviour)
- First tab open by default

- Only one panel visible
- Radios are before the labels and panels in the source

Exercises

1. Add a fourth tab.
2. Add a slide-in animation on the active panel.
3. Rebuild it with buttons and JavaScript plus role=tablist for full accessibility.

Project 652 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Nile Bakery - Compare</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main class="tabs">	The unique content of this page; exactly one per page.
<input type="radio" name="tab" id="t0" checked>	Radio button: one choice from a group sharing the same name.
<input type="radio" name="tab" id="t1">	A form control; its type decides what it looks like.
<label for="t0">Sourdough loaf</label><label f...	Text label for a control; for matches the control's id, or the label wraps the control.
	Generic block container for grouping and layout.
<section class="panel" id="p0"><h2>Sourdough loaf</h2><p>Slow ferme...	A thematic group of content, normally with its own heading.

Line	What it does
<section class="panel" id="p1"><h2>Croissant</h2><p>Butter, 27 laye...	Second-level heading for a section.
<section class="panel" id="p2"><h2>Date cookies</h2><p>Traditional ...	A paragraph of text.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #a0522d;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 40rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.

Declaration	What it does
position: absolute;	Removes the element from flow and positions it relative to the nearest positioned ancestor.
opacity: 0;	Transparency from 0 (invisible) to 1 (solid).
pointer-events: none;	The element ignores mouse clicks.
display: flex;	Turns the element into a flex container (one-dimensional layout).
border-bottom: 2px solid var(--line);	A bottom border used as a separator line.
cursor: pointer;	Shows the hand cursor to indicate something clickable.
border-bottom: 3px solid transparent;	The line around the element: width, style and colour.
.tabs > input:focus-visible + .tablist label {	Applies when the element is focused by keyboard; keeps focus rings visible.
display: none;	Removes the element from rendering completely.
#t0:checked ~ .tablist label[for="t0"], #t1:checked ~ .tablist labe...	Applies to a checked radio or checkbox; combined with ~ it drives CSS-only widgets.
font-weight: 600;	Thickness of the text.
#t0:checked ~ .panels #p0, #t1:checked ~ .panels #p1, #t2:checked ~...	General sibling combinator: later siblings of the matched element.
display: block;	Element starts on a new line and fills the width (used on links and images).

Check your work

- Arrow keys switch tabs (radio behaviour)
- First tab open by default

- Only one panel visible
- Radios are before the labels and panels in the source

Exercises

1. Add a fourth tab.
2. Add a slide-in animation on the active panel.
3. Rebuild it with buttons and JavaScript plus role=tablist for full accessibility.

Theme data for this project

Field	Value
Business	Nile Bakery
Tagline	Fresh bread and pastries every morning
City	Cairo
Owner	Sara Adel
Brand colour	#a0522d
Accent colour	#fff6ec
Offers	Sourdough loaf (60 EGP); Croissant (35 EGP); Date cookies (80 EGP); Baklava box (220 EGP)

Project 653: CSS-only tabs for Pyramid Fitness

Theme: Pyramid Fitness (6th of October) | Level 3 | Files: index.html, styles.css

Brief

Build a tabbed interface without JavaScript using hidden radio buttons, labels as tabs and the :checked ~ sibling selector to show panels.

Learning goals

- Use the :checked pseudo-class with the general sibling combinator
- Style labels as tabs
- Understand the limits of CSS-only widgets

Elements and CSS used

HTML elements	CSS features
input type=radio, label, div, section, h2, p	:checked, ~ combinator, attribute selector, display: none/block, opacity: 0 hiding

Build guide

1. Put three radio inputs with the same name first inside .tabs.
2. Add a .tablist of labels pointing at the radios.
3. Add three panels.
4. Hide the radios visually but keep them focusable.
5. Show the panel matching the checked radio with :checked ~ .panels #pN.

6. Highlight the active label the same way.
