The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #1d4ed8;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 40rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.

Declaration	What it does
position: absolute;	Removes the element from flow and positions it relative to the nearest positioned ancestor.
opacity: 0;	Transparency from 0 (invisible) to 1 (solid).
pointer-events: none;	The element ignores mouse clicks.
display: flex;	Turns the element into a flex container (one-dimensional layout).
border-bottom: 2px solid var(--line);	A bottom border used as a separator line.
cursor: pointer;	Shows the hand cursor to indicate something clickable.
border-bottom: 3px solid transparent;	The line around the element: width, style and colour.
.tabs > input:focus-visible + .tablist label {	Applies when the element is focused by keyboard; keeps focus rings visible.
display: none;	Removes the element from rendering completely.
#t0:checked ~ .tablist label[for="t0"], #t1:checked ~ .tablist labe...	Applies to a checked radio or checkbox; combined with ~ it drives CSS-only widgets.
font-weight: 600;	Thickness of the text.
#t0:checked ~ .panels #p0, #t1:checked ~ .panels #p1, #t2:checked ~...	General sibling combinator: later siblings of the matched element.
display: block;	Element starts on a new line and fills the width (used on links and images).

Check your work

- Arrow keys switch tabs (radio behaviour)
- First tab open by default

- Only one panel visible
- Radios are before the labels and panels in the source

Exercises

1. Add a fourth tab.
2. Add a slide-in animation on the active panel.
3. Rebuild it with buttons and JavaScript plus role=tablist for full accessibility.

Theme data for this project

Field	Value
Business	Delta Dental Clinic

City	Mansoura
Owner	Dr. Hana Youssef
Brand colour	#1d4ed8
Accent colour	#eff6ff
Offers	Check-up (300 EGP); Whitening (1500 EGP); Filling (600 EGP); Braces consultation (Free)

Project 655: CSS-only tabs for Red Sea Travel

Theme: Red Sea Travel (Hurghada) | Level 3 | Files: index.html, styles.css

Brief

Build a tabbed interface without JavaScript using hidden radio buttons, labels as tabs and the :checked ~ sibling selector to show panels.

Learning goals

- Use the :checked pseudo-class with the general sibling combinator
- Style labels as tabs
- Understand the limits of CSS-only widgets

Elements and CSS used

HTML elements	CSS features
input type=radio, label, div, section, h2, p	:checked, ~ combinator, attribute selector, display: none/block, opacity: 0 hiding

Build guide

1. Put three radio inputs with the same name first inside .tabs.
2. Add a .tablist of labels pointing at the radios.
3. Add three panels.
4. Hide the radios visually but keep them focusable.
5. Show the panel matching the checked radio with :checked ~ .panels #pN.
6. Highlight the active label the same way.

Project 655: index.html

```

Project 658 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Sinai Trekking Club - Compare</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main class="tabs">	The unique content of this page; exactly one per page.
<input type="radio" name="tab" id="t0" checked>	Radio button: one choice from a group sharing the same name.
<input type="radio" name="tab" id="t1">	A form control; its type decides what it looks like.
<label for="t0">Mount Sinai sunrise</label><la...	Text label for a control; for matches the control's id, or the label wraps the control.
	Generic block container for grouping and layout.
<section class="panel" id="p0"><h2>Mount Sinai sunrise</h2><p>Night...	A thematic group of content, normally with its own heading.

Line	What it does
<section class="panel" id="p1"><h2>Blue Desert loop</h2><p>Easy day...	Second-level heading for a section.
<section class="panel" id="p2"><h2>Wadi Gnai</h2><p>Palms and pools...	A paragraph of text.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #92400e;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 40rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.

Declaration	What it does
position: absolute;	Removes the element from flow and positions it relative to the nearest positioned ancestor.
opacity: 0;	Transparency from 0 (invisible) to 1 (solid).
pointer-events: none;	The element ignores mouse clicks.
display: flex;	Turns the element into a flex container (one-dimensional layout).
border-bottom: 2px solid var(--line);	A bottom border used as a separator line.
cursor: pointer;	Shows the hand cursor to indicate something clickable.
border-bottom: 3px solid transparent;	The line around the element: width, style and colour.
.tabs > input:focus-visible + .tablist label {	Applies when the element is focused by keyboard; keeps focus rings visible.
display: none;	Removes the element from rendering completely.
#t0:checked ~ .tablist label[for="t0"], #t1:checked ~ .tablist labe...	Applies to a checked radio or checkbox; combined with ~ it drives CSS-only widgets.
font-weight: 600;	Thickness of the text.
#t0:checked ~ .panels #p0, #t1:checked ~ .panels #p1, #t2:checked ~...	General sibling combinator: later siblings of the matched element.
display: block;	Element starts on a new line and fills the width (used on links and images).

Check your work

- Arrow keys switch tabs (radio behaviour)
- First tab open by default

- Only one panel visible
- Radios are before the labels and panels in the source

Exercises

1. Add a fourth tab.
2. Add a slide-in animation on the active panel.
3. Rebuild it with buttons and JavaScript plus role=tablist for full accessibility.

Theme data for this project

Field	Value
Business	Sinai Trekking Club
Tagline	Guided mountain walks for every level
City	Saint Catherine
Owner	Yara Hamdy
Brand colour	#92400e
Accent colour	#fffbeb
Offers	Mount Sinai sunrise (400 EGP); Blue Desert loop (250 EGP); Wadi Gnai (300 EGP); Three-day traverse (1900 EGP)

Project 659: CSS-only tabs for Horizon Photography

Theme: Horizon Photography (Maadi) | Level 3 | Files: index.html, styles.css

Brief

Build a tabbed interface without JavaScript using hidden radio buttons, labels as tabs and the :checked ~ sibling selector to show panels.

Learning goals

- Use the :checked pseudo-class with the general sibling combinator
- Style labels as tabs
- Understand the limits of CSS-only widgets

Elements and CSS used

HTML elements	CSS features
input type=radio, label, div, section, h2, p	:checked, ~ combinator, attribute selector, display: none/block, opacity: 0 hiding

Build guide

1. Put three radio inputs with the same name first inside .tabs.
2. Add a .tablist of labels pointing at the radios.
3. Add three panels.
4. Hide the radios visually but keep them focusable.
5. Show the panel matching the checked radio with :checked ~ .panels #pN.
6. Highlight the active label the same way.

Project 659: index.html

box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #15803d;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 40rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.

Declaration	What it does
position: absolute;	Removes the element from flow and positions it relative to the nearest positioned ancestor.
opacity: 0;	Transparency from 0 (invisible) to 1 (solid).
pointer-events: none;	The element ignores mouse clicks.
display: flex;	Turns the element into a flex container (one-dimensional layout).
border-bottom: 2px solid var(--line);	A bottom border used as a separator line.
cursor: pointer;	Shows the hand cursor to indicate something clickable.
border-bottom: 3px solid transparent;	The line around the element: width, style and colour.
.tabs > input:focus-visible + .tablist label {	Applies when the element is focused by keyboard; keeps focus rings visible.
display: none;	Removes the element from rendering completely.
#t0:checked ~ .tablist label[for="t0"], #t1:checked ~ .tablist labe...	Applies to a checked radio or checkbox; combined with ~ it drives CSS-only widgets.
font-weight: 600;	Thickness of the text.
#t0:checked ~ .panels #p0, #t1:checked ~ .panels #p1, #t2:checked ~...	General sibling combinator: later siblings of the matched element.
display: block;	Element starts on a new line and fills the width (used on links and images).

Check your work

- Arrow keys switch tabs (radio behaviour)
- First tab open by default

- Only one panel visible
- Radios are before the labels and panels in the source

Exercises

1. Add a fourth tab.
2. Add a slide-in animation on the active panel.
3. Rebuild it with buttons and JavaScript plus role=tablist for full accessibility.

Theme data for this project

Field	Value
Business	Oasis Plant Nursery
Tagline	Indoor plants and gardening advice
City	Sheikh Zayed
Owner	Hossam Ali
Brand colour	#15803d
Accent colour	#f7fee7
Offers	Monstera (250 EGP); Snake plant (120 EGP); Basil pot (45 EGP); Olive tree (600 EGP)

Project 662: CSS-only tabs for Cedar Furniture

Theme: Cedar Furniture (Damietta) | Level 3 | Files: index.html, styles.css

Brief

Build a tabbed interface without JavaScript using hidden radio buttons, labels as tabs and the :checked ~ sibling selector to show panels.

Learning goals

- Use the :checked pseudo-class with the general sibling combinator
- Style labels as tabs
- Understand the limits of CSS-only widgets

Elements and CSS used

HTML elements	CSS features
input type=radio, label, div, section, h2, p	:checked, ~ combinator, attribute selector, display: none/block, opacity: 0 hiding

Build guide

1. Put three radio inputs with the same name first inside .tabs.
2. Add a .tablist of labels pointing at the radios.
3. Add three panels.
4. Hide the radios visually but keep them focusable.
5. Show the panel matching the checked radio with :checked ~ .panels #pN.
6. Highlight the active label the same way.

Project 662: index.html

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Alexandria Sailing School - Compare</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main class="tabs">	The unique content of this page; exactly one per page.
<input type="radio" name="tab" id="t0" checked>	Radio button: one choice from a group sharing the same name.
<input type="radio" name="tab" id="t1">	A form control; its type decides what it looks like.
<label for="t0">Taster session</label><label f...	Text label for a control; for matches the control's id, or the label wraps the control.
	Generic block container for grouping and layout.
<section class="panel" id="p0"><h2>Taster session</h2><p>Two hours ...	A thematic group of content, normally with its own heading.

Line	What it does
<section class="panel" id="p1"><h2>Beginner course</h2><p>Five sess...	Second-level heading for a section.
<section class="panel" id="p2"><h2>Racing clinic</h2><p>Tactics and...	A paragraph of text.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #1e40af;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 40rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.

Declaration	What it does
position: absolute;	Removes the element from flow and positions it relative to the nearest positioned ancestor.
opacity: 0;	Transparency from 0 (invisible) to 1 (solid).
pointer-events: none;	The element ignores mouse clicks.
display: flex;	Turns the element into a flex container (one-dimensional layout).
border-bottom: 2px solid var(--line);	A bottom border used as a separator line.
cursor: pointer;	Shows the hand cursor to indicate something clickable.
border-bottom: 3px solid transparent;	The line around the element: width, style and colour.
.tabs > input:focus-visible + .tablist label {	Applies when the element is focused by keyboard; keeps focus rings visible.
display: none;	Removes the element from rendering completely.
#t0:checked ~ .tablist label[for="t0"], #t1:checked ~ .tablist labe...	Applies to a checked radio or checkbox; combined with ~ it drives CSS-only widgets.
font-weight: 600;	Thickness of the text.
#t0:checked ~ .panels #p0, #t1:checked ~ .panels #p1, #t2:checked ~...	General sibling combinator: later siblings of the matched element.
display: block;	Element starts on a new line and fills the width (used on links and images).

Check your work

- Arrow keys switch tabs (radio behaviour)
- First tab open by default

- Only one panel visible
- Radios are before the labels and panels in the source

Exercises

1. Add a fourth tab.
2. Add a slide-in animation on the active panel.
3. Rebuild it with buttons and JavaScript plus role=tablist for full accessibility.

Theme data for this project

Business	Alexandria Sailing School
Tagline	Learn to sail on the Mediterranean
City	Alexandria
Owner	Amr Selim
Brand colour	#1e40af
Accent colour	#eff6ff
Offers	Taster session (500 EGP); Beginner course (2200 EGP); Racing clinic (1800 EGP); Private lesson (900 EGP)

Project 666: CSS-only tabs for Habiba Handmade Jewellery

Theme: Habiba Handmade Jewellery (Aswan) | Level 3 | Files: index.html, styles.css

Brief

Build a tabbed interface without JavaScript using hidden radio buttons, labels as tabs and the :checked ~ sibling selector to show panels.

Learning goals

- Use the :checked pseudo-class with the general sibling combinator
- Style labels as tabs
- Understand the limits of CSS-only widgets

Elements and CSS used

HTML elements	CSS features
input type=radio, label, div, section, h2, p	:checked, ~ combinator, attribute selector, display: none/block, opacity: 0 hiding

Build guide

1. Put three radio inputs with the same name first inside .tabs.
2. Add a .tablist of labels pointing at the radios.
3. Add three panels.
4. Hide the radios visually but keep them focusable.
5. Show the panel matching the checked radio with :checked ~ .panels #pN.

6. Highlight the active label the same way.

Project 666: index.html

```

line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 40rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.

Declaration	What it does
position: absolute;	Removes the element from flow and positions it relative to the nearest positioned ancestor.
opacity: 0;	Transparency from 0 (invisible) to 1 (solid).
pointer-events: none;	The element ignores mouse clicks.
display: flex;	Turns the element into a flex container (one-dimensional layout).
border-bottom: 2px solid var(--line);	A bottom border used as a separator line.
cursor: pointer;	Shows the hand cursor to indicate something clickable.
border-bottom: 3px solid transparent;	The line around the element: width, style and colour.
.tabs > input:focus-visible + .tablist label {	Applies when the element is focused by keyboard; keeps focus rings visible.
display: none;	Removes the element from rendering completely.
#t0:checked ~ .tablist label[for="t0"], #t1:checked ~ .tablist labe...	Applies to a checked radio or checkbox; combined with ~ it drives CSS-only widgets.
font-weight: 600;	Thickness of the text.
#t0:checked ~ .panels #p0, #t1:checked ~ .panels #p1, #t2:checked ~...	General sibling combinator: later siblings of the matched element.
display: block;	Element starts on a new line and fills the width (used on links and images).

Check your work

- Arrow keys switch tabs (radio behaviour)
- First tab open by default

- Only one panel visible
- Radios are before the labels and panels in the source

Exercises

1. Add a fourth tab.
2. Add a slide-in animation on the active panel.
3. Rebuild it with buttons and JavaScript plus role=tablist for full accessibility.

Theme data for this project

Field	Value
Business	Cleopatra Beauty Salon
Tagline	Hair, nails and skin care
City	Dokki
Owner	Mariam Adel
Brand colour	#db2777
Accent colour	#fdf2f8
Offers	Haircut and blow-dry (350 EGP); Manicure (200 EGP); Facial (600 EGP); Bridal package (4500 EGP)

Project 669: CSS-only tabs for Suez Auto Service

Theme: Suez Auto Service (Suez) | Level 3 | Files: index.html, styles.css

Brief

Build a tabbed interface without JavaScript using hidden radio buttons, labels as tabs and the :checked ~ sibling selector to show panels.

Learning goals

- Use the :checked pseudo-class with the general sibling combinator
- Style labels as tabs
- Understand the limits of CSS-only widgets

Elements and CSS used

HTML elements	CSS features
input type=radio, label, div, section, h2, p	:checked, ~ combinator, attribute selector, display: none/block, opacity: 0 hiding

Build guide

1. Put three radio inputs with the same name first inside .tabs.
2. Add a .tablist of labels pointing at the radios.
3. Add three panels.
4. Hide the radios visually but keep them focusable.
5. Show the panel matching the checked radio with :checked ~ .panels #pN.
6. Highlight the active label the same way.

Project 669: index.html

Project 672 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Delta Kids Library - Compare</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main class="tabs">	The unique content of this page; exactly one per page.
<input type="radio" name="tab" id="t0" checked>	Radio button: one choice from a group sharing the same name.
<input type="radio" name="tab" id="t1">	A form control; its type decides what it looks like.
<label for="t0">Story hour</label><label for="...	Text label for a control; for matches the control's id, or the label wraps the control.
	Generic block container for grouping and layout.
<section class="panel" id="p0"><h2>Story hour</h2><p>Ages 3 to 6, S...	A thematic group of content, normally with its own heading.

Line	What it does
<section class="panel" id="p1"><h2>Reading club</h2><p>Ages 7 to 11...	Second-level heading for a section.
<section class="panel" id="p2"><h2>Homework help</h2><p>Weekday aft...	A paragraph of text.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #ea580c;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 40rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.

Declaration	What it does
position: absolute;	Removes the element from flow and positions it relative to the nearest positioned ancestor.
opacity: 0;	Transparency from 0 (invisible) to 1 (solid).
pointer-events: none;	The element ignores mouse clicks.
display: flex;	Turns the element into a flex container (one-dimensional layout).
border-bottom: 2px solid var(--line);	A bottom border used as a separator line.
cursor: pointer;	Shows the hand cursor to indicate something clickable.
border-bottom: 3px solid transparent;	The line around the element: width, style and colour.
.tabs > input:focus-visible + .tablist label {	Applies when the element is focused by keyboard; keeps focus rings visible.
display: none;	Removes the element from rendering completely.
#t0:checked ~ .tablist label[for="t0"], #t1:checked ~ .tablist labe...	Applies to a checked radio or checkbox; combined with ~ it drives CSS-only widgets.
font-weight: 600;	Thickness of the text.
#t0:checked ~ .panels #p0, #t1:checked ~ .panels #p1, #t2:checked ~...	General sibling combinator: later siblings of the matched element.
display: block;	Element starts on a new line and fills the width (used on links and images).

Check your work

- Arrow keys switch tabs (radio behaviour)
- First tab open by default

- Only one panel visible
- Radios are before the labels and panels in the source

Exercises

1. Add a fourth tab.
2. Add a slide-in animation on the active panel.
3. Rebuild it with buttons and JavaScript plus role=tablist for full accessibility.

Theme data for this project

Field	Value
Business	Delta Kids Library
Tagline	Stories, reading clubs and homework help
City	Tanta
Owner	Ghada Kamel
Brand colour	#ea580c
Accent colour	#fff7ed
Offers	Story hour (Free); Reading club (50 EGP per month); Homework help (Free); Summer challenge (Free)

Project 673: CSS-only tabs for Nubian Guest House

Theme: Nubian Guest House (Aswan) | Level 3 | Files: index.html, styles.css

Brief

Build a tabbed interface without JavaScript using hidden radio buttons, labels as tabs and the :checked ~ sibling selector to show panels.

Learning goals

- Use the :checked pseudo-class with the general sibling combinator
- Style labels as tabs
- Understand the limits of CSS-only widgets

Elements and CSS used

HTML elements	CSS features
input type=radio, label, div, section, h2, p	:checked, ~ combinator, attribute selector, display: none/block, opacity: 0 hiding

Build guide

1. Put three radio inputs with the same name first inside .tabs.
2. Add a .tablist of labels pointing at the radios.
3. Add three panels.
4. Hide the radios visually but keep them focusable.
5. Show the panel matching the checked radio with :checked ~ .panels #pN.
6. Highlight the active label the same way.

color: var(--ink);	Text colour.
max-width: 40rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.

Declaration	What it does
position: absolute;	Removes the element from flow and positions it relative to the nearest positioned ancestor.
opacity: 0;	Transparency from 0 (invisible) to 1 (solid).
pointer-events: none;	The element ignores mouse clicks.
display: flex;	Turns the element into a flex container (one-dimensional layout).
border-bottom: 2px solid var(--line);	A bottom border used as a separator line.
cursor: pointer;	Shows the hand cursor to indicate something clickable.
border-bottom: 3px solid transparent;	The line around the element: width, style and colour.
.tabs > input:focus-visible + .tablist label {	Applies when the element is focused by keyboard; keeps focus rings visible.
display: none;	Removes the element from rendering completely.
#t0:checked ~ .tablist label[for="t0"], #t1:checked ~ .tablist labe...	Applies to a checked radio or checkbox; combined with ~ it drives CSS-only widgets.
font-weight: 600;	Thickness of the text.
#t0:checked ~ .panels #p0, #t1:checked ~ .panels #p1, #t2:checked ~...	General sibling combinator: later siblings of the matched element.
display: block;	Element starts on a new line and fills the width (used on links and images).

Check your work

- Arrow keys switch tabs (radio behaviour)
- First tab open by default

- Only one panel visible
- Radios are before the labels and panels in the source

Exercises

1. Add a fourth tab.
2. Add a slide-in animation on the active panel.
3. Rebuild it with buttons and JavaScript plus role=tablist for full accessibility.

Theme data for this project

Field	Value
Business	Minya Coding Club
Tagline	Free weekend coding for teenagers
City	Minya
Owner	Youssef Hany
Brand colour	#2563eb
Accent colour	#eff6ff
Offers	HTML weekend (Free); CSS art (Free); Scratch games (Free); Hackathon (Free)

Project type: Modal dialog

Level 3 | 25 projects, one per theme

Show a promotional pop-up using the native dialog element, opened with two lines of JavaScript, closed by a form with method=dialog, with a blurred backdrop.

Project 676: Modal dialog for Cairo Book Shop

Theme: Cairo Book Shop (Giza) | Level 3 | Files: index.html, styles.css

Brief

Show a promotional pop-up using the native dialog element, opened with two lines of JavaScript, closed by a form with method=dialog, with a blurred backdrop.

Learning goals

- Use <dialog> and showModal()
- Close a dialog with method="dialog"
- Style ::backdrop

Elements and CSS used

HTML elements	CSS features
button, dialog, form method=dialog, h2, p, strong, script	::backdrop, backdrop-filter, box-shadow, border-radius

Build guide

1. Write the page with an open button and a <dialog>.
2. Inside the dialog, wrap the content in <form method="dialog"> with a close button.
3. Add the script that calls showModal() on click.
4. Remove the default border and round the dialog.
5. Style ::backdrop.
6. Test: Escape closes it; focus is trapped inside.

Project 676: index.html

```

Project 676 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Cairo Book Shop - Offer</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
Cairo Book Shop	The main heading; only one per page.
PDF and printed books about web development.	A paragraph of text.
<button type="button" id="open">See this week's offer</button>	A clickable button; inside a form it submits by default.
<dialog id="offer">	A dialog box; showModal() opens it as a modal.
<form method="dialog">	A form; action is where the data goes, method how it is sent.
This week only	Second-level heading for a section.

Line	What it does
<p>Learn HTML for 120 EGP: 20 percent off with the...	Strong importance (bold by default).
<script>	JavaScript; here only a few lines to open a dialog or switch a theme.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #b90000;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 40rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
border: 0;	Changes the visual order of a flex item without changing the source.
border-radius: 999px;	Fully rounded pill shape.

Declaration	What it does
background: var(--brand);	Background colour or image.
font: inherit;	Makes form controls use the page font instead of the browser default.
cursor: pointer;	Shows the hand cursor to indicate something clickable.
border: 0;	Removes the default border (for example on an iframe or button).
border-radius: 16px;	Rounds the corners.
box-shadow: 0 20px 60px rgb(0 0 0 / 30%);	Soft shadow that lifts the element from the page.
dialog::backdrop {	The dimmed layer behind a modal dialog.
backdrop-filter: blur(2px);	Blurs or filters whatever is behind the element.

Check your work

- Escape key closes
- Focus moves into the dialog
- Background is not clickable
- Close button visible

Exercises

1. Open the dialog automatically after 5 seconds, once per visit (localStorage).
2. Animate the entrance with @starting-style.
3. Add a form inside and read the returnValue.

box-shadow: 0 20px 60px rgb(0 0 0 / 30%);	Soft shadow that lifts the element from the page.
dialog::backdrop {	The dimmed layer behind a modal dialog.
backdrop-filter: blur(2px);	Blurs or filters whatever is behind the element.

Check your work

- Escape key closes
- Focus moves into the dialog
- Background is not clickable
- Close button visible

Exercises

1. Open the dialog automatically after 5 seconds, once per visit (localStorage).
2. Animate the entrance with @starting-style.
3. Add a form inside and read the returnValue.

Theme data for this project

Field	Value
Business	Delta Dental Clinic

Field	Value
Tagline	Gentle care for the whole family
City	Mansoura
Owner	Dr. Hana Youssef
Brand colour	#1d4ed8
Accent colour	#eff6ff
Offers	Check-up (300 EGP); Whitening (1500 EGP); Filling (600 EGP); Braces consultation (Free)

Project 680: Modal dialog for Red Sea Travel

Theme: Red Sea Travel (Hurghada) | Level 3 | Files: index.html, styles.css

Brief

Show a promotional pop-up using the native dialog element, opened with two lines of JavaScript, closed by a form with method=dialog, with a blurred backdrop.

Learning goals

- Use <dialog> and showModal()
- Close a dialog with method="dialog"
- Style ::backdrop

Elements and CSS used

HTML elements	CSS features
button, dialog, form method=dialog, h2, p, strong, script	::backdrop, backdrop-filter, box-shadow, border-radius

Build guide

1. Write the page with an open button and a <dialog>.
2. Inside the dialog, wrap the content in <form method="dialog"> with a close button.
3. Add the script that calls showModal() on click.
4. Remove the default border and round the dialog.
5. Style ::backdrop.
6. Test: Escape closes it; focus is trapped inside.

Project 680: index.html

Project 684: Modal dialog for Horizon Photography

Theme: Horizon Photography (Maadi) | Level 3 | Files: index.html, styles.css

Brief

Show a promotional pop-up using the native dialog element, opened with two lines of JavaScript, closed by a form with method=dialog, with a blurred backdrop.

Learning goals

- Use <dialog> and showModal()
- Close a dialog with method="dialog"
- Style ::backdrop

Elements and CSS used

HTML elements	CSS features
button, dialog, form method=dialog, h2, p, strong, script	::backdrop, backdrop-filter, box-shadow, border-radius

Build guide

1. Write the page with an open button and a <dialog>.
2. Inside the dialog, wrap the content in <form method="dialog"> with a close button.
3. Add the script that calls showModal() on click.
4. Remove the default border and round the dialog.
5. Style ::backdrop.
6. Test: Escape closes it; focus is trapped inside.

Project 684: index.html

```
<!DOCTYPE html>

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Horizon Photography - Offer</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
Horizon Photography	The main heading; only one per page.
Portraits, weddings and product photography.	A paragraph of text.
<button type="button" id="open">See this week's offer</button>	A clickable button; inside a form it submits by default.
<dialog id="offer">	A dialog box; showModal() opens it as a modal.
<form method="dialog">	A form; action is where the data goes, method how it is sent.
This week only	Second-level heading for a section.

Line	What it does
<p>Portrait session for 1200 EGP: 20 percent off w...	Strong importance (bold by default).
<script>	JavaScript; here only a few lines to open a dialog or switch a theme.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #111827;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 40rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
border: 0;	Changes the visual order of a flex item without changing the source.
border-radius: 999px;	Fully rounded pill shape.

Declaration	What it does
background: var(--brand);	Background colour or image.
font: inherit;	Makes form controls use the page font instead of the browser default.
cursor: pointer;	Shows the hand cursor to indicate something clickable.
border: 0;	Removes the default border (for example on an iframe or button).
border-radius: 16px;	Rounds the corners.
box-shadow: 0 20px 60px rgb(0 0 0 / 30%);	Soft shadow that lifts the element from the page.
dialog::backdrop {	The dimmed layer behind a modal dialog.
backdrop-filter: blur(2px);	Blurs or filters whatever is behind the element.

Check your work

- Escape key closes
- Focus moves into the dialog
- Background is not clickable
- Close button visible

Exercises

1. Open the dialog automatically after 5 seconds, once per visit (localStorage).
2. Animate the entrance with @starting-style.
3. Add a form inside and read the returnValue.

Theme data for this project

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Byte Repair - Offer</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
Byte Repair	The main heading; only one per page.
Phone and laptop repairs while you wait.	A paragraph of text.
<button type="button" id="open">See this week's offer</button>	A clickable button; inside a form it submits by default.
<dialog id="offer">	A dialog box; showModal() opens it as a modal.
<form method="dialog">	A form; action is where the data goes, method how it is sent.
This week only	Second-level heading for a section.

Line	What it does
<p>Screen replacement for From 800 EGP: 20 percent...	Strong importance (bold by default).
<script>	JavaScript; here only a few lines to open a dialog or switch a theme.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #0891b2;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 40rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
border: 0;	Changes the visual order of a flex item without changing the source.
border-radius: 999px;	Fully rounded pill shape.

Declaration	What it does
background: var(--brand);	Background colour or image.
font: inherit;	Makes form controls use the page font instead of the browser default.
cursor: pointer;	Shows the hand cursor to indicate something clickable.
border: 0;	Removes the default border (for example on an iframe or button).
border-radius: 16px;	Rounds the corners.
box-shadow: 0 20px 60px rgb(0 0 0 / 30%);	Soft shadow that lifts the element from the page.
dialog::backdrop {	The dimmed layer behind a modal dialog.
backdrop-filter: blur(2px);	Blurs or filters whatever is behind the element.

Check your work

- Escape key closes
- Focus moves into the dialog
- Background is not clickable
- Close button visible

Exercises

1. Open the dialog automatically after 5 seconds, once per visit (localStorage).
2. Animate the entrance with @starting-style.
3. Add a form inside and read the returnValue.

Theme data for this project

Field	Value
Business	Byte Repair

Field	Value
Tagline	Phone and laptop repairs while you wait
City	Nasr City
Owner	Mostafa Gamal
Brand colour	#0891b2
Accent colour	#ecfeff
Offers	Screen replacement (From 800 EGP); Battery swap (From 500 EGP); Laptop cleaning (350 EGP); Data recovery (From 1200 EGP)

Project 689: Modal dialog for Sahara Pet Care

Theme: Sahara Pet Care (New Cairo) | Level 3 | Files: index.html, styles.css

Brief

Show a promotional pop-up using the native dialog element, opened with two lines of JavaScript, closed by a form with method=dialog, with a blurred backdrop.

Learning goals

- Use <dialog> and showModal()
- Close a dialog with method="dialog"
- Style ::backdrop

Elements and CSS used

HTML elements	CSS features
button, dialog, form method=dialog, h2, p, strong, script	::backdrop, backdrop-filter, box-shadow, border-radius

Build guide

1. Write the page with an open button and a <dialog>.
2. Inside the dialog, wrap the content in <form method="dialog"> with a close button.
3. Add the script that calls showModal() on click.
4. Remove the default border and round the dialog.
5. Style ::backdrop.
6. Test: Escape closes it; focus is trapped inside.

Project 689: index.html

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Fayoum Pottery Studio - Offer</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
Fayoum Pottery Studio	The main heading; only one per page.
Wheel throwing and glazing classes.	A paragraph of text.
<button type="button" id="open">See this week's offer</button>	A clickable button; inside a form it submits by default.
<dialog id="offer">	A dialog box; showModal() opens it as a modal.
<form method="dialog">	A form; action is where the data goes, method how it is sent.
This week only	Second-level heading for a section.

Line	What it does
<p>Intro to the wheel for 450 EGP: 20 percent off ...	Strong importance (bold by default).
<script>	JavaScript; here only a few lines to open a dialog or switch a theme.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #9a3412;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 40rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
border: 0;	Changes the visual order of a flex item without changing the source.
border-radius: 999px;	Fully rounded pill shape.

Declaration	What it does
background: var(--brand);	Background colour or image.
font: inherit;	Makes form controls use the page font instead of the browser default.
cursor: pointer;	Shows the hand cursor to indicate something clickable.
border: 0;	Removes the default border (for example on an iframe or button).
border-radius: 16px;	Rounds the corners.
box-shadow: 0 20px 60px rgb(0 0 0 / 30%);	Soft shadow that lifts the element from the page.
dialog::backdrop {	The dimmed layer behind a modal dialog.
backdrop-filter: blur(2px);	Blurs or filters whatever is behind the element.

Check your work

- Escape key closes
- Focus moves into the dialog
- Background is not clickable
- Close button visible

Exercises

1. Open the dialog automatically after 5 seconds, once per visit (localStorage).
2. Animate the entrance with @starting-style.
3. Add a form inside and read the returnValue.

Theme data for this project

Field	Value
Business	Fayoum Pottery Studio

Field	Value
Tagline	Wheel throwing and glazing classes
City	Tunis Village
Owner	Ahmed Mahmoud
Brand colour	#9a3412

Project 693: Modal dialog for Cleopatra Beauty Salon

Theme: Cleopatra Beauty Salon (Dokki) | Level 3 | Files: index.html, styles.css

Brief

Show a promotional pop-up using the native dialog element, opened with two lines of JavaScript, closed by a form with method=dialog, with a blurred backdrop.

Learning goals

- Use <dialog> and showModal()
- Close a dialog with method="dialog"
- Style ::backdrop

Elements and CSS used

HTML elements	CSS features
button, dialog, form method=dialog, h2, p, strong, script	::backdrop, backdrop-filter, box-shadow, border-radius

Build guide

1. Write the page with an open button and a <dialog>.
2. Inside the dialog, wrap the content in <form method="dialog"> with a close button.
3. Add the script that calls showModal() on click.
4. Remove the default border and round the dialog.
5. Style ::backdrop.
6. Test: Escape closes it; focus is trapped inside.

Project 696 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Port Said Seafood - Offer</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
Port Said Seafood	The main heading; only one per page.
Grilled fish straight from the boats.	A paragraph of text.
<button type="button" id="open">See this week's offer</button>	A clickable button; inside a form it submits by default.
<dialog id="offer">	A dialog box; showModal() opens it as a modal.
<form method="dialog">	A form; action is where the data goes, method how it is sent.
This week only	Second-level heading for a section.

Line	What it does
<p>Grilled sea bass for 320 EGP: 20 percent off wi...	Strong importance (bold by default).
<script>	JavaScript; here only a few lines to open a dialog or switch a theme.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #0e7490;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 40rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
border: 0;	Changes the visual order of a flex item without changing the source.
border-radius: 999px;	Fully rounded pill shape.

Declaration	What it does
background: var(--brand);	Background colour or image.
font: inherit;	Makes form controls use the page font instead of the browser default.
cursor: pointer;	Shows the hand cursor to indicate something clickable.
border: 0;	Removes the default border (for example on an iframe or button).
border-radius: 16px;	Rounds the corners.
box-shadow: 0 20px 60px rgb(0 0 0 / 30%);	Soft shadow that lifts the element from the page.
dialog::backdrop {	The dimmed layer behind a modal dialog.
backdrop-filter: blur(2px);	Blurs or filters whatever is behind the element.

Check your work

- Escape key closes
- Focus moves into the dialog
- Background is not clickable
- Close button visible

Exercises

1. Open the dialog automatically after 5 seconds, once per visit (localStorage).
2. Animate the entrance with @starting-style.
3. Add a form inside and read the returnValue.

Theme data for this project

Field	Value
Business	Port Said Seafood

Field	Value
Tagline	Grilled fish straight from the boats
City	Port Said
Owner	Sherif Wahba
Brand colour	#0e7490
Accent colour	#ecfeff
Offers	Grilled sea bass (320 EGP); Shrimp tagine (280 EGP); Calamari (190 EGP); Fish soup (120 EGP)

Project 697: Modal dialog for Delta Kids Library

Theme: Delta Kids Library (Tanta) | Level 3 | Files: index.html, styles.css

Brief

Show a promotional pop-up using the native dialog element, opened with two lines of JavaScript, closed by a form with method=dialog, with a blurred backdrop.

Learning goals

- Use <dialog> and showModal()
- Close a dialog with method="dialog"
- Style ::backdrop

Elements and CSS used

HTML elements	CSS features
button, dialog, form method=dialog, h2, p, strong, script	::backdrop, backdrop-filter, box-shadow, border-radius

Build guide

1. Write the page with an open button and a <dialog>.
2. Inside the dialog, wrap the content in <form method="dialog"> with a close button.
3. Add the script that calls showModal() on click.
4. Remove the default border and round the dialog.
5. Style ::backdrop.
6. Test: Escape closes it; focus is trapped inside.

Project 697: index.html

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Minya Coding Club - Offer</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
Minya Coding Club	The main heading; only one per page.
Free weekend coding for teenagers.	A paragraph of text.
<button type="button" id="open">See this week's offer</button>	A clickable button; inside a form it submits by default.
<dialog id="offer">	A dialog box; showModal() opens it as a modal.
<form method="dialog">	A form; action is where the data goes, method how it is sent.
This week only	Second-level heading for a section.

Line	What it does
<p>HTML weekend for Free: 20 percent off with the …	Strong importance (bold by default).
<script>	JavaScript; here only a few lines to open a dialog or switch a theme.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #2563eb;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 40rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
border: 0;	Changes the visual order of a flex item without changing the source.
border-radius: 999px;	Fully rounded pill shape.

Declaration	What it does
background: var(--brand);	Background colour or image.
font: inherit;	Makes form controls use the page font instead of the browser default.
cursor: pointer;	Shows the hand cursor to indicate something clickable.
border: 0;	Removes the default border (for example on an iframe or button).
border-radius: 16px;	Rounds the corners.
box-shadow: 0 20px 60px rgb(0 0 0 / 30%);	Soft shadow that lifts the element from the page.
dialog::backdrop {	The dimmed layer behind a modal dialog.
backdrop-filter: blur(2px);	Blurs or filters whatever is behind the element.

Check your work

- Escape key closes
- Focus moves into the dialog
- Background is not clickable
- Close button visible

Exercises

1. Open the dialog automatically after 5 seconds, once per visit (localStorage).
2. Animate the entrance with @starting-style.
3. Add a form inside and read the returnValue.

Project type: Search bar and results page

Level 2 | 25 projects, one per theme

Build a header search box with datalist suggestions and a joined input/button pair, plus a results list styled like a search engine.

Project 701: Search bar and results page for Cairo Book Shop

Theme: Cairo Book Shop (Giza) | Level 2 | Files: index.html, styles.css

Brief

Build a header search box with datalist suggestions and a joined input/button pair, plus a results list styled like a search engine.

Learning goals

- Use the search element, type=search and datalist
- Join an input and button with asymmetric border-radius
- Present results as an ordered list

Elements and CSS used

HTML elements	CSS features
search, form, label, input type=search, datalist, option, button, ol, li, a, q	flex: 1 1 18rem, border-radius (four values), border-right: 0, list-style: none

Build guide

1. Write the header with logo and <search> containing the form.
2. Add a datalist with one option per offer and link it with list=.
3. Add the results list.
4. Flex the bar; let the search area grow.
5. Round only the outer corners of input and button.

6. Style the results.

Project 701: index.html

```
<!DOCTYPE html>

<main>	The unique content of this page; exactly one per page.
Search results	The main heading; only one per page.
3 results for <q>book</q>	A paragraph of text.
<ol class="results">	Ordered (numbered) list; the order matters.
Learn HTML From your first tag to a complete ...	A hyperlink; href gives the destination.
CSS in Practice Layouts, colours and typograp...	One list item.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #b90000;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.

Declaration	What it does
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
display: flex;	Turns the element into a flex container (one-dimensional layout).
gap: 1rem;	Space between grid or flex items without extra margins.
align-items: center;	Centres items on the cross axis.
padding: .75rem 1.5rem;	Space inside the element between its border and content.
background: var(--accent);	Background colour or image.
flex-wrap: wrap;	Allows flex items to move to a new line when they do not fit.
font-weight: 700;	Thickness of the text.
text-decoration: none;	Removes the underline from links.
flex: 1 1 18rem;	The item can grow and shrink from the given basis.
flex: 1;	All items share free space equally.
border: 1px solid #bbb;	Changes the visual order of a flex item without changing the source.
border-right: 0;	The line around the element: width, style and colour.
border-radius: 999px 0 0 999px;	Fully rounded pill shape.
font: inherit;	Makes form controls use the page font instead of the browser default.
border: 0;	Removes the default border (for example on an iframe or button).

Declaration	What it does
border-radius: 0 999px 999px 0;	Rounds the corners.
max-width: 40rem;	Limits how wide the element can grow, keeping lines readable.
list-style: none;	Removes bullets or numbers from a list.
border-bottom: 1px solid var(--line);	A bottom border used as a separator line.
font-size: 1.1rem;	Size of the text.
.sr-only {	Visually hidden but still read by screen readers.
position: absolute;	Removes the element from flow and positions it relative to the nearest positioned ancestor.
overflow: hidden;	Clips content that sticks out, so images follow rounded corners.
clip: rect(0 0 0 0);	Part of the screen-reader-only pattern: clips the box to nothing.
white-space: nowrap;	Prevents text from wrapping to a new line.

Check your work

- Typing shows suggestions
- Label exists (hidden)
- Button attached to input visually
- Results are links with descriptions

Exercises

1. Highlight the matched word in results with <mark>.
2. Add filters with checkboxes in an aside.
3. Add 'no results' state styling.

<button>Go</button>	A clickable button; inside a form it submits by default.
<main>	The unique content of this page; exactly one per page.
Search results	The main heading; only one per page.
3 results for <q>class</q>	A paragraph of text.
<ol class="results">	Ordered (numbered) list; the order matters.
Morning yoga Flexibility and calm, 60 minutes...	A hyperlink; href gives the destination.
Strength circuit Full body, all levels.	One list item.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #0f766e;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.

Declaration	What it does
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
display: flex;	Turns the element into a flex container (one-dimensional layout).
gap: 1rem;	Space between grid or flex items without extra margins.
align-items: center;	Centres items on the cross axis.
padding: .75rem 1.5rem;	Space inside the element between its border and content.
background: var(--accent);	Background colour or image.
flex-wrap: wrap;	Allows flex items to move to a new line when they do not fit.
font-weight: 700;	Thickness of the text.
text-decoration: none;	Removes the underline from links.
flex: 1 1 18rem;	The item can grow and shrink from the given basis.
flex: 1;	All items share free space equally.
border: 1px solid #bbb;	Changes the visual order of a flex item without changing the source.
border-right: 0;	The line around the element: width, style and colour.
border-radius: 999px 0 0 999px;	Fully rounded pill shape.
font: inherit;	Makes form controls use the page font instead of the browser default.
border: 0;	Removes the default border (for example on an iframe or button).

Declaration	What it does
border-radius: 0 999px 999px 0;	Rounds the corners.
max-width: 40rem;	Limits how wide the element can grow, keeping lines readable.
list-style: none;	Removes bullets or numbers from a list.
border-bottom: 1px solid var(--line);	A bottom border used as a separator line.
font-size: 1.1rem;	Size of the text.
.sr-only {	Visually hidden but still read by screen readers.
position: absolute;	Removes the element from flow and positions it relative to the nearest positioned ancestor.
overflow: hidden;	Clips content that sticks out, so images follow rounded corners.
clip: rect(0 0 0 0);	Part of the screen-reader-only pattern: clips the box to nothing.
white-space: nowrap;	Prevents text from wrapping to a new line.

Check your work

- Typing shows suggestions
- Label exists (hidden)
- Button attached to input visually
- Results are links with descriptions

Exercises

1. Highlight the matched word in results with <mark>.
2. Add filters with checkboxes in an aside.
3. Add 'no results' state styling.

Theme data for this project

Field	Value
Business	Pyramid Fitness
Tagline	Train smarter, feel stronger
City	6th of October
Owner	Omar Farouk
Brand colour	#0f766e
Accent colour	#ecfdf5
Offers	Morning yoga (100 EGP); Strength circuit (120 EGP); Spinning (110 EGP); Personal training (350 EGP)

Project 704: Search bar and results page for Delta Dental Clinic

Theme: Delta Dental Clinic (Mansoura) | Level 2 | Files: index.html, styles.css

Brief

Build a header search box with datalist suggestions and a joined input/button pair, plus a results list styled like a search engine.

Learning goals

- Use the search element, type=search and datalist
- Join an input and button with asymmetric border-radius
- Present results as an ordered list

Elements and CSS used

HTML elements	CSS features
search, form, label, input type=search, datalist, option, button, ol, li, a, q	flex: 1 1 18rem, border-radius (four values), border-right: 0, list-style: none

Build guide

1. Write the header with logo and <search> containing the form.
2. Add a datalist with one option per offer and link it with list=.
3. Add the results list.
4. Flex the bar; let the search area grow.
5. Round only the outer corners of input and button.

6. Style the results.

Project 704: index.html

```

Line	What it does
<button>Go</button>	A clickable button; inside a form it submits by default.
<main>	The unique content of this page; exactly one per page.
Search results	The main heading; only one per page.
3 results for <q>course</q>	A paragraph of text.
<ol class="results">	Ordered (numbered) list; the order matters.
English A1 Beginner, 8 weeks.	A hyperlink; href gives the destination.
French B1 Intermediate conversation.	One list item.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #7c3aed;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.

Declaration	What it does
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
display: flex;	Turns the element into a flex container (one-dimensional layout).
gap: 1rem;	Space between grid or flex items without extra margins.
align-items: center;	Centres items on the cross axis.
padding: .75rem 1.5rem;	Space inside the element between its border and content.
background: var(--accent);	Background colour or image.
flex-wrap: wrap;	Allows flex items to move to a new line when they do not fit.
font-weight: 700;	Thickness of the text.
text-decoration: none;	Removes the underline from links.
flex: 1 1 18rem;	The item can grow and shrink from the given basis.
flex: 1;	All items share free space equally.
border: 1px solid #bbb;	Changes the visual order of a flex item without changing the source.
border-right: 0;	The line around the element: width, style and colour.
border-radius: 999px 0 0 999px;	Fully rounded pill shape.
font: inherit;	Makes form controls use the page font instead of the browser default.
border: 0;	Removes the default border (for example on an iframe or button).

Declaration	What it does
border-radius: 0 999px 999px 0;	Rounds the corners.
max-width: 40rem;	Limits how wide the element can grow, keeping lines readable.
list-style: none;	Removes bullets or numbers from a list.
border-bottom: 1px solid var(--line);	A bottom border used as a separator line.
font-size: 1.1rem;	Size of the text.
.sr-only {	Visually hidden but still read by screen readers.
position: absolute;	Removes the element from flow and positions it relative to the nearest positioned ancestor.
overflow: hidden;	Clips content that sticks out, so images follow rounded corners.
clip: rect(0 0 0 0);	Part of the screen-reader-only pattern: clips the box to nothing.
white-space: nowrap;	Prevents text from wrapping to a new line.

Check your work

- Typing shows suggestions
- Label exists (hidden)
- Button attached to input visually
- Results are links with descriptions

Exercises

1. Highlight the matched word in results with <mark>.
2. Add filters with checkboxes in an aside.
3. Add 'no results' state styling.

Theme data for this project

Field	Value
Business	Lotus Language School
Tagline	Learn English, French and German in small groups
City	Alexandria
Owner	Nour El Din
Brand colour	#7c3aed
Accent colour	#f5f3ff
Offers	English A1 (1800 EGP); French B1 (2200 EGP); German A2 (2000 EGP); IELTS preparation (3000 EGP)

Project 707: Search bar and results page for Green Leaf Cafe

Theme: Green Leaf Cafe (Zamalek) | Level 2 | Files: index.html, styles.css

Brief

Build a header search box with datalist suggestions and a joined input/button pair, plus a results list styled like a search engine.

Learning goals

- Use the search element, type=search and datalist
- Join an input and button with asymmetric border-radius
- Present results as an ordered list

Elements and CSS used

HTML elements	CSS features
search, form, label, input type=search, datalist, option, button, ol, li, a, q	flex: 1 1 18rem, border-radius (four values), border-right: 0, list-style: none

Build guide

1. Write the header with logo and <search> containing the form.
2. Add a datalist with one option per offer and link it with list=.
3. Add the results list.
4. Flex the bar; let the search area grow.
5. Round only the outer corners of input and button.

6. Style the results.

Project 707: index.html

```
<!DOCTYPE html>

Line	What it does
<button>Go</button>	A clickable button; inside a form it submits by default.
<main>	The unique content of this page; exactly one per page.
Search results	The main heading; only one per page.
3 results for <q>session</q>	A paragraph of text.
<ol class="results">	Ordered (numbered) list; the order matters.
Portrait session One hour, 20 edited photos.<...	A hyperlink; href gives the destination.
Wedding day Full coverage, two photographers....	One list item.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #111827;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.

Declaration	What it does
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
display: flex;	Turns the element into a flex container (one-dimensional layout).
gap: 1rem;	Space between grid or flex items without extra margins.
align-items: center;	Centres items on the cross axis.
padding: .75rem 1.5rem;	Space inside the element between its border and content.
background: var(--accent);	Background colour or image.
flex-wrap: wrap;	Allows flex items to move to a new line when they do not fit.
font-weight: 700;	Thickness of the text.
text-decoration: none;	Removes the underline from links.
flex: 1 1 18rem;	The item can grow and shrink from the given basis.
flex: 1;	All items share free space equally.
border: 1px solid #bbb;	Changes the visual order of a flex item without changing the source.
border-right: 0;	The line around the element: width, style and colour.
border-radius: 999px 0 0 999px;	Fully rounded pill shape.
font: inherit;	Makes form controls use the page font instead of the browser default.
border: 0;	Removes the default border (for example on an iframe or button).

Declaration	What it does
border-radius: 0 999px 999px 0;	Rounds the corners.
max-width: 40rem;	Limits how wide the element can grow, keeping lines readable.
list-style: none;	Removes bullets or numbers from a list.
border-bottom: 1px solid var(--line);	A bottom border used as a separator line.
font-size: 1.1rem;	Size of the text.
.sr-only {	Visually hidden but still read by screen readers.
position: absolute;	Removes the element from flow and positions it relative to the nearest positioned ancestor.
overflow: hidden;	Clips content that sticks out, so images follow rounded corners.
clip: rect(0 0 0 0);	Part of the screen-reader-only pattern: clips the box to nothing.
white-space: nowrap;	Prevents text from wrapping to a new line.

Check your work

- Typing shows suggestions
- Label exists (hidden)
- Button attached to input visually
- Results are links with descriptions

Exercises

1. Highlight the matched word in results with <mark>.
2. Add filters with checkboxes in an aside.
3. Add 'no results' state styling.

Theme data for this project

Field	Value
Business	Horizon Photography
Tagline	Portraits, weddings and product photography
City	Maadi
Owner	Adham Nabil
Brand colour	#111827
Accent colour	#f3f4f6
Offers	Portrait session (1200 EGP); Wedding day (15000 EGP); Product shoot (900 EGP); Family session (1500 EGP)

Project 710: Search bar and results page for Papyrus Stationery

Theme: Papyrus Stationery (Heliopolis) | Level 2 | Files: index.html, styles.css

Brief

Build a header search box with datalist suggestions and a joined input/button pair, plus a results list styled like a search engine.

Learning goals

- Use the search element, type=search and datalist
- Join an input and button with asymmetric border-radius
- Present results as an ordered list

Elements and CSS used

HTML elements	CSS features
search, form, label, input type=search, datalist, option, button, ol, li, a, q	flex: 1 1 18rem, border-radius (four values), border-right: 0, list-style: none

Build guide

1. Write the header with logo and <search> containing the form.
2. Add a datalist with one option per offer and link it with list=.
3. Add the results list.
4. Flex the bar; let the search area grow.
5. Round only the outer corners of input and button.

6. Style the results.

Project 710: index.html

```

<button>Go</button>	A clickable button; inside a form it submits by default.
<main>	The unique content of this page; exactly one per page.
Search results	The main heading; only one per page.
3 results for <q>piece</q>	A paragraph of text.
<ol class="results">	Ordered (numbered) list; the order matters.
Oak dining table Seats six.	A hyperlink; href gives the destination.
Bookshelf Five shelves, walnut.	One list item.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #78350f;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.

Declaration	What it does
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
display: flex;	Turns the element into a flex container (one-dimensional layout).
gap: 1rem;	Space between grid or flex items without extra margins.
align-items: center;	Centres items on the cross axis.
padding: .75rem 1.5rem;	Space inside the element between its border and content.
background: var(--accent);	Background colour or image.
flex-wrap: wrap;	Allows flex items to move to a new line when they do not fit.
font-weight: 700;	Thickness of the text.
text-decoration: none;	Removes the underline from links.
flex: 1 1 18rem;	The item can grow and shrink from the given basis.
flex: 1;	All items share free space equally.
border: 1px solid #bbb;	Changes the visual order of a flex item without changing the source.
border-right: 0;	The line around the element: width, style and colour.
border-radius: 999px 0 0 999px;	Fully rounded pill shape.
font: inherit;	Makes form controls use the page font instead of the browser default.
border: 0;	Removes the default border (for example on an iframe or button).

Declaration	What it does
border-radius: 0 999px 999px 0;	Rounds the corners.
max-width: 40rem;	Limits how wide the element can grow, keeping lines readable.
list-style: none;	Removes bullets or numbers from a list.
border-bottom: 1px solid var(--line);	A bottom border used as a separator line.
font-size: 1.1rem;	Size of the text.
.sr-only {	Visually hidden but still read by screen readers.
position: absolute;	Removes the element from flow and positions it relative to the nearest positioned ancestor.
overflow: hidden;	Clips content that sticks out, so images follow rounded corners.
clip: rect(0 0 0 0);	Part of the screen-reader-only pattern: clips the box to nothing.
white-space: nowrap;	Prevents text from wrapping to a new line.

Check your work

- Typing shows suggestions
- Label exists (hidden)
- Button attached to input visually
- Results are links with descriptions

Exercises

1. Highlight the matched word in results with <mark>.
2. Add filters with checkboxes in an aside.
3. Add 'no results' state styling.

Theme data for this project

Field	Value
Business	Cedar Furniture
Tagline	Solid wood furniture made to order
City	Damietta
Owner	Tarek Lotfy
Brand colour	#78350f
Accent colour	#fef3c7
Offers	Oak dining table (9500 EGP); Bookshelf (4200 EGP); Bedside table (1500 EGP); Coffee table (2800 EGP)

Project 713: Search bar and results page for Byte Repair

Theme: Byte Repair (Nasr City) | Level 2 | Files: index.html, styles.css

Brief

Build a header search box with datalist suggestions and a joined input/button pair, plus a results list styled like a search engine.

Learning goals

- Use the search element, type=search and datalist
- Join an input and button with asymmetric border-radius
- Present results as an ordered list

Elements and CSS used

HTML elements	CSS features
search, form, label, input type=search, datalist, option, button, ol, li, a, q	flex: 1 1 18rem, border-radius (four values), border-right: 0, list-style: none

Build guide

1. Write the header with logo and <search> containing the form.
2. Add a datalist with one option per offer and link it with list=.
3. Add the results list.
4. Flex the bar; let the search area grow.
5. Round only the outer corners of input and button.
6. Style the results.

Project 713: index.html

```

<main>	The unique content of this page; exactly one per page.
Search results	The main heading; only one per page.
3 results for <q>lesson</q>	A paragraph of text.
<ol class="results">	Ordered (numbered) list; the order matters.
Taster session Two hours on the water.	A hyperlink; href gives the destination.
Beginner course Five sessions.	One list item.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #1e40af;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.

Declaration	What it does
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
display: flex;	Turns the element into a flex container (one-dimensional layout).
gap: 1rem;	Space between grid or flex items without extra margins.
align-items: center;	Centres items on the cross axis.
padding: .75rem 1.5rem;	Space inside the element between its border and content.
background: var(--accent);	Background colour or image.
flex-wrap: wrap;	Allows flex items to move to a new line when they do not fit.
font-weight: 700;	Thickness of the text.
text-decoration: none;	Removes the underline from links.
flex: 1 1 18rem;	The item can grow and shrink from the given basis.
flex: 1;	All items share free space equally.
border: 1px solid #bbb;	Changes the visual order of a flex item without changing the source.
border-right: 0;	The line around the element: width, style and colour.
border-radius: 999px 0 0 999px;	Fully rounded pill shape.
font: inherit;	Makes form controls use the page font instead of the browser default.
border: 0;	Removes the default border (for example on an iframe or button).

Declaration	What it does
border-radius: 0 999px 999px 0;	Rounds the corners.
max-width: 40rem;	Limits how wide the element can grow, keeping lines readable.
list-style: none;	Removes bullets or numbers from a list.
border-bottom: 1px solid var(--line);	A bottom border used as a separator line.
font-size: 1.1rem;	Size of the text.
.sr-only {	Visually hidden but still read by screen readers.
position: absolute;	Removes the element from flow and positions it relative to the nearest positioned ancestor.
overflow: hidden;	Clips content that sticks out, so images follow rounded corners.
clip: rect(0 0 0 0);	Part of the screen-reader-only pattern: clips the box to nothing.
white-space: nowrap;	Prevents text from wrapping to a new line.

Check your work

- Typing shows suggestions
- Label exists (hidden)
- Button attached to input visually
- Results are links with descriptions

Exercises

1. Highlight the matched word in results with <mark>.
2. Add filters with checkboxes in an aside.
3. Add 'no results' state styling.

Theme data for this project

Field	Value
Business	Alexandria Sailing School
Tagline	Learn to sail on the Mediterranean
City	Alexandria
Owner	Amr Selim
Brand colour	#1e40af
Accent colour	#eff6ff
Offers	Taster session (500 EGP); Beginner course (2200 EGP); Racing clinic (1800 EGP); Private lesson (900 EGP)

Project 716: Search bar and results page for Habiba Handmade Jewellery

Theme: Habiba Handmade Jewellery (Aswan) | Level 2 | Files: index.html, styles.css

Brief

Build a header search box with datalist suggestions and a joined input/button pair, plus a results list styled like a search engine.

Learning goals

- Use the search element, type=search and datalist
- Join an input and button with asymmetric border-radius
- Present results as an ordered list

Elements and CSS used

HTML elements	CSS features
search, form, label, input type=search, datalist, option, button, ol, li, a, q	flex: 1 1 18rem, border-radius (four values), border-right: 0, list-style: none

Build guide

1. Write the header with logo and <search> containing the form.
2. Add a datalist with one option per offer and link it with list=.
3. Add the results list.
4. Flex the bar; let the search area grow.
5. Round only the outer corners of input and button.

6. Style the results.

Project 716: index.html

```

<main>	The unique content of this page; exactly one per page.
Search results	The main heading; only one per page.
3 results for <q>treatment</q>	A paragraph of text.
<ol class="results">	Ordered (numbered) list; the order matters.
Haircut and blow-dry Consultation included.<//...	A hyperlink; href gives the destination.
Manicure Classic or gel.	One list item.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #db2777;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.

Declaration	What it does
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
display: flex;	Turns the element into a flex container (one-dimensional layout).
gap: 1rem;	Space between grid or flex items without extra margins.
align-items: center;	Centres items on the cross axis.
padding: .75rem 1.5rem;	Space inside the element between its border and content.
background: var(--accent);	Background colour or image.
flex-wrap: wrap;	Allows flex items to move to a new line when they do not fit.
font-weight: 700;	Thickness of the text.
text-decoration: none;	Removes the underline from links.
flex: 1 1 18rem;	The item can grow and shrink from the given basis.
flex: 1;	All items share free space equally.
border: 1px solid #bbb;	Changes the visual order of a flex item without changing the source.
border-right: 0;	The line around the element: width, style and colour.
border-radius: 999px 0 0 999px;	Fully rounded pill shape.
font: inherit;	Makes form controls use the page font instead of the browser default.
border: 0;	Removes the default border (for example on an iframe or button).

Declaration	What it does
border-radius: 0 999px 999px 0;	Rounds the corners.
max-width: 40rem;	Limits how wide the element can grow, keeping lines readable.
list-style: none;	Removes bullets or numbers from a list.
border-bottom: 1px solid var(--line);	A bottom border used as a separator line.
font-size: 1.1rem;	Size of the text.
.sr-only {	Visually hidden but still read by screen readers.
position: absolute;	Removes the element from flow and positions it relative to the nearest positioned ancestor.
overflow: hidden;	Clips content that sticks out, so images follow rounded corners.
clip: rect(0 0 0 0);	Part of the screen-reader-only pattern: clips the box to nothing.
white-space: nowrap;	Prevents text from wrapping to a new line.

Check your work

- Typing shows suggestions
- Label exists (hidden)
- Button attached to input visually
- Results are links with descriptions

Exercises

1. Highlight the matched word in results with <mark>.
2. Add filters with checkboxes in an aside.
3. Add 'no results' state styling.

Theme data for this project

Field	Value
Business	Cleopatra Beauty Salon
Tagline	Hair, nails and skin care
City	Dokki
Owner	Mariam Adel
Brand colour	#db2777
Accent colour	#fdf2f8
Offers	Haircut and blow-dry (350 EGP); Manicure (200 EGP); Facial (600 EGP); Bridal package (4500 EGP)

Project 719: Search bar and results page for Suez Auto Service

Theme: Suez Auto Service (Suez) | Level 2 | Files: index.html, styles.css

Brief

Build a header search box with datalist suggestions and a joined input/button pair, plus a results list styled like a search engine.

Learning goals

- Use the search element, type=search and datalist
- Join an input and button with asymmetric border-radius
- Present results as an ordered list

Elements and CSS used

HTML elements	CSS features
search, form, label, input type=search, datalist, option, button, ol, li, a, q	flex: 1 1 18rem, border-radius (four values), border-right: 0, list-style: none

Build guide

1. Write the header with logo and <search> containing the form.
2. Add a datalist with one option per offer and link it with list=.
3. Add the results list.
4. Flex the bar; let the search area grow.
5. Round only the outer corners of input and button.

6. Style the results.

Project 719: index.html

```
<!DOCTYPE html>

<main>	The unique content of this page; exactly one per page.
Search results	The main heading; only one per page.
3 results for <q>dish</q>	A paragraph of text.
<ol class="results">	Ordered (numbered) list; the order matters.
Grilled sea bass With rice and salad.	A hyperlink; href gives the destination.
Shrimp tagine Tomato and garlic.	One list item.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #0e7490;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.

Declaration	What it does
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
display: flex;	Turns the element into a flex container (one-dimensional layout).
gap: 1rem;	Space between grid or flex items without extra margins.
align-items: center;	Centres items on the cross axis.
padding: .75rem 1.5rem;	Space inside the element between its border and content.
background: var(--accent);	Background colour or image.
flex-wrap: wrap;	Allows flex items to move to a new line when they do not fit.
font-weight: 700;	Thickness of the text.
text-decoration: none;	Removes the underline from links.
flex: 1 1 18rem;	The item can grow and shrink from the given basis.
flex: 1;	All items share free space equally.
border: 1px solid #bbb;	Changes the visual order of a flex item without changing the source.
border-right: 0;	The line around the element: width, style and colour.
border-radius: 999px 0 0 999px;	Fully rounded pill shape.
font: inherit;	Makes form controls use the page font instead of the browser default.
border: 0;	Removes the default border (for example on an iframe or button).

Declaration	What it does
border-radius: 0 999px 999px 0;	Rounds the corners.
max-width: 40rem;	Limits how wide the element can grow, keeping lines readable.
list-style: none;	Removes bullets or numbers from a list.
border-bottom: 1px solid var(--line);	A bottom border used as a separator line.
font-size: 1.1rem;	Size of the text.
.sr-only {	Visually hidden but still read by screen readers.
position: absolute;	Removes the element from flow and positions it relative to the nearest positioned ancestor.
overflow: hidden;	Clips content that sticks out, so images follow rounded corners.
clip: rect(0 0 0 0);	Part of the screen-reader-only pattern: clips the box to nothing.
white-space: nowrap;	Prevents text from wrapping to a new line.

Check your work

- Typing shows suggestions
- Label exists (hidden)
- Button attached to input visually
- Results are links with descriptions

Exercises

1. Highlight the matched word in results with <mark>.
2. Add filters with checkboxes in an aside.
3. Add 'no results' state styling.

Theme data for this project

Field	Value
Business	Port Said Seafood
Tagline	Grilled fish straight from the boats
City	Port Said
Owner	Sherif Wahba
Brand colour	#0e7490
Accent colour	#ecfeff
Offers	Grilled sea bass (320 EGP); Shrimp tagine (280 EGP); Calamari (190 EGP); Fish soup (120 EGP)

Project 722: Search bar and results page for Delta Kids Library

Theme: Delta Kids Library (Tanta) | Level 2 | Files: index.html, styles.css

Brief

Build a header search box with datalist suggestions and a joined input/button pair, plus a results list styled like a search engine.

Learning goals

- Use the search element, type=search and datalist
- Join an input and button with asymmetric border-radius
- Present results as an ordered list

Elements and CSS used

HTML elements	CSS features
search, form, label, input type=search, datalist, option, button, ol, li, a, q	flex: 1 1 18rem, border-radius (four values), border-right: 0, list-style: none

Build guide

1. Write the header with logo and <search> containing the form.
2. Add a datalist with one option per offer and link it with list=.
3. Add the results list.
4. Flex the bar; let the search area grow.
5. Round only the outer corners of input and button.

6. Style the results.

Project 722: index.html

```

Search results	The main heading; only one per page.
3 results for <q>bike</q>	A paragraph of text.
<ol class="results">	Ordered (numbered) list; the order matters.
City bike Seven gears, basket.	A hyperlink; href gives the destination.
Mountain bike Front suspension.	One list item.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #dc2626;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.

Declaration	What it does
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
display: flex;	Turns the element into a flex container (one-dimensional layout).
gap: 1rem;	Space between grid or flex items without extra margins.
align-items: center;	Centres items on the cross axis.
padding: .75rem 1.5rem;	Space inside the element between its border and content.
background: var(--accent);	Background colour or image.
flex-wrap: wrap;	Allows flex items to move to a new line when they do not fit.
font-weight: 700;	Thickness of the text.
text-decoration: none;	Removes the underline from links.
flex: 1 1 18rem;	The item can grow and shrink from the given basis.
flex: 1;	All items share free space equally.
border: 1px solid #bbb;	Changes the visual order of a flex item without changing the source.
border-right: 0;	The line around the element: width, style and colour.
border-radius: 999px 0 0 999px;	Fully rounded pill shape.
font: inherit;	Makes form controls use the page font instead of the browser default.
border: 0;	Removes the default border (for example on an iframe or button).

Declaration	What it does
border-radius: 0 999px 999px 0;	Rounds the corners.
max-width: 40rem;	Limits how wide the element can grow, keeping lines readable.
list-style: none;	Removes bullets or numbers from a list.
border-bottom: 1px solid var(--line);	A bottom border used as a separator line.
font-size: 1.1rem;	Size of the text.
.sr-only {	Visually hidden but still read by screen readers.
position: absolute;	Removes the element from flow and positions it relative to the nearest positioned ancestor.
overflow: hidden;	Clips content that sticks out, so images follow rounded corners.
clip: rect(0 0 0 0);	Part of the screen-reader-only pattern: clips the box to nothing.
white-space: nowrap;	Prevents text from wrapping to a new line.

Check your work

- Typing shows suggestions
- Label exists (hidden)
- Button attached to input visually
- Results are links with descriptions

Exercises

1. Highlight the matched word in results with <mark>.
2. Add filters with checkboxes in an aside.
3. Add 'no results' state styling.

Theme data for this project

Field	Value
Business	Ismailia Cycling Store
Tagline	Bikes, parts and Friday group rides
City	Ismailia
Owner	Bassem Adly
Brand colour	#dc2626
Accent colour	#fef2f2
Offers	City bike (6500 EGP); Mountain bike (11000 EGP); Kids bike (3200 EGP); Tune-up (250 EGP)

Project 725: Search bar and results page for Minya Coding Club

Theme: Minya Coding Club (Minya) | Level 2 | Files: index.html, styles.css

Brief

Build a header search box with datalist suggestions and a joined input/button pair, plus a results list styled like a search engine.

Learning goals

- Use the search element, type=search and datalist
- Join an input and button with asymmetric border-radius
- Present results as an ordered list

Elements and CSS used

HTML elements	CSS features
search, form, label, input type=search, datalist, option, button, ol, li, a, q	flex: 1 1 18rem, border-radius (four values), border-right: 0, list-style: none

Build guide

1. Write the header with logo and <search> containing the form.
2. Add a datalist with one option per offer and link it with list=.
3. Add the results list.
4. Flex the bar; let the search area grow.
5. Round only the outer corners of input and button.

6. Style the results.

Project 725: index.html

Project type: Order progress tracker

Level 3 | 25 projects, one per theme

Show order status as a numbered step indicator built with CSS counters and pseudo-elements, plus native progress and meter elements.

Project 726: Order progress tracker for Cairo Book Shop

Theme: Cairo Book Shop (Giza) | Level 3 | Files: index.html, styles.css

Brief

Show order status as a numbered step indicator built with CSS counters and pseudo-elements, plus native progress and meter elements.

Learning goals

- Use counter-reset and counter-increment
- Use progress and meter
- Build connector lines with ::after

Elements and CSS used

HTML elements	CSS features
ol, li, progress, meter, label, strong	counter-reset, counter(), ::before/::after, translate, accent-color, z-index

Build guide

1. Write the ol with classes done/current and aria-current="step".
2. Add progress and meter elements with values.
3. Flex the list; each li gets equal width.
4. Number the circles with counters in ::before.
5. Draw connector lines with ::after.
6. Colour completed steps and the progress bar with accent-color.

Project 726: index.html

```
<!DOCTYPE html>

<li class="done">Received	One list item.
<li class="current" aria-current="step">On the way	Tells assistive technology which item is the current page or step.
<label for="p">Progress</label>	Text label for a control; for matches the control's id, or the label wraps the control.

Line	What it does
<progress id="p" value="3" max="4">75%</progress>	Progress of a task.
Rating so far	Second-level heading for a section.
<meter value="4.8" min="0" max="5" low="2" high="4" optimum="5">4.8...	A measurement within a known range.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #b90000;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 40rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
list-style: none;	Removes bullets or numbers from a list.

Declaration	What it does
display: flex;	Turns the element into a flex container (one-dimensional layout).
counter-reset: step;	Starts a CSS counter.
flex: 1;	All items share free space equally.
text-align: center;	Centres inline content such as text.
position: relative;	Keeps normal flow but becomes the reference for absolutely positioned children.
font-size: .9rem;	Size of the text.
counter-increment: step;	Adds one to the counter for each matching element.
content: counter(step);	The text or empty string for a pseudo-element.
position: absolute;	Removes the element from flow and positions it relative to the nearest positioned ancestor.
translate: -50% 0;	Moves the element without affecting the layout of others.
border-radius: 50%;	Turns a square into a circle.
background: var(--line);	Background colour or image.
display: grid;	Turns the element into a grid container.
place-items: center;	Centres items horizontally and vertically in a grid.
font-weight: 700;	Thickness of the text.
.steps li::after {	Generated content inserted after the element's content.
width: 100%;	Fills the container width.
z-index: -1;	Stacking order for positioned elements; higher is on top.

Declaration	What it does
.steps li:first-child::after {	The first child of its parent.
display: none;	Removes the element from rendering completely.
accent-color: var(--brand);	Colours native checkboxes, radios, progress and range controls.

Check your work

- Numbers generated by CSS, not typed
- Lines sit behind circles
- Current step announced with aria-current
- Progress has a label

Exercises

1. Animate the progress bar value with a transition on width (custom bar).
2. Make the tracker vertical on narrow screens.
3. Add estimated times under each step.

translate: -50% 0;	Moves the element without affecting the layout of others.
border-radius: 50%;	Turns a square into a circle.
background: var(--line);	Background colour or image.
display: grid;	Turns the element into a grid container.
place-items: center;	Centres items horizontally and vertically in a grid.
font-weight: 700;	Thickness of the text.
.steps li::after {	Generated content inserted after the element's content.
width: 100%;	Fills the container width.
z-index: -1;	Stacking order for positioned elements; higher is on top.

Declaration	What it does
.steps li:first-child::after {	The first child of its parent.
display: none;	Removes the element from rendering completely.
accent-color: var(--brand);	Colours native checkboxes, radios, progress and range controls.

Check your work

- Numbers generated by CSS, not typed
- Lines sit behind circles
- Current step announced with aria-current
- Progress has a label

Exercises

1. Animate the progress bar value with a transition on width (custom bar).
2. Make the tracker vertical on narrow screens.
3. Add estimated times under each step.

Theme data for this project

Field	Value
Business	Nile Bakery
Tagline	Fresh bread and pastries every morning
City	Cairo
Owner	Sara Adel
Brand colour	#a0522d
Accent colour	#fff6ec
Offers	Sourdough loaf (60 EGP); Croissant (35 EGP); Date cookies (80 EGP); Baklava box (220 EGP)

Project 728: Order progress tracker for Pyramid Fitness

Theme: Pyramid Fitness (6th of October) | Level 3 | Files: index.html, styles.css

Brief

Show order status as a numbered step indicator built with CSS counters and pseudo-elements, plus native progress and meter elements.

Learning goals

- Use counter-reset and counter-increment
- Use progress and meter
- Build connector lines with ::after

Elements and CSS used

HTML elements	CSS features
ol, li, progress, meter, label, strong	counter-reset, counter(), ::before/::after, translate, accent-color, z-index

Build guide

1. Write the ol with classes done/current and aria-current="step".
2. Add progress and meter elements with values.
3. Flex the list; each li gets equal width.
4. Number the circles with counters in ::before.
5. Draw connector lines with ::after.
6. Colour completed steps and the progress bar with accent-color.

Project 728: index.html

```

Project 728 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Pyramid Fitness - Order status</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
Your order	The main heading; only one per page.
Order 1042: Morning yoga	A paragraph of text.
<ol class="steps">	Ordered (numbered) list; the order matters.
<li class="done">Received	One list item.
<li class="current" aria-current="step">On the way	Tells assistive technology which item is the current page or step.
<label for="p">Progress</label>	Text label for a control; for matches the control's id, or the label wraps the control.

Line	What it does
<progress id="p" value="3" max="4">75%</progress>	Progress of a task.
Rating so far	Second-level heading for a section.
<meter value="4.8" min="0" max="5" low="2" high="4" optimum="5">4.8...	A measurement within a known range.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #0f766e;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 40rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
list-style: none;	Removes bullets or numbers from a list.

Declaration	What it does
display: flex;	Turns the element into a flex container (one-dimensional layout).
counter-reset: step;	Starts a CSS counter.
flex: 1;	All items share free space equally.
text-align: center;	Centres inline content such as text.
position: relative;	Keeps normal flow but becomes the reference for absolutely positioned children.
font-size: .9rem;	Size of the text.
counter-increment: step;	Adds one to the counter for each matching element.
content: counter(step);	The text or empty string for a pseudo-element.
position: absolute;	Removes the element from flow and positions it relative to the nearest positioned ancestor.
translate: -50% 0;	Moves the element without affecting the layout of others.
border-radius: 50%;	Turns a square into a circle.
background: var(--line);	Background colour or image.
display: grid;	Turns the element into a grid container.
place-items: center;	Centres items horizontally and vertically in a grid.
font-weight: 700;	Thickness of the text.
.steps li::after {	Generated content inserted after the element's content.
width: 100%;	Fills the container width.
z-index: -1;	Stacking order for positioned elements; higher is on top.

Declaration	What it does
.steps li:first-child::after {	The first child of its parent.
display: none;	Removes the element from rendering completely.
accent-color: var(--brand);	Colours native checkboxes, radios, progress and range controls.

Check your work

Project 731 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Lotus Language School - Order status</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
Your order	The main heading; only one per page.
Order 1042: English A1	A paragraph of text.
<ol class="steps">	Ordered (numbered) list; the order matters.
<li class="done">Received	One list item.
<li class="current" aria-current="step">On the way	Tells assistive technology which item is the current page or step.
<label for="p">Progress</label>	Text label for a control; for matches the control's id, or the label wraps the control.

Line	What it does
<progress id="p" value="3" max="4">75%</progress>	Progress of a task.
Rating so far	Second-level heading for a section.
<meter value="4.8" min="0" max="5" low="2" high="4" optimum="5">4.8...	A measurement within a known range.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #7c3aed;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 40rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
list-style: none;	Removes bullets or numbers from a list.

Declaration	What it does
display: flex;	Turns the element into a flex container (one-dimensional layout).
counter-reset: step;	Starts a CSS counter.
flex: 1;	All items share free space equally.
text-align: center;	Centres inline content such as text.
position: relative;	Keeps normal flow but becomes the reference for absolutely positioned children.
font-size: .9rem;	Size of the text.
counter-increment: step;	Adds one to the counter for each matching element.
content: counter(step);	The text or empty string for a pseudo-element.
position: absolute;	Removes the element from flow and positions it relative to the nearest positioned ancestor.
translate: -50% 0;	Moves the element without affecting the layout of others.
border-radius: 50%;	Turns a square into a circle.
background: var(--line);	Background colour or image.
display: grid;	Turns the element into a grid container.
place-items: center;	Centres items horizontally and vertically in a grid.
font-weight: 700;	Thickness of the text.
.steps li::after {	Generated content inserted after the element's content.
width: 100%;	Fills the container width.
z-index: -1;	Stacking order for positioned elements; higher is on top.

Declaration	What it does
.steps li:first-child::after {	The first child of its parent.
display: none;	Removes the element from rendering completely.
accent-color: var(--brand);	Colours native checkboxes, radios, progress and range controls.

Check your work

- Numbers generated by CSS, not typed
- Lines sit behind circles
- Current step announced with aria-current
- Progress has a label

Exercises

1. Animate the progress bar value with a transition on width (custom bar).
2. Make the tracker vertical on narrow screens.
3. Add estimated times under each step.

Theme data for this project

Field	Value
Business	Lotus Language School
Tagline	Learn English, French and German in small groups
City	Alexandria
Owner	Nour El Din
Brand colour	#7c3aed
Accent colour	#f5f3ff
Offers	English A1 (1800 EGP); French B1 (2200 EGP); German A2 (2000 EGP); IELTS preparation (3000 EGP)

Project 732: Order progress tracker for Green Leaf Cafe

Theme: Green Leaf Cafe (Zamalek) | Level 3 | Files: index.html, styles.css

Brief

Show order status as a numbered step indicator built with CSS counters and pseudo-elements, plus native progress and meter elements.

Learning goals

- Use counter-reset and counter-increment
- Use progress and meter
- Build connector lines with ::after

Elements and CSS used

HTML elements	CSS features
ol, li, progress, meter, label, strong	counter-reset, counter(), ::before/::after, translate, accent-color, z-index

Build guide

1. Write the ol with classes done/current and aria-current="step".
2. Add progress and meter elements with values.
3. Flex the list; each li gets equal width.
4. Number the circles with counters in ::before.
5. Draw connector lines with ::after.
6. Colour completed steps and the progress bar with accent-color.

Line	What it does
<progress id="p" value="3" max="4">75%</progress>	Progress of a task.
Rating so far	Second-level heading for a section.
<meter value="4.8" min="0" max="5" low="2" high="4" optimum="5">4.8...	A measurement within a known range.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #111827;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 40rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
list-style: none;	Removes bullets or numbers from a list.

Declaration	What it does
display: flex;	Turns the element into a flex container (one-dimensional layout).
counter-reset: step;	Starts a CSS counter.
flex: 1;	All items share free space equally.
text-align: center;	Centres inline content such as text.
position: relative;	Keeps normal flow but becomes the reference for absolutely positioned children.
font-size: .9rem;	Size of the text.
counter-increment: step;	Adds one to the counter for each matching element.
content: counter(step);	The text or empty string for a pseudo-element.
position: absolute;	Removes the element from flow and positions it relative to the nearest positioned ancestor.
translate: -50% 0;	Moves the element without affecting the layout of others.
border-radius: 50%;	Turns a square into a circle.
background: var(--line);	Background colour or image.
display: grid;	Turns the element into a grid container.
place-items: center;	Centres items horizontally and vertically in a grid.
font-weight: 700;	Thickness of the text.
.steps li::after {	Generated content inserted after the element's content.
width: 100%;	Fills the container width.
z-index: -1;	Stacking order for positioned elements; higher is on top.

Declaration	What it does
.steps li:first-child::after {	The first child of its parent.
display: none;	Removes the element from rendering completely.
accent-color: var(--brand);	Colours native checkboxes, radios, progress and range controls.

Check your work

- Numbers generated by CSS, not typed
- Lines sit behind circles
- Current step announced with aria-current
- Progress has a label

Exercises

1. Animate the progress bar value with a transition on width (custom bar).
2. Make the tracker vertical on narrow screens.
3. Add estimated times under each step.

Theme data for this project

Field	Value
Business	Horizon Photography
Tagline	Portraits, weddings and product photography
City	Maadi
Owner	Adham Nabil
Brand colour	#111827
Accent colour	#f3f4f6
Offers	Portrait session (1200 EGP); Wedding day (15000 EGP); Product shoot (900 EGP); Family session (1500 EGP)

Project 735: Order progress tracker for Papyrus Stationery

Theme: Papyrus Stationery (Heliopolis) | Level 3 | Files: index.html, styles.css

Brief

Show order status as a numbered step indicator built with CSS counters and pseudo-elements, plus native progress and meter elements.

Learning goals

- Use counter-reset and counter-increment
- Use progress and meter
- Build connector lines with ::after

Elements and CSS used

HTML elements	CSS features
ol, li, progress, meter, label, strong	counter-reset, counter(), ::before/::after, translate, accent-color, z-index

Build guide

1. Write the ol with classes done/current and aria-current="step".
2. Add progress and meter elements with values.
3. Flex the list; each li gets equal width.
4. Number the circles with counters in ::before.
5. Draw connector lines with ::after.
6. Colour completed steps and the progress bar with accent-color.

Project 735: index.html

```

Project 738: Order progress tracker for Byte Repair

Theme: Byte Repair (Nasr City) | Level 3 | Files: index.html, styles.css

Brief

Show order status as a numbered step indicator built with CSS counters and pseudo-elements, plus native progress and meter elements.

Learning goals

- Use counter-reset and counter-increment
- Use progress and meter
- Build connector lines with ::after

Elements and CSS used

HTML elements	CSS features
ol, li, progress, meter, label, strong	counter-reset, counter(), ::before/::after, translate, accent-color, z-index

Build guide

1. Write the ol with classes done/current and aria-current="step".
2. Add progress and meter elements with values.
3. Flex the list; each li gets equal width.
4. Number the circles with counters in ::before.
5. Draw connector lines with ::after.
6. Colour completed steps and the progress bar with accent-color.

Project 738: index.html

```
<!DOCTYPE html>

Project 738 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Byte Repair - Order status</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
Your order	The main heading; only one per page.
Order 1042: Screen replacement	A paragraph of text.
<ol class="steps">	Ordered (numbered) list; the order matters.
<li class="done">Received	One list item.
<li class="current" aria-current="step">On the way	Tells assistive technology which item is the current page or step.
<label for="p">Progress</label>	Text label for a control; for matches the control's id, or the label wraps the control.

Line	What it does
<progress id="p" value="3" max="4">75%</progress>	Progress of a task.
Rating so far	Second-level heading for a section.
<meter value="4.8" min="0" max="5" low="2" high="4" optimum="5">4.8...	A measurement within a known range.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #0891b2;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 40rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
list-style: none;	Removes bullets or numbers from a list.

Declaration	What it does
display: flex;	Turns the element into a flex container (one-dimensional layout).
counter-reset: step;	Starts a CSS counter.
flex: 1;	All items share free space equally.
text-align: center;	Centres inline content such as text.
position: relative;	Keeps normal flow but becomes the reference for absolutely positioned children.
font-size: .9rem;	Size of the text.
counter-increment: step;	Adds one to the counter for each matching element.
content: counter(step);	The text or empty string for a pseudo-element.
position: absolute;	Removes the element from flow and positions it relative to the nearest positioned ancestor.
translate: -50% 0;	Moves the element without affecting the layout of others.
border-radius: 50%;	Turns a square into a circle.
background: var(--line);	Background colour or image.
display: grid;	Turns the element into a grid container.
place-items: center;	Centres items horizontally and vertically in a grid.
font-weight: 700;	Thickness of the text.
.steps li::after {	Generated content inserted after the element's content.
width: 100%;	Fills the container width.
z-index: -1;	Stacking order for positioned elements; higher is on top.

Declaration	What it does
.steps li:first-child::after {	The first child of its parent.
display: none;	Removes the element from rendering completely.
accent-color: var(--brand);	Colours native checkboxes, radios, progress and range controls.

Check your work

- Numbers generated by CSS, not typed
- Lines sit behind circles
- Current step announced with aria-current
- Progress has a label

Exercises

1. Animate the progress bar value with a transition on width (custom bar).
2. Make the tracker vertical on narrow screens.
3. Add estimated times under each step.

Theme data for this project

Field	Value
Business	Byte Repair
Tagline	Phone and laptop repairs while you wait
City	Nasr City
Owner	Mostafa Gamal
Brand colour	#0891b2
Accent colour	#ecfeff
Offers	Screen replacement (From 800 EGP); Battery swap (From 500 EGP); Laptop cleaning (350 EGP); Data recovery (From 1200 EGP)

Project 739: Order progress tracker for Sahara Pet Care

Theme: Sahara Pet Care (New Cairo) | Level 3 | Files: index.html, styles.css

Brief

Show order status as a numbered step indicator built with CSS counters and pseudo-elements, plus native progress and meter elements.

Learning goals

- Use counter-reset and counter-increment
- Use progress and meter
- Build connector lines with ::after

Elements and CSS used

HTML elements	CSS features
ol, li, progress, meter, label, strong	counter-reset, counter(), ::before/::after, translate, accent-color, z-index

Build guide

1. Write the ol with classes done/current and aria-current="step".
2. Add progress and meter elements with values.
3. Flex the list; each li gets equal width.
4. Number the circles with counters in ::before.
5. Draw connector lines with ::after.
6. Colour completed steps and the progress bar with accent-color.

Project 741 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Habiba Handmade Jewellery - Order status</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
Your order	The main heading; only one per page.
Order 1042: Lotus pendant	A paragraph of text.
<ol class="steps">	Ordered (numbered) list; the order matters.
<li class="done">Received	One list item.
<li class="current" aria-current="step">On the way	Tells assistive technology which item is the current page or step.

Line	What it does
<label for="p">Progress</label>	Text label for a control; for matches the control's id, or the label wraps the control.
<progress id="p" value="3" max="4">75%</progress>	Progress of a task.
Rating so far	Second-level heading for a section.
<meter value="4.8" min="0" max="5" low="2" high="4" optimum="5">4.8...	A measurement within a known range.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #a16207;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 40rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.

Declaration	What it does
list-style: none;	Removes bullets or numbers from a list.
display: flex;	Turns the element into a flex container (one-dimensional layout).
counter-reset: step;	Starts a CSS counter.
flex: 1;	All items share free space equally.
text-align: center;	Centres inline content such as text.
position: relative;	Keeps normal flow but becomes the reference for absolutely positioned children.
font-size: .9rem;	Size of the text.
counter-increment: step;	Adds one to the counter for each matching element.
content: counter(step);	The text or empty string for a pseudo-element.
position: absolute;	Removes the element from flow and positions it relative to the nearest positioned ancestor.
translate: -50% 0;	Moves the element without affecting the layout of others.
border-radius: 50%;	Turns a square into a circle.
background: var(--line);	Background colour or image.
display: grid;	Turns the element into a grid container.
place-items: center;	Centres items horizontally and vertically in a grid.
font-weight: 700;	Thickness of the text.
.steps li::after {	Generated content inserted after the element's content.
width: 100%;	Fills the container width.

Declaration	What it does
z-index: -1;	Stacking order for positioned elements; higher is on top.
.steps li:first-child::after {	The first child of its parent.
display: none;	Removes the element from rendering completely.
accent-color: var(--brand);	Colours native checkboxes, radios, progress and range controls.

Check your work

- Numbers generated by CSS, not typed
- Lines sit behind circles
- Current step announced with aria-current
- Progress has a label

Exercises

1. Animate the progress bar value with a transition on width (custom bar).
2. Make the tracker vertical on narrow screens.
3. Add estimated times under each step.

Theme data for this project

Field	Value
Business	Habiba Handmade Jewellery
Tagline	Silver and brass pieces inspired by Nubia
City	Aswan
Owner	Habiba Saleh
Brand colour	#a16207
Accent colour	#fefce8

Field	Value
Offers	Lotus pendant (650 EGP); Brass cuff (420 EGP); Bead earrings (180 EGP); Ankh ring (300 EGP)

Project 742: Order progress tracker for Fayoum Pottery Studio

Theme: Fayoum Pottery Studio (Tunis Village) | Level 3 | Files: index.html, styles.css

Brief

Show order status as a numbered step indicator built with CSS counters and pseudo-elements, plus native progress and meter elements.

Learning goals

- Use counter-reset and counter-increment
- Use progress and meter
- Build connector lines with ::after

Elements and CSS used

HTML elements	CSS features
ol, li, progress, meter, label, strong	counter-reset, counter(), ::before/::after, translate, accent-color, z-index

Build guide

1. Write the ol with classes done/current and aria-current="step".
2. Add progress and meter elements with values.
3. Flex the list; each li gets equal width.
4. Number the circles with counters in ::before.
5. Draw connector lines with ::after.

6. Colour completed steps and the progress bar with accent-color.

Project 742: index.html

```
<!DOCTYPE html>

list-style: none;	Removes bullets or numbers from a list.

Declaration	What it does
display: flex;	Turns the element into a flex container (one-dimensional layout).
counter-reset: step;	Starts a CSS counter.
flex: 1;	All items share free space equally.
text-align: center;	Centres inline content such as text.
position: relative;	Keeps normal flow but becomes the reference for absolutely positioned children.
font-size: .9rem;	Size of the text.
counter-increment: step;	Adds one to the counter for each matching element.
content: counter(step);	The text or empty string for a pseudo-element.
position: absolute;	Removes the element from flow and positions it relative to the nearest positioned ancestor.
translate: -50% 0;	Moves the element without affecting the layout of others.
border-radius: 50%;	Turns a square into a circle.
background: var(--line);	Background colour or image.
display: grid;	Turns the element into a grid container.
place-items: center;	Centres items horizontally and vertically in a grid.
font-weight: 700;	Thickness of the text.
.steps li::after {	Generated content inserted after the element's content.
width: 100%;	Fills the container width.
z-index: -1;	Stacking order for positioned elements; higher is on top.

Declaration	What it does
.steps li:first-child::after {	The first child of its parent.
display: none;	Removes the element from rendering completely.
accent-color: var(--brand);	Colours native checkboxes, radios, progress and range controls.

Check your work

- Numbers generated by CSS, not typed
- Lines sit behind circles
- Current step announced with aria-current
- Progress has a label

Exercises

1. Animate the progress bar value with a transition on width (custom bar).
2. Make the tracker vertical on narrow screens.
3. Add estimated times under each step.

Theme data for this project

Field	Value
Business	Suez Auto Service
Tagline	Honest car servicing and repairs
City	Suez
Owner	Khaled Nasser
Brand colour	#374151
Accent colour	#f9fafb
Offers	Oil change (600 EGP); Brake pads (1400 EGP); Air conditioning (900 EGP); Pre-purchase inspection (750 EGP)

Project 745: Order progress tracker for Luxor Music Academy

Theme: Luxor Music Academy (Luxor) | Level 3 | Files: index.html, styles.css

Brief

Show order status as a numbered step indicator built with CSS counters and pseudo-elements, plus native progress and meter elements.

Learning goals

- Use counter-reset and counter-increment
- Use progress and meter
- Build connector lines with ::after

Elements and CSS used

HTML elements	CSS features
ol, li, progress, meter, label, strong	counter-reset, counter(), ::before/::after, translate, accent-color, z-index

Build guide

1. Write the ol with classes done/current and aria-current="step".
2. Add progress and meter elements with values.
3. Flex the list; each li gets equal width.
4. Number the circles with counters in ::before.
5. Draw connector lines with ::after.

6. Colour completed steps and the progress bar with accent-color.

Project 745: index.html

```

Project 745 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Luxor Music Academy - Order status</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
Your order	The main heading; only one per page.
Order 1042: Oud for beginners	A paragraph of text.
<ol class="steps">	Ordered (numbered) list; the order matters.
<li class="done">Received	One list item.
<li class="current" aria-current="step">On the way	Tells assistive technology which item is the current page or step.
<label for="p">Progress</label>	Text label for a control; for matches the control's id, or the label wraps the control.

Line	What it does
<progress id="p" value="3" max="4">75%</progress>	Progress of a task.
Rating so far	Second-level heading for a section.
<meter value="4.8" min="0" max="5" low="2" high="4" optimum="5">4.8...	A measurement within a known range.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #4c1d95;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 40rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
list-style: none;	Removes bullets or numbers from a list.

Declaration	What it does
display: flex;	Turns the element into a flex container (one-dimensional layout).
counter-reset: step;	Starts a CSS counter.
flex: 1;	All items share free space equally.
text-align: center;	Centres inline content such as text.
position: relative;	Keeps normal flow but becomes the reference for absolutely positioned children.
font-size: .9rem;	Size of the text.
counter-increment: step;	Adds one to the counter for each matching element.
content: counter(step);	The text or empty string for a pseudo-element.
position: absolute;	Removes the element from flow and positions it relative to the nearest positioned ancestor.
translate: -50% 0;	Moves the element without affecting the layout of others.
border-radius: 50%;	Turns a square into a circle.
background: var(--line);	Background colour or image.
display: grid;	Turns the element into a grid container.
place-items: center;	Centres items horizontally and vertically in a grid.
font-weight: 700;	Thickness of the text.
.steps li::after {	Generated content inserted after the element's content.
width: 100%;	Fills the container width.
z-index: -1;	Stacking order for positioned elements; higher is on top.

Declaration	What it does
.steps li:first-child::after {	The first child of its parent.
display: none;	Removes the element from rendering completely.
accent-color: var(--brand);	Colours native checkboxes, radios, progress and range controls.

Check your work

Project 748 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Nubian Guest House - Order status</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
Your order	The main heading; only one per page.
Order 1042: Garden room	A paragraph of text.
<ol class="steps">	Ordered (numbered) list; the order matters.
<li class="done">Received	One list item.
<li class="current" aria-current="step">On the way	Tells assistive technology which item is the current page or step.
<label for="p">Progress</label>	Text label for a control; for matches the control's id, or the label wraps the control.

Line	What it does
<progress id="p" value="3" max="4">75%</progress>	Progress of a task.
Rating so far	Second-level heading for a section.
<meter value="4.8" min="0" max="5" low="2" high="4" optimum="5">4.8...	A measurement within a known range.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #b45309;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 40rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
list-style: none;	Removes bullets or numbers from a list.

Declaration	What it does
display: flex;	Turns the element into a flex container (one-dimensional layout).
counter-reset: step;	Starts a CSS counter.
flex: 1;	All items share free space equally.
text-align: center;	Centres inline content such as text.
position: relative;	Keeps normal flow but becomes the reference for absolutely positioned children.
font-size: .9rem;	Size of the text.
counter-increment: step;	Adds one to the counter for each matching element.
content: counter(step);	The text or empty string for a pseudo-element.
position: absolute;	Removes the element from flow and positions it relative to the nearest positioned ancestor.
translate: -50% 0;	Moves the element without affecting the layout of others.
border-radius: 50%;	Turns a square into a circle.
background: var(--line);	Background colour or image.
display: grid;	Turns the element into a grid container.
place-items: center;	Centres items horizontally and vertically in a grid.
font-weight: 700;	Thickness of the text.
.steps li::after {	Generated content inserted after the element's content.
width: 100%;	Fills the container width.
z-index: -1;	Stacking order for positioned elements; higher is on top.

Declaration	What it does
.steps li:first-child::after {	The first child of its parent.
display: none;	Removes the element from rendering completely.
accent-color: var(--brand);	Colours native checkboxes, radios, progress and range controls.

Check your work

- Numbers generated by CSS, not typed
- Lines sit behind circles
- Current step announced with aria-current
- Progress has a label

Exercises

1. Animate the progress bar value with a transition on width (custom bar).
2. Make the tracker vertical on narrow screens.
3. Add estimated times under each step.

Theme data for this project

Field	Value
Business	Nubian Guest House
Tagline	Colourful rooms on the west bank of the Nile
City	Aswan
Owner	Fatma Hassan
Brand colour	#b45309
Accent colour	#fffbeb
Offers	Garden room (900 EGP); Nile view suite (1800 EGP); Family room (1500 EGP); Rooftop dorm (300 EGP)

Project 749: Order progress tracker for Ismailia Cycling Store

Theme: Ismailia Cycling Store (Ismailia) | Level 3 | Files: index.html, styles.css

Brief

Show order status as a numbered step indicator built with CSS counters and pseudo-elements, plus native progress and meter elements.

Learning goals

- Use counter-reset and counter-increment
- Use progress and meter
- Build connector lines with ::after

Elements and CSS used

HTML elements	CSS features
ol, li, progress, meter, label, strong	counter-reset, counter(), ::before/::after, translate, accent-color, z-index

Build guide

1. Write the ol with classes done/current and aria-current="step".
2. Add progress and meter elements with values.
3. Flex the list; each li gets equal width.
4. Number the circles with counters in ::before.
5. Draw connector lines with ::after.

6. Colour completed steps and the progress bar with accent-color.

Brand colour	#2563eb
Accent colour	#eff6ff
Offers	HTML weekend (Free); CSS art (Free); Scratch games (Free); Hackathon (Free)

Project type: Split-screen feature section

Level 2 | 25 projects, one per theme

Create a full-height section with text on one half and a photo filling the other half, stacking on small screens.

Project 751: Split-screen feature section for Cairo Book Shop

Theme: Cairo Book Shop (Giza) | Level 2 | Files: index.html, styles.css

Brief

Create a full-height section with text on one half and a photo filling the other half, stacking on small screens.

Learning goals

- Fill a grid cell with an image using object-fit
- Vertically centre content with align-content
- Use clamp() for fluid padding

Elements and CSS used

HTML elements	CSS features
main, div, p, h1, strong, ul, li, a, img	grid-template-columns: 1fr 1fr, object-fit: cover, align-content: center, clamp(), ::before content

Build guide

1. Write the text block and the image as the two children of .split.
2. Grid with one column by default, two above 800px.
3. Give the image height 100% and object-fit: cover.
4. Centre the text vertically with align-content.
5. Add tick marks to the list with ::before.
6. Use clamp() for padding.

Project 751: index.html

```
<!DOCTYPE html>

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #b90000;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
min-height: 100vh;	At least as tall as the viewport.
display: grid;	Turns the element into a grid container.
grid-template-columns: 1fr;	Defines the columns of the grid.
padding: clamp(1.5rem, 5vw, 4rem);	Space inside the element between its border and content.
align-content: center;	Centres the lines of a multi-line flex or grid container.

Declaration	What it does
gap: 1rem;	Space between grid or flex items without extra margins.
width: 100%;	Fills the container width.
object-fit: cover;	Crops an image to fill its box while keeping its proportions.
@media (min-width: 800px) { .split { grid-template-columns: 1fr 1fr...	Applies from the given width upwards (mobile-first breakpoint).
text-transform: uppercase;	Displays text in capitals without changing the HTML.
letter-spacing: .1em;	Adds space between letters; useful for small capitals.
font-weight: 700;	Thickness of the text.
font-size: clamp(2rem, 4vw, 3rem);	A fluid value between a minimum and a maximum, based on the middle expression.
list-style: none;	Removes bullets or numbers from a list.
content: "\2713 ";	The text or empty string for a pseudo-element.
background: var(--brand);	Background colour or image.
border-radius: 999px;	Fully rounded pill shape.
text-decoration: none;	Removes the underline from links.

Check your work

- Image never distorts
- Text stays readable width
- Stacks on mobile with image below
- Button aligned left, not stretched

Exercises

1. Swap the sides with order or direction: rtl.
2. Add a second split section with the image on the left.
3. Use a background video instead of the image.

Theme data for this project

Field	Value
Business	Cairo Book Shop
Tagline	PDF and printed books about web development
City	Giza
Owner	Mohamed Khattab
Brand colour	#b90000
Accent colour	#f4f1ea
Offers	Learn HTML (120 EGP); CSS in Practice (150 EGP); JavaScript Basics (180 EGP); Web Accessibility (95 EGP)

Project 752: Split-screen feature section for Nile Bakery

Theme: Nile Bakery (Cairo) | Level 2 | Files: index.html, styles.css

Brief

Create a full-height section with text on one half and a photo filling the other half, stacking on small screens.

Learning goals

- Fill a grid cell with an image using object-fit
- Vertically centre content with align-content
- Use clamp() for fluid padding

Elements and CSS used

HTML elements	CSS features
main, div, p, h1, strong, ul, li, a, img	grid-template-columns: 1fr 1fr, object-fit: cover, align-content: center, clamp(), ::before content

Build guide

1. Write the text block and the image as the two children of .split.
2. Grid with one column by default, two above 800px.
3. Give the image height 100% and object-fit: cover.
4. Centre the text vertically with align-content.
5. Add tick marks to the list with ::before.
6. Use clamp() for padding.

Project 752: index.html

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="utf-8">

Project 755 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Red Sea Travel - Luxor day trip</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main class="split">	The unique content of this page; exactly one per page.
	Generic block container for grouping and layout.
Tour of the month	A paragraph of text.
Luxor day trip	The main heading; only one per page.
Karnak, Valley of the Kings. Available now at Red Sea Travel in ...	Strong importance (bold by default).
<ul class="ticks">	Unordered (bulleted) list.
Made with care	One list item.
Ask about it	A link styled as a button; it navigates, so it is a link and not a <button>.

Line	What it does
<img src="images/travel-1.jpg" alt="Luxor day trip" width="900" hei...	An image; alt describes it, width and height reserve space before it loads.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #0369a1;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
min-height: 100vh;	At least as tall as the viewport.
display: grid;	Turns the element into a grid container.
grid-template-columns: 1fr;	Defines the columns of the grid.
padding: clamp(1.5rem, 5vw, 4rem);	Space inside the element between its border and content.
align-content: center;	Centres the lines of a multi-line flex or grid container.

Declaration	What it does
gap: 1rem;	Space between grid or flex items without extra margins.
width: 100%;	Fills the container width.
object-fit: cover;	Crops an image to fill its box while keeping its proportions.
@media (min-width: 800px) { .split { grid-template-columns: 1fr 1fr...	Applies from the given width upwards (mobile-first breakpoint).
text-transform: uppercase;	Displays text in capitals without changing the HTML.
letter-spacing: .1em;	Adds space between letters; useful for small capitals.
font-weight: 700;	Thickness of the text.
font-size: clamp(2rem, 4vw, 3rem);	A fluid value between a minimum and a maximum, based on the middle expression.
list-style: none;	Removes bullets or numbers from a list.
content: "\2713 ";	The text or empty string for a pseudo-element.
background: var(--brand);	Background colour or image.
border-radius: 999px;	Fully rounded pill shape.
text-decoration: none;	Removes the underline from links.

Check your work

- Image never distorts
- Text stays readable width
- Stacks on mobile with image below
- Button aligned left, not stretched

Exercises

1. Swap the sides with order or direction: rtl.
2. Add a second split section with the image on the left.
3. Use a background video instead of the image.

Theme data for this project

Field	Value
Business	Red Sea Travel
Tagline	Discover Egypt from desert to reef
City	Hurghada
Owner	Laila Mansour
Brand colour	#0369a1
Accent colour	#f0f9ff
Offers	Luxor day trip (1200 EGP); Snorkelling (700 EGP); Desert safari (900 EGP); Nile cruise (6500 EGP)

Project 756: Split-screen feature section for Lotus Language School

Theme: Lotus Language School (Alexandria) | Level 2 | Files: index.html, styles.css

Brief

Create a full-height section with text on one half and a photo filling the other half, stacking on small screens.

Learning goals

- Fill a grid cell with an image using object-fit
- Vertically centre content with align-content
- Use clamp() for fluid padding

Elements and CSS used

HTML elements	CSS features
main, div, p, h1, strong, ul, li, a, img	grid-template-columns: 1fr 1fr, object-fit: cover, align-content: center, clamp(), ::before content

Build guide

1. Write the text block and the image as the two children of .split.
2. Grid with one column by default, two above 800px.
3. Give the image height 100% and object-fit: cover.
4. Centre the text vertically with align-content.
5. Add tick marks to the list with ::before.
6. Use clamp() for padding.

Project 756: index.html

```
<!DOCTYPE html>

line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
min-height: 100vh;	At least as tall as the viewport.
display: grid;	Turns the element into a grid container.
grid-template-columns: 1fr;	Defines the columns of the grid.
padding: clamp(1.5rem, 5vw, 4rem);	Space inside the element between its border and content.

Declaration	What it does
align-content: center;	Centres the lines of a multi-line flex or grid container.
gap: 1rem;	Space between grid or flex items without extra margins.
width: 100%;	Fills the container width.
object-fit: cover;	Crops an image to fill its box while keeping its proportions.
@media (min-width: 800px) { .split { grid-template-columns: 1fr 1fr...	Applies from the given width upwards (mobile-first breakpoint).
text-transform: uppercase;	Displays text in capitals without changing the HTML.
letter-spacing: .1em;	Adds space between letters; useful for small capitals.
font-weight: 700;	Thickness of the text.
font-size: clamp(2rem, 4vw, 3rem);	A fluid value between a minimum and a maximum, based on the middle expression.
list-style: none;	Removes bullets or numbers from a list.
content: "\2713 ";	The text or empty string for a pseudo-element.
background: var(--brand);	Background colour or image.
border-radius: 999px;	Fully rounded pill shape.
text-decoration: none;	Removes the underline from links.

Check your work

- Image never distorts
- Text stays readable width
- Stacks on mobile with image below

- Button aligned left, not stretched

Exercises

1. Swap the sides with order or direction: rtl.
2. Add a second split section with the image on the left.
3. Use a background video instead of the image.

Theme data for this project

Field	Value
Business	Sinai Trekking Club
Tagline	Guided mountain walks for every level
City	Saint Catherine
Owner	Yara Hamdy
Brand colour	#92400e
Accent colour	#fffbeb
Offers	Mount Sinai sunrise (400 EGP); Blue Desert loop (250 EGP); Wadi Gnai (300 EGP); Three-day traverse (1900 EGP)

Project 759: Split-screen feature section for Horizon Photography

Theme: Horizon Photography (Maadi) | Level 2 | Files: index.html, styles.css

Brief

Create a full-height section with text on one half and a photo filling the other half, stacking on small screens.

Learning goals

- Fill a grid cell with an image using object-fit
- Vertically centre content with align-content
- Use clamp() for fluid padding

Elements and CSS used

HTML elements	CSS features
main, div, p, h1, strong, ul, li, a, img	grid-template-columns: 1fr 1fr, object-fit: cover, align-content: center, clamp(), ::before content

Build guide

1. Write the text block and the image as the two children of .split.
2. Grid with one column by default, two above 800px.
3. Give the image height 100% and object-fit: cover.
4. Centre the text vertically with align-content.
5. Add tick marks to the list with ::before.
6. Use clamp() for padding.

Project 759: index.html

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1">
  <title>Horizon Photography - Portrait session</title>
  <link rel="stylesheet" href="styles.css">
</head>
<body>
  <main class="split">
    <div class="text">
      <p class="kicker">Session of the month</p>
      <h1>Portrait session</h1>
      <p>One hour, 20 edited photos. Available now at Horizon
Photography in Maadi for <strong>1200 EGP</strong>.</p>
      <ul class="ticks">
        <li>Made with care</li>
        <li>Satisfaction guaranteed</li>

Project 762 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Cedar Furniture - Oak dining table</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main class="split">	The unique content of this page; exactly one per page.
	Generic block container for grouping and layout.
Piece of the month	A paragraph of text.
Oak dining table	The main heading; only one per page.
Seats six. Available now at Cedar Furniture in Damietta for <str...	Strong importance (bold by default).
<ul class="ticks">	Unordered (bulleted) list.
Made with care	One list item.
Ask about it	A link styled as a button; it navigates, so it is a link and not a <button>.

Line	What it does
<img src="images/furniture-1.jpg" alt="Oak dining table" width="900...	An image; alt describes it, width and height reserve space before it loads.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #78350f;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
min-height: 100vh;	At least as tall as the viewport.
display: grid;	Turns the element into a grid container.
grid-template-columns: 1fr;	Defines the columns of the grid.
padding: clamp(1.5rem, 5vw, 4rem);	Space inside the element between its border and content.
align-content: center;	Centres the lines of a multi-line flex or grid container.

Declaration	What it does
gap: 1rem;	Space between grid or flex items without extra margins.
width: 100%;	Fills the container width.
object-fit: cover;	Crops an image to fill its box while keeping its proportions.
@media (min-width: 800px) { .split { grid-template-columns: 1fr 1fr...	Applies from the given width upwards (mobile-first breakpoint).
text-transform: uppercase;	Displays text in capitals without changing the HTML.
letter-spacing: .1em;	Adds space between letters; useful for small capitals.
font-weight: 700;	Thickness of the text.
font-size: clamp(2rem, 4vw, 3rem);	A fluid value between a minimum and a maximum, based on the middle expression.
list-style: none;	Removes bullets or numbers from a list.
content: "\2713 ";	The text or empty string for a pseudo-element.
background: var(--brand);	Background colour or image.
border-radius: 999px;	Fully rounded pill shape.
text-decoration: none;	Removes the underline from links.

Check your work

- Image never distorts
- Text stays readable width
- Stacks on mobile with image below
- Button aligned left, not stretched

Exercises

1. Swap the sides with order or direction: rtl.
2. Add a second split section with the image on the left.
3. Use a background video instead of the image.

Theme data for this project

Field	Value
Business	Cedar Furniture
Tagline	Solid wood furniture made to order
City	Damietta
Owner	Tarek Lotfy
Brand colour	#78350f
Accent colour	#fef3c7
Offers	Oak dining table (9500 EGP); Bookshelf (4200 EGP); Bedside table (1500 EGP); Coffee table (2800 EGP)

Project 763: Split-screen feature section for Byte Repair

Theme: Byte Repair (Nasr City) | Level 2 | Files: index.html, styles.css

Brief

Create a full-height section with text on one half and a photo filling the other half, stacking on small screens.

Learning goals

- Fill a grid cell with an image using object-fit
- Vertically centre content with align-content
- Use clamp() for fluid padding

Elements and CSS used

HTML elements	CSS features
main, div, p, h1, strong, ul, li, a, img	grid-template-columns: 1fr 1fr, object-fit: cover, align-content: center, clamp(), ::before content

Build guide

1. Write the text block and the image as the two children of .split.
2. Grid with one column by default, two above 800px.
3. Give the image height 100% and object-fit: cover.
4. Centre the text vertically with align-content.
5. Add tick marks to the list with ::before.
6. Use clamp() for padding.

Project 763: index.html

```
<!DOCTYPE html>

text-decoration: none;	Removes the underline from links.

Check your work

- Image never distorts
- Text stays readable width
- Stacks on mobile with image below
- Button aligned left, not stretched

Exercises

1. Swap the sides with order or direction: rtl.
2. Add a second split section with the image on the left.
3. Use a background video instead of the image.

Theme data for this project

Field	Value
Business	Alexandria Sailing School
Tagline	Learn to sail on the Mediterranean
City	Alexandria
Owner	Amr Selim
Brand colour	#1e40af
Accent colour	#eff6ff
Offers	Taster session (500 EGP); Beginner course (2200 EGP); Racing clinic (1800 EGP); Private lesson (900 EGP)

Project 766: Split-screen feature section for Habiba Handmade Jewellery

Theme: Habiba Handmade Jewellery (Aswan) | Level 2 | Files: index.html, styles.css

Brief

Create a full-height section with text on one half and a photo filling the other half, stacking on small screens.

Learning goals

- Fill a grid cell with an image using object-fit
- Vertically centre content with align-content
- Use clamp() for fluid padding

Elements and CSS used

HTML elements	CSS features
main, div, p, h1, strong, ul, li, a, img	grid-template-columns: 1fr 1fr, object-fit: cover, align-content: center, clamp(), ::before content

Build guide

1. Write the text block and the image as the two children of .split.
2. Grid with one column by default, two above 800px.
3. Give the image height 100% and object-fit: cover.
4. Centre the text vertically with align-content.
5. Add tick marks to the list with ::before.
6. Use clamp() for padding.

Project 766: index.html

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="utf-8">

Project 766 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Habiba Handmade Jewellery - Lotus pendant</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main class="split">	The unique content of this page; exactly one per page.
	Generic block container for grouping and layout.
Item of the month	A paragraph of text.
Lotus pendant	The main heading; only one per page.
Sterling silver. Available now at Habiba Handmade Jewellery in A...	Strong importance (bold by default).
<ul class="ticks">	Unordered (bulleted) list.
Made with care	One list item.

Line	What it does
Ask about it	A link styled as a button; it navigates, so it is a link and not a <button>.
<img src="images/jewellery-1.jpg" alt="Lotus pendant" width="900" h...	An image; alt describes it, width and height reserve space before it loads.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #a16207;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
min-height: 100vh;	At least as tall as the viewport.
display: grid;	Turns the element into a grid container.
grid-template-columns: 1fr;	Defines the columns of the grid.
padding: clamp(1.5rem, 5vw, 4rem);	Space inside the element between its border and content.

Declaration	What it does
align-content: center;	Centres the lines of a multi-line flex or grid container.
gap: 1rem;	Space between grid or flex items without extra margins.
width: 100%;	Fills the container width.
object-fit: cover;	Crops an image to fill its box while keeping its proportions.
@media (min-width: 800px) { .split { grid-template-columns: 1fr 1fr...	Applies from the given width upwards (mobile-first breakpoint).
text-transform: uppercase;	Displays text in capitals without changing the HTML.
letter-spacing: .1em;	Adds space between letters; useful for small capitals.
font-weight: 700;	Thickness of the text.
font-size: clamp(2rem, 4vw, 3rem);	A fluid value between a minimum and a maximum, based on the middle expression.
list-style: none;	Removes bullets or numbers from a list.
content: "\2713 ";	The text or empty string for a pseudo-element.
background: var(--brand);	Background colour or image.
border-radius: 999px;	Fully rounded pill shape.
text-decoration: none;	Removes the underline from links.

Check your work

- Image never distorts
- Text stays readable width
- Stacks on mobile with image below

- Button aligned left, not stretched

Exercises

1. Swap the sides with order or direction: rtl.
2. Add a second split section with the image on the left.
3. Use a background video instead of the image.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #374151;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
min-height: 100vh;	At least as tall as the viewport.
display: grid;	Turns the element into a grid container.
grid-template-columns: 1fr;	Defines the columns of the grid.
padding: clamp(1.5rem, 5vw, 4rem);	Space inside the element between its border and content.
align-content: center;	Centres the lines of a multi-line flex or grid container.

Declaration	What it does
gap: 1rem;	Space between grid or flex items without extra margins.
width: 100%;	Fills the container width.
object-fit: cover;	Crops an image to fill its box while keeping its proportions.
@media (min-width: 800px) { .split { grid-template-columns: 1fr 1fr...	Applies from the given width upwards (mobile-first breakpoint).
text-transform: uppercase;	Displays text in capitals without changing the HTML.
letter-spacing: .1em;	Adds space between letters; useful for small capitals.
font-weight: 700;	Thickness of the text.
font-size: clamp(2rem, 4vw, 3rem);	A fluid value between a minimum and a maximum, based on the middle expression.
list-style: none;	Removes bullets or numbers from a list.
content: "\2713 ";	The text or empty string for a pseudo-element.
background: var(--brand);	Background colour or image.
border-radius: 999px;	Fully rounded pill shape.
text-decoration: none;	Removes the underline from links.

Check your work

- Image never distorts
- Text stays readable width
- Stacks on mobile with image below
- Button aligned left, not stretched

Exercises

1. Swap the sides with order or direction: rtl.
2. Add a second split section with the image on the left.
3. Use a background video instead of the image.

Theme data for this project

Field	Value
Business	Suez Auto Service
Tagline	Honest car servicing and repairs
City	Suez
Owner	Khaled Nasser
Brand colour	#374151
Accent colour	#f9fafb
Offers	Oil change (600 EGP); Brake pads (1400 EGP); Air conditioning (900 EGP); Pre-purchase inspection (750 EGP)

Project 770: Split-screen feature section for Luxor Music Academy

Theme: Luxor Music Academy (Luxor) | Level 2 | Files: index.html, styles.css

Brief

Create a full-height section with text on one half and a photo filling the other half, stacking on small screens.

Learning goals

- Fill a grid cell with an image using object-fit
- Vertically centre content with align-content
- Use clamp() for fluid padding

Elements and CSS used

HTML elements	CSS features
main, div, p, h1, strong, ul, li, a, img	grid-template-columns: 1fr 1fr, object-fit: cover, align-content: center, clamp(), ::before content

Build guide

1. Write the text block and the image as the two children of .split.
2. Grid with one column by default, two above 800px.
3. Give the image height 100% and object-fit: cover.
4. Centre the text vertically with align-content.
5. Add tick marks to the list with ::before.
6. Use clamp() for padding.

Project 770: index.html

```
<!DOCTYPE html>

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Nubian Guest House - Garden room</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main class="split">	The unique content of this page; exactly one per page.
	Generic block container for grouping and layout.
Room of the month	A paragraph of text.
Garden room	The main heading; only one per page.
Double bed, shared terrace. Available now at Nubian Guest House ...	Strong importance (bold by default).
<ul class="ticks">	Unordered (bulleted) list.
Made with care	One list item.
Ask about it	A link styled as a button; it navigates, so it is a link and not a <button>.

Line	What it does
<img src="images/guesthouse-1.jpg" alt="Garden room" width="900" he...	An image; alt describes it, width and height reserve space before it loads.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #b45309;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
min-height: 100vh;	At least as tall as the viewport.
display: grid;	Turns the element into a grid container.
grid-template-columns: 1fr;	Defines the columns of the grid.
padding: clamp(1.5rem, 5vw, 4rem);	Space inside the element between its border and content.
align-content: center;	Centres the lines of a multi-line flex or grid container.

Declaration	What it does
gap: 1rem;	Space between grid or flex items without extra margins.
width: 100%;	Fills the container width.
object-fit: cover;	Crops an image to fill its box while keeping its proportions.
@media (min-width: 800px) { .split { grid-template-columns: 1fr 1fr...	Applies from the given width upwards (mobile-first breakpoint).
text-transform: uppercase;	Displays text in capitals without changing the HTML.
letter-spacing: .1em;	Adds space between letters; useful for small capitals.
font-weight: 700;	Thickness of the text.
font-size: clamp(2rem, 4vw, 3rem);	A fluid value between a minimum and a maximum, based on the middle expression.
list-style: none;	Removes bullets or numbers from a list.
content: "\2713 ";	The text or empty string for a pseudo-element.
background: var(--brand);	Background colour or image.
border-radius: 999px;	Fully rounded pill shape.
text-decoration: none;	Removes the underline from links.

Check your work

- Image never distorts
- Text stays readable width
- Stacks on mobile with image below
- Button aligned left, not stretched

Exercises

1. Swap the sides with order or direction: rtl.
2. Add a second split section with the image on the left.
3. Use a background video instead of the image.

Theme data for this project

Field	Value
Business	Nubian Guest House
Tagline	Colourful rooms on the west bank of the Nile
City	Aswan
Owner	Fatma Hassan
Brand colour	#b45309
Accent colour	#fffbeb
Offers	Garden room (900 EGP); Nile view suite (1800 EGP); Family room (1500 EGP); Rooftop dorm (300 EGP)

Project 774: Split-screen feature section for Ismailia Cycling Store

Theme: Ismailia Cycling Store (Ismailia) | Level 2 | Files: index.html, styles.css

Brief

Create a full-height section with text on one half and a photo filling the other half, stacking on small screens.

Learning goals

- Fill a grid cell with an image using object-fit
- Vertically centre content with align-content
- Use clamp() for fluid padding

Elements and CSS used

HTML elements	CSS features
main, div, p, h1, strong, ul, li, a, img	grid-template-columns: 1fr 1fr, object-fit: cover, align-content: center, clamp(), ::before content

Build guide

1. Write the text block and the image as the two children of .split.
2. Grid with one column by default, two above 800px.
3. Give the image height 100% and object-fit: cover.
4. Centre the text vertically with align-content.
5. Add tick marks to the list with ::before.
6. Use clamp() for padding.

Project 774: index.html

```
<!DOCTYPE html>

Project type: Statistics strip

Level 1 | 25 projects, one per theme

Show four key numbers in coloured tiles where the big number appears above its label, using flex-direction: column-reverse on a dl.

Project 776: Statistics strip for Cairo Book Shop

Theme: Cairo Book Shop (Giza) | Level 1 | Files: index.html, styles.css

Brief

Show four key numbers in coloured tiles where the big number appears above its label, using flex-direction: column-reverse on a dl.

Learning goals

- Use dl for label/value pairs
- Reverse visual order without changing source order
- Size big numbers with line-height 1

Elements and CSS used

HTML elements	CSS features
dl, div, dt, dd	flex-direction: column-reverse, grid auto-fit, font-weight: 800, line-height: 1, opacity

Build guide

1. Write the dl with a div per pair.
2. Grid the dl.
3. Make each div a flex column-reverse so the number shows first.
4. Style dd large and bold.
5. Colour the tiles.
6. Check the reading order in a screen reader stays label then value.

<dl class="numbers">	Description list of term / description pairs.
<dt>Years open</dt><dd>8</dd>	A term (name) in a description list.
<dt>Happy customers</dt><dd>12,000+</dd>	The description of the preceding term.
<dt>Books</dt><dd>4</dd>	Generic block container for grouping and layout.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #b90000;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 60rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
text-align: center;	Centres inline content such as text.
display: grid;	Turns the element into a grid container.
gap: 1rem;	Space between grid or flex items without extra margins.
grid-template-columns: repeat(auto-fit, minmax(10rem, 1fr));	Defines the columns of the grid.
background: var(--brand);	Background colour or image.
border-radius: 14px;	Rounds the corners.
display: flex;	Turns the element into a flex container (one-dimensional layout).

Declaration	What it does
flex-direction: column-reverse;	Stacks flex items vertically.
font-size: 2.5rem;	Size of the text.
font-weight: 800;	Thickness of the text.
opacity: .9;	Transparency from 0 (invisible) to 1 (solid).

Check your work

- dt before dd in source
- Numbers visually above labels
- Tiles equal height
- White text contrast on brand colour

Exercises

1. Animate the numbers counting up with JavaScript.
2. Add small icons.
3. Add a subtle gradient to the tiles.

Theme data for this project

Field	Value
Business	Cairo Book Shop
Tagline	PDF and printed books about web development
City	Giza
Owner	Mohamed Khattab
Brand colour	#b90000
Accent colour	#f4f1ea
Offers	Learn HTML (120 EGP); CSS in Practice (150 EGP); JavaScript Basics (180 EGP); Web Accessibility (95 EGP)

Project 777: Statistics strip for Nile Bakery

Theme: Nile Bakery (Cairo) | Level 1 | Files: index.html, styles.css

Brief

Show four key numbers in coloured tiles where the big number appears above its label, using flex-direction: column-reverse on a dl.

Learning goals

- Use dl for label/value pairs
- Reverse visual order without changing source order
- Size big numbers with line-height 1

Elements and CSS used

HTML elements	CSS features
dl, div, dt, dd	flex-direction: column-reverse, grid auto-fit, font-weight: 800, line-height: 1, opacity

Build guide

1. Write the dl with a div per pair.
2. Grid the dl.
3. Make each div a flex column-reverse so the number shows first.
4. Style dd large and bold.
5. Colour the tiles.
6. Check the reading order in a screen reader stays label then value.

Project 777: index.html

```

Project 777 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Nile Bakery - In numbers</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
Nile Bakery in numbers	The main heading; only one per page.
<dl class="numbers">	Description list of term / description pairs.
<dt>Years open</dt><dd>8</dd>	A term (name) in a description list.
<dt>Happy customers</dt><dd>12,000+</dd>	The description of the preceding term.
<dt>Pastries</dt><dd>4</dd>	Generic block container for grouping and layout.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #a0522d;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 60rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
text-align: center;	Centres inline content such as text.
display: grid;	Turns the element into a grid container.
gap: 1rem;	Space between grid or flex items without extra margins.
grid-template-columns: repeat(auto-fit, minmax(10rem, 1fr));	Defines the columns of the grid.
background: var(--brand);	Background colour or image.
border-radius: 14px;	Rounds the corners.
display: flex;	Turns the element into a flex container (one-dimensional layout).

Declaration	What it does
flex-direction: column-reverse;	Stacks flex items vertically.
font-size: 2.5rem;	Size of the text.
font-weight: 800;	Thickness of the text.
opacity: .9;	Transparency from 0 (invisible) to 1 (solid).

Check your work

- dt before dd in source
- Numbers visually above labels

```

Project 781 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Lotus Language School - In numbers</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
Lotus Language School in numbers	The main heading; only one per page.
<dl class="numbers">	Description list of term / description pairs.
<dt>Years open</dt><dd>8</dd>	A term (name) in a description list.
<dt>Happy customers</dt><dd>12,000+</dd>	The description of the preceding term.
<dt>Courses</dt><dd>4</dd>	Generic block container for grouping and layout.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #7c3aed;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 60rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
text-align: center;	Centres inline content such as text.
display: grid;	Turns the element into a grid container.
gap: 1rem;	Space between grid or flex items without extra margins.
grid-template-columns: repeat(auto-fit, minmax(10rem, 1fr));	Defines the columns of the grid.
background: var(--brand);	Background colour or image.
border-radius: 14px;	Rounds the corners.
display: flex;	Turns the element into a flex container (one-dimensional layout).

Declaration	What it does
flex-direction: column-reverse;	Stacks flex items vertically.
font-size: 2.5rem;	Size of the text.
font-weight: 800;	Thickness of the text.
opacity: .9;	Transparency from 0 (invisible) to 1 (solid).

Check your work

- dt before dd in source
- Numbers visually above labels
- Tiles equal height
- White text contrast on brand colour

Exercises

1. Animate the numbers counting up with JavaScript.
2. Add small icons.
3. Add a subtle gradient to the tiles.

Theme data for this project

Field	Value
Business	Lotus Language School
Tagline	Learn English, French and German in small groups
City	Alexandria
Owner	Nour El Din
Brand colour	#7c3aed
Accent colour	#f5f3ff
Offers	English A1 (1800 EGP); French B1 (2200 EGP); German A2 (2000 EGP); IELTS preparation (3000 EGP)

Project 782: Statistics strip for Green Leaf Cafe

Theme: Green Leaf Cafe (Zamalek) | Level 1 | Files: index.html, styles.css

Brief

Show four key numbers in coloured tiles where the big number appears above its label, using flex-direction: column-reverse on a dl.

Learning goals

- Use dl for label/value pairs
- Reverse visual order without changing source order
- Size big numbers with line-height 1

Elements and CSS used

HTML elements	CSS features
dl, div, dt, dd	flex-direction: column-reverse, grid auto-fit, font-weight: 800, line-height: 1, opacity

Build guide

1. Write the dl with a div per pair.
2. Grid the dl.
3. Make each div a flex column-reverse so the number shows first.
4. Style dd large and bold.
5. Colour the tiles.
6. Check the reading order in a screen reader stays label then value.

Business	Papyrus Stationery
Tagline	Notebooks, pens and paper made in Egypt
City	Heliopolis
Owner	Dina Fathy
Brand colour	#be185d
Accent colour	#fdf2f8
Offers	Dotted notebook (140 EGP); Fountain pen (350 EGP); Washi tape set (90 EGP); Desk planner (110 EGP)

Project 786: Statistics strip for Oasis Plant Nursery

Theme: Oasis Plant Nursery (Sheikh Zayed) | Level 1 | Files: index.html, styles.css

Brief

Show four key numbers in coloured tiles where the big number appears above its label, using flex-direction: column-reverse on a dl.

Learning goals

- Use dl for label/value pairs
- Reverse visual order without changing source order
- Size big numbers with line-height 1

Elements and CSS used

HTML elements	CSS features
dl, div, dt, dd	flex-direction: column-reverse, grid auto-fit, font-weight: 800, line-height: 1, opacity

Build guide

1. Write the dl with a div per pair.
2. Grid the dl.
3. Make each div a flex column-reverse so the number shows first.
4. Style dd large and bold.
5. Colour the tiles.
6. Check the reading order in a screen reader stays label then value.

Project 786: index.html

```
<!DOCTYPE html>

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Oasis Plant Nursery - In numbers</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
Oasis Plant Nursery in numbers	The main heading; only one per page.
<dl class="numbers">	Description list of term / description pairs.
<dt>Years open</dt><dd>8</dd>	A term (name) in a description list.
<dt>Happy customers</dt><dd>12,000+</dd>	The description of the preceding term.
<dt>Plants</dt><dd>4</dd>	Generic block container for grouping and layout.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #15803d;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 60rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
text-align: center;	Centres inline content such as text.
display: grid;	Turns the element into a grid container.
gap: 1rem;	Space between grid or flex items without extra margins.
grid-template-columns: repeat(auto-fit, minmax(10rem, 1fr));	Defines the columns of the grid.
background: var(--brand);	Background colour or image.
border-radius: 14px;	Rounds the corners.
display: flex;	Turns the element into a flex container (one-dimensional layout).

Declaration	What it does
flex-direction: column-reverse;	Stacks flex items vertically.
font-size: 2.5rem;	Size of the text.
font-weight: 800;	Thickness of the text.
opacity: .9;	Transparency from 0 (invisible) to 1 (solid).

Check your work

- dt before dd in source
- Numbers visually above labels
- Tiles equal height
- White text contrast on brand colour

Exercises

1. Animate the numbers counting up with JavaScript.
2. Add small icons.
3. Add a subtle gradient to the tiles.

Theme data for this project

Field	Value
Business	Oasis Plant Nursery
Tagline	Indoor plants and gardening advice
City	Sheikh Zayed
Owner	Hossam Ali
Brand colour	#15803d
Accent colour	#f7fee7
Offers	Monstera (250 EGP); Snake plant (120 EGP); Basil pot (45 EGP); Olive tree (600 EGP)

<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Alexandria Sailing School - In numbers</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
Alexandria Sailing School in numbers	The main heading; only one per page.
<dl class="numbers">	Description list of term / description pairs.
<dt>Years open</dt><dd>8</dd>	A term (name) in a description list.
<dt>Happy customers</dt><dd>12,000+</dd>	The description of the preceding term.
<dt>Lessons</dt><dd>4</dd>	Generic block container for grouping and layout.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #1e40af;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 60rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
text-align: center;	Centres inline content such as text.
display: grid;	Turns the element into a grid container.
gap: 1rem;	Space between grid or flex items without extra margins.
grid-template-columns: repeat(auto-fit, minmax(10rem, 1fr));	Defines the columns of the grid.
background: var(--brand);	Background colour or image.
border-radius: 14px;	Rounds the corners.
display: flex;	Turns the element into a flex container (one-dimensional layout).

Declaration	What it does
flex-direction: column-reverse;	Stacks flex items vertically.
font-size: 2.5rem;	Size of the text.
font-weight: 800;	Thickness of the text.
opacity: .9;	Transparency from 0 (invisible) to 1 (solid).

Check your work

- dt before dd in source
- Numbers visually above labels
- Tiles equal height
- White text contrast on brand colour

Exercises

1. Animate the numbers counting up with JavaScript.
2. Add small icons.
3. Add a subtle gradient to the tiles.

Theme data for this project

Field	Value
Business	Alexandria Sailing School
Tagline	Learn to sail on the Mediterranean
City	Alexandria
Owner	Amr Selim
Brand colour	#1e40af
Accent colour	#eff6ff
Offers	Taster session (500 EGP); Beginner course (2200 EGP); Racing clinic (1800 EGP); Private lesson (900 EGP)

Project 791: Statistics strip for Habiba Handmade Jewellery

Theme: Habiba Handmade Jewellery (Aswan) | Level 1 | Files: index.html, styles.css

Brief

Show four key numbers in coloured tiles where the big number appears above its label, using flex-direction: column-reverse on a dl.

Learning goals

- Use dl for label/value pairs
- Reverse visual order without changing source order
- Size big numbers with line-height 1

Elements and CSS used

HTML elements	CSS features
dl, div, dt, dd	flex-direction: column-reverse, grid auto-fit, font-weight: 800, line-height: 1, opacity

Build guide

1. Write the dl with a div per pair.
2. Grid the dl.
3. Make each div a flex column-reverse so the number shows first.
4. Style dd large and bold.
5. Colour the tiles.
6. Check the reading order in a screen reader stays label then value.

Project 791: index.html

```

Theme: Luxor Music Academy (Luxor) | Level 1 | Files: index.html, styles.css

Brief

Show four key numbers in coloured tiles where the big number appears above its label, using flex-direction: column-reverse on a dl.

Learning goals

- Use dl for label/value pairs
- Reverse visual order without changing source order
- Size big numbers with line-height 1

Elements and CSS used

HTML elements	CSS features
dl, div, dt, dd	flex-direction: column-reverse, grid auto-fit, font-weight: 800, line-height: 1, opacity

Build guide

1. Write the dl with a div per pair.
2. Grid the dl.
3. Make each div a flex column-reverse so the number shows first.
4. Style dd large and bold.
5. Colour the tiles.
6. Check the reading order in a screen reader stays label then value.

```

Project 795 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Luxor Music Academy - In numbers</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
Luxor Music Academy in numbers	The main heading; only one per page.
<dl class="numbers">	Description list of term / description pairs.
<dt>Years open</dt><dd>8</dd>	A term (name) in a description list.
<dt>Happy customers</dt><dd>12,000+</dd>	The description of the preceding term.
<dt>Courses</dt><dd>4</dd>	Generic block container for grouping and layout.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #4c1d95;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 60rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
text-align: center;	Centres inline content such as text.
display: grid;	Turns the element into a grid container.
gap: 1rem;	Space between grid or flex items without extra margins.
grid-template-columns: repeat(auto-fit, minmax(10rem, 1fr));	Defines the columns of the grid.
background: var(--brand);	Background colour or image.
border-radius: 14px;	Rounds the corners.
display: flex;	Turns the element into a flex container (one-dimensional layout).

Declaration	What it does
flex-direction: column-reverse;	Stacks flex items vertically.
font-size: 2.5rem;	Size of the text.
font-weight: 800;	Thickness of the text.
opacity: .9;	Transparency from 0 (invisible) to 1 (solid).

Check your work

- dt before dd in source
- Numbers visually above labels
- Tiles equal height
- White text contrast on brand colour

Exercises

1. Animate the numbers counting up with JavaScript.
2. Add small icons.
3. Add a subtle gradient to the tiles.

Theme data for this project

<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
Ismailia Cycling Store in numbers	The main heading; only one per page.
<dl class="numbers">	Description list of term / description pairs.
<dt>Years open</dt><dd>8</dd>	A term (name) in a description list.
<dt>Happy customers</dt><dd>12,000+</dd>	The description of the preceding term.
<dt>Bikes</dt><dd>4</dd>	Generic block container for grouping and layout.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #dc2626;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 60rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
text-align: center;	Centres inline content such as text.
display: grid;	Turns the element into a grid container.
gap: 1rem;	Space between grid or flex items without extra margins.
grid-template-columns: repeat(auto-fit, minmax(10rem, 1fr));	Defines the columns of the grid.
background: var(--brand);	Background colour or image.
border-radius: 14px;	Rounds the corners.
display: flex;	Turns the element into a flex container (one-dimensional layout).

Declaration	What it does
flex-direction: column-reverse;	Stacks flex items vertically.
font-size: 2.5rem;	Size of the text.
font-weight: 800;	Thickness of the text.
opacity: .9;	Transparency from 0 (invisible) to 1 (solid).

Check your work

- dt before dd in source
- Numbers visually above labels
- Tiles equal height
- White text contrast on brand colour

Exercises

1. Animate the numbers counting up with JavaScript.
2. Add small icons.
3. Add a subtle gradient to the tiles.

Theme data for this project

Field	Value
Business	Ismailia Cycling Store
Tagline	Bikes, parts and Friday group rides
City	Ismailia
Owner	Bassem Adly
Brand colour	#dc2626
Accent colour	#fef2f2
Offers	City bike (6500 EGP); Mountain bike (11000 EGP); Kids bike (3200 EGP); Tune-up (250 EGP)

Project 800: Statistics strip for Minya Coding Club

Theme: Minya Coding Club (Minya) | Level 1 | Files: index.html, styles.css

Brief

Show four key numbers in coloured tiles where the big number appears above its label, using flex-direction: column-reverse on a dl.

Learning goals

- Use dl for label/value pairs
- Reverse visual order without changing source order
- Size big numbers with line-height 1

Elements and CSS used

HTML elements	CSS features
dl, div, dt, dd	flex-direction: column-reverse, grid auto-fit, font-weight: 800, line-height: 1, opacity

Build guide

1. Write the dl with a div per pair.
2. Grid the dl.
3. Make each div a flex column-reverse so the number shows first.
4. Style dd large and bold.
5. Colour the tiles.
6. Check the reading order in a screen reader stays label then value.

Project 800: index.html

Offers	HTML weekend (Free); CSS art (Free); Scratch games (Free); Hackathon (Free)

Project type: Breadcrumbs and pagination

Level 1 | 25 projects, one per theme

Add two navigation aids: a breadcrumb trail with CSS-generated separators and a pagination bar with a highlighted current page.

Project 801: Breadcrumbs and pagination for Cairo Book Shop

Theme: Cairo Book Shop (Giza) | Level 1 | Files: index.html, styles.css

Brief

Add two navigation aids: a breadcrumb trail with CSS-generated separators and a pagination bar with a highlighted current page.

Learning goals

- Use nav with aria-label for secondary navigation
- Generate separators with li + li::before
- Style the current item with [aria-current]

Elements and CSS used

HTML elements	CSS features
nav, ol, li, a	adjacent sibling +, ::before content, attribute selector, min-width, border

Build guide

1. Write the breadcrumb ol inside a nav.
2. Mark the last item with aria-current="page" and no link.
3. Write the pager with previous/next arrows labelled.
4. Add separators with li + li::before so the first has none.
5. Style pager links as boxes.
6. Highlight the current page.

Project 801: index.html

```
<!DOCTYPE html>

Project 804: Breadcrumbs and pagination for Delta Dental Clinic

Theme: Delta Dental Clinic (Mansoura) | Level 1 | Files: index.html, styles.css

Brief

Add two navigation aids: a breadcrumb trail with CSS-generated separators and a pagination bar with a highlighted current page.

Learning goals

- Use nav with aria-label for secondary navigation
- Generate separators with li + li::before
- Style the current item with [aria-current]

Elements and CSS used

HTML elements	CSS features
nav, ol, li, a	adjacent sibling +, ::before content, attribute selector, min-width, border

Build guide

1. Write the breadcrumb ol inside a nav.
2. Mark the last item with aria-current="page" and no link.
3. Write the pager with previous/next arrows labelled.
4. Add separators with li + li::before so the first has none.
5. Style pager links as boxes.
6. Highlight the current page.

Project 804: index.html

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1">

Project 807 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Flat white - Green Leaf Cafe</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
<nav aria-label="Breadcrumb">	A block of navigation links; aria-label names it for screen readers.
<ol class="crumbs">	Ordered (numbered) list; the order matters.
Home	A hyperlink; href gives the destination.
Drinks	One list item.
<li aria-current="page">Flat white	Tells assistive technology which item is the current page or step.
Flat white	The main heading; only one per page.
Double shot, silky milk.	A paragraph of text.

Line	What it does
<nav class="pager" aria-label="Pagination">	Accessible name for an element that has no visible text.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #166534;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 44rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
list-style: none;	Removes bullets or numbers from a list.
display: flex;	Turns the element into a flex container (one-dimensional layout).
flex-wrap: wrap;	Allows flex items to move to a new line when they do not fit.

Declaration	What it does
gap: .25rem;	Space between grid or flex items without extra margins.
font-size: .9rem;	Size of the text.
.crumbs li + li::before {	Adjacent sibling combinator: every li that follows another li.
content: "/";	The text or empty string for a pseudo-element.
.crumbs [aria-current] {	Attribute selector: styles the current page or step.
text-align: center;	Centres inline content such as text.
border: 1px solid var(--line);	Changes the visual order of a flex item without changing the source.
border-radius: 6px;	Rounds the corners.
text-decoration: none;	Removes the underline from links.
.pager a:hover {	Applies while the pointer is over the element.
background: var(--accent);	Background colour or image.
border-color: var(--brand);	The line around the element: width, style and colour.

Check your work

- Both navs have distinct aria-labels
- Separators not in the HTML
- Arrows have aria-label
- Current page not a link in breadcrumb

Exercises

1. Use an SVG chevron as the separator.
2. Add schema.org BreadcrumbList microdata.

3. Collapse middle crumbs on narrow screens.

Theme data for this project

Field	Value
Business	Green Leaf Cafe
Tagline	Specialty coffee and quiet corners
City	Zamalek
Owner	Karim Said
Brand colour	#166534
Accent colour	#f0fdf4
Offers	Flat white (55 EGP); Cold brew (60 EGP); Hibiscus iced tea (40 EGP); Cheesecake (75 EGP)

Project 808: Breadcrumbs and pagination for Sinai Trekking Club

Theme: Sinai Trekking Club (Saint Catherine) | Level 1 | Files: index.html, styles.css

Brief

Add two navigation aids: a breadcrumb trail with CSS-generated separators and a pagination bar with a highlighted current page.

Learning goals

- Use nav with aria-label for secondary navigation
- Generate separators with li + li::before
- Style the current item with [aria-current]

Elements and CSS used

HTML elements	CSS features
nav, ol, li, a	adjacent sibling +, ::before content, attribute selector, min-width, border

Build guide

1. Write the breadcrumb ol inside a nav.
2. Mark the last item with aria-current="page" and no link.
3. Write the pager with previous/next arrows labelled.
4. Add separators with li + li::before so the first has none.
5. Style pager links as boxes.
6. Highlight the current page.

Project 808: index.html

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1">
  <title>Mount Sinai sunrise - Sinai Trekking Club</title>
  <link rel="stylesheet" href="styles.css">
</head>
<body>
  <main>
    <nav aria-label="Breadcrumb">
      <ol class="crumbs">
        <li><a href="index.html">Home</a></li>
        <li><a href="hikes.html">Hikes</a></li>
        <li aria-current="page">Mount Sinai sunrise</li>
      </ol>
    </nav>
    <h1>Mount Sinai sunrise</h1>
    <p>Night climb, 7 km.</p>
    <nav class="pager" aria-label="Pagination">
      <a href="?page=1" aria-label="Previous page">&laquo;</a>
      <a href="?page=1">1</a>
      <a href="?page=2" aria-current="page">2</a>

Project 811 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Monstera - Oasis Plant Nursery</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
<nav aria-label="Breadcrumb">	A block of navigation links; aria-label names it for screen readers.
<ol class="crumbs">	Ordered (numbered) list; the order matters.
Home	A hyperlink; href gives the destination.
Plants	One list item.
<li aria-current="page">Monstera	Tells assistive technology which item is the current page or step.
Monstera	The main heading; only one per page.
Large leaves, easy care.	A paragraph of text.

Line	What it does
<nav class="pager" aria-label="Pagination">	Accessible name for an element that has no visible text.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #15803d;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 44rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
list-style: none;	Removes bullets or numbers from a list.
display: flex;	Turns the element into a flex container (one-dimensional layout).
flex-wrap: wrap;	Allows flex items to move to a new line when they do not fit.

Declaration	What it does
gap: .25rem;	Space between grid or flex items without extra margins.
font-size: .9rem;	Size of the text.
.crumbs li + li::before {	Adjacent sibling combinator: every li that follows another li.
content: "/";	The text or empty string for a pseudo-element.
.crumbs [aria-current] {	Attribute selector: styles the current page or step.
text-align: center;	Centres inline content such as text.
border: 1px solid var(--line);	Changes the visual order of a flex item without changing the source.
border-radius: 6px;	Rounds the corners.
text-decoration: none;	Removes the underline from links.
.pager a:hover {	Applies while the pointer is over the element.
background: var(--accent);	Background colour or image.
border-color: var(--brand);	The line around the element: width, style and colour.

Check your work

- Both navs have distinct aria-labels
- Separators not in the HTML
- Arrows have aria-label
- Current page not a link in breadcrumb

Exercises

1. Use an SVG chevron as the separator.
2. Add schema.org BreadcrumbList microdata.

3. Collapse middle crumbs on narrow screens.

Theme data for this project

Field	Value
Business	Oasis Plant Nursery
Tagline	Indoor plants and gardening advice
City	Sheikh Zayed
Owner	Hossam Ali
Brand colour	#15803d
Accent colour	#f7fee7
Offers	Monstera (250 EGP); Snake plant (120 EGP); Basil pot (45 EGP); Olive tree (600 EGP)

Project 812: Breadcrumbs and pagination for Cedar Furniture

Theme: Cedar Furniture (Damietta) | Level 1 | Files: index.html, styles.css

Brief

Add two navigation aids: a breadcrumb trail with CSS-generated separators and a pagination bar with a highlighted current page.

Learning goals

- Use nav with aria-label for secondary navigation
- Generate separators with li + li::before
- Style the current item with [aria-current]

Elements and CSS used

HTML elements	CSS features
nav, ol, li, a	adjacent sibling +, ::before content, attribute selector, min-width, border

Build guide

1. Write the breadcrumb ol inside a nav.
2. Mark the last item with aria-current="page" and no link.
3. Write the pager with previous/next arrows labelled.
4. Add separators with li + li::before so the first has none.
5. Style pager links as boxes.
6. Highlight the current page.

Project 812: index.html

text-decoration: none;	Removes the underline from links.
.pager a:hover {	Applies while the pointer is over the element.
background: var(--accent);	Background colour or image.
border-color: var(--brand);	The line around the element: width, style and colour.

Check your work

- Both navs have distinct aria-labels
- Separators not in the HTML
- Arrows have aria-label
- Current page not a link in breadcrumb

Exercises

1. Use an SVG chevron as the separator.
2. Add schema.org BreadcrumbList microdata.

3. Collapse middle crumbs on narrow screens.

Theme data for this project

Field	Value
Business	Sahara Pet Care
Tagline	Grooming, boarding and vet visits
City	New Cairo
Owner	Rana Ibrahim
Brand colour	#c2410c
Accent colour	#fff7ed
Offers	Full grooming (400 EGP); Day boarding (250 EGP); Vaccination (300 EGP); Dog walking (100 EGP)

Project 815: Breadcrumbs and pagination for Alexandria Sailing School

Theme: Alexandria Sailing School (Alexandria) | Level 1 | Files: index.html, styles.css

Brief

Add two navigation aids: a breadcrumb trail with CSS-generated separators and a pagination bar with a highlighted current page.

Learning goals

- Use nav with aria-label for secondary navigation
- Generate separators with li + li::before
- Style the current item with [aria-current]

Elements and CSS used

HTML elements	CSS features
nav, ol, li, a	adjacent sibling +, ::before content, attribute selector, min-width, border

Build guide

1. Write the breadcrumb ol inside a nav.
2. Mark the last item with aria-current="page" and no link.
3. Write the pager with previous/next arrows labelled.
4. Add separators with li + li::before so the first has none.
5. Style pager links as boxes.
6. Highlight the current page.

Project 815: index.html

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1">
  <title>Taster session - Alexandria Sailing School</title>
  <link rel="stylesheet" href="styles.css">

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Taster session - Alexandria Sailing School</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
<nav aria-label="Breadcrumb">	A block of navigation links; aria-label names it for screen readers.
<ol class="crumbs">	Ordered (numbered) list; the order matters.
Home	A hyperlink; href gives the destination.
Lessons	One list item.
<li aria-current="page">Taster session	Tells assistive technology which item is the current page or step.
Taster session	The main heading; only one per page.

Line	What it does
Two hours on the water.	A paragraph of text.
<nav class="pager" aria-label="Pagination">	Accessible name for an element that has no visible text.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #1e40af;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 44rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
list-style: none;	Removes bullets or numbers from a list.
display: flex;	Turns the element into a flex container (one-dimensional layout).

Declaration	What it does
flex-wrap: wrap;	Allows flex items to move to a new line when they do not fit.
gap: .25rem;	Space between grid or flex items without extra margins.
font-size: .9rem;	Size of the text.
.crumbs li + li::before {	Adjacent sibling combinator: every li that follows another li.
content: "/";	The text or empty string for a pseudo-element.
.crumbs [aria-current] {	Attribute selector: styles the current page or step.
text-align: center;	Centres inline content such as text.
border: 1px solid var(--line);	Changes the visual order of a flex item without changing the source.
border-radius: 6px;	Rounds the corners.
text-decoration: none;	Removes the underline from links.
.pager a:hover {	Applies while the pointer is over the element.
background: var(--accent);	Background colour or image.
border-color: var(--brand);	The line around the element: width, style and colour.

Check your work

<nav class="pager" aria-label="Pagination">	Accessible name for an element that has no visible text.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #db2777;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 44rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
list-style: none;	Removes bullets or numbers from a list.

Declaration	What it does
display: flex;	Turns the element into a flex container (one-dimensional layout).
flex-wrap: wrap;	Allows flex items to move to a new line when they do not fit.
gap: .25rem;	Space between grid or flex items without extra margins.
font-size: .9rem;	Size of the text.
.crumbs li + li::before {	Adjacent sibling combinator: every li that follows another li.
content: "/";	The text or empty string for a pseudo-element.
.crumbs [aria-current] {	Attribute selector: styles the current page or step.
text-align: center;	Centres inline content such as text.
border: 1px solid var(--line);	Changes the visual order of a flex item without changing the source.
border-radius: 6px;	Rounds the corners.
text-decoration: none;	Removes the underline from links.
.pager a:hover {	Applies while the pointer is over the element.
background: var(--accent);	Background colour or image.
border-color: var(--brand);	The line around the element: width, style and colour.

Check your work

- Both navs have distinct aria-labels
- Separators not in the HTML
- Arrows have aria-label
- Current page not a link in breadcrumb

Exercises

1. Use an SVG chevron as the separator.
2. Add schema.org BreadcrumbList microdata.
3. Collapse middle crumbs on narrow screens.

Theme data for this project

Field	Value
Business	Cleopatra Beauty Salon
Tagline	Hair, nails and skin care
City	Dokki
Owner	Mariam Adel

Project 819: Breadcrumbs and pagination for Suez Auto Service

Theme: Suez Auto Service (Suez) | Level 1 | Files: index.html, styles.css

Brief

Add two navigation aids: a breadcrumb trail with CSS-generated separators and a pagination bar with a highlighted current page.

Learning goals

- Use nav with aria-label for secondary navigation
- Generate separators with li + li::before
- Style the current item with [aria-current]

Elements and CSS used

HTML elements	CSS features
nav, ol, li, a	adjacent sibling +, ::before content, attribute selector, min-width, border

Build guide

1. Write the breadcrumb ol inside a nav.
2. Mark the last item with aria-current="page" and no link.
3. Write the pager with previous/next arrows labelled.
4. Add separators with li + li::before so the first has none.
5. Style pager links as boxes.
6. Highlight the current page.

Project 819: index.html

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1">

Project 822 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Story hour - Delta Kids Library</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
<nav aria-label="Breadcrumb">	A block of navigation links; aria-label names it for screen readers.
<ol class="crumbs">	Ordered (numbered) list; the order matters.
Home	A hyperlink; href gives the destination.
Programmes	One list item.
<li aria-current="page">Story hour	Tells assistive technology which item is the current page or step.
Story hour	The main heading; only one per page.
Ages 3 to 6, Saturdays.	A paragraph of text.

Line	What it does
<nav class="pager" aria-label="Pagination">	Accessible name for an element that has no visible text.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #ea580c;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 44rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
list-style: none;	Removes bullets or numbers from a list.
display: flex;	Turns the element into a flex container (one-dimensional layout).
flex-wrap: wrap;	Allows flex items to move to a new line when they do not fit.

Declaration	What it does
gap: .25rem;	Space between grid or flex items without extra margins.
font-size: .9rem;	Size of the text.
.crumbs li + li::before {	Adjacent sibling combinator: every li that follows another li.
content: "/";	The text or empty string for a pseudo-element.
.crumbs [aria-current] {	Attribute selector: styles the current page or step.
text-align: center;	Centres inline content such as text.
border: 1px solid var(--line);	Changes the visual order of a flex item without changing the source.
border-radius: 6px;	Rounds the corners.
text-decoration: none;	Removes the underline from links.
.pager a:hover {	Applies while the pointer is over the element.
background: var(--accent);	Background colour or image.
border-color: var(--brand);	The line around the element: width, style and colour.

Check your work

- Both navs have distinct aria-labels
- Separators not in the HTML
- Arrows have aria-label
- Current page not a link in breadcrumb

Exercises

1. Use an SVG chevron as the separator.
2. Add schema.org BreadcrumbList microdata.

3. Collapse middle crumbs on narrow screens.

Theme data for this project

Field	Value
Business	Delta Kids Library
Tagline	Stories, reading clubs and homework help
City	Tanta
Owner	Ghada Kamel
Brand colour	#ea580c
Accent colour	#fff7ed
Offers	Story hour (Free); Reading club (50 EGP per month); Homework help (Free); Summer challenge (Free)

Project 823: Breadcrumbs and pagination for Nubian Guest House

Theme: Nubian Guest House (Aswan) | Level 1 | Files: index.html, styles.css

Brief

Add two navigation aids: a breadcrumb trail with CSS-generated separators and a pagination bar with a highlighted current page.

Learning goals

- Use nav with aria-label for secondary navigation
- Generate separators with li + li::before
- Style the current item with [aria-current]

Elements and CSS used

HTML elements	CSS features
nav, ol, li, a	adjacent sibling +, ::before content, attribute selector, min-width, border

Build guide

1. Write the breadcrumb ol inside a nav.
2. Mark the last item with aria-current="page" and no link.
3. Write the pager with previous/next arrows labelled.
4. Add separators with li + li::before so the first has none.
5. Style pager links as boxes.
6. Highlight the current page.

Project 823: index.html

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="utf-8">

Project type: Alert message components

Level 1 | 25 projects, one per theme

Create four message styles (info, success, warning, error) with colour, a thick left border and a text prefix so meaning does not rely on colour alone.

Project 826: Alert message components for Cairo Book Shop

Theme: Cairo Book Shop (Giza) | Level 1 | Files: index.html, styles.css

Brief

Create four message styles (info, success, warning, error) with colour, a thick left border and a text prefix so meaning does not rely on colour alone.

Learning goals

- Build reusable component classes
- Use role=status and role=alert
- Use border shorthand then override one side

Elements and CSS used

HTML elements	CSS features
p, strong	border: 1px solid, border-left-width, border-color, background, class modifiers

Build guide

1. Write four paragraphs with the shared class alert and a modifier class.
2. Prefix each with a strong label.
3. Add role attributes.
4. Style .alert once with padding, radius and a 1px border.
5. Set border-left-width: 6px.
6. Set colours per modifier.

Project 826: index.html

```
<!DOCTYPE html>

Project 826 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Cairo Book Shop - Messages</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
Message styles	The main heading; only one per page.
<p class="alert info" role="status">Info: Cairo Bo...	A paragraph of text.
<p class="alert success" role="status">Success: Yo...	Strong importance (bold by default).
<p class="alert warning" role="alert">Warning: Onl...	Gives the element an ARIA role for assistive technology.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #b90000;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 40rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
display: grid;	Turns the element into a grid container.
gap: 1rem;	Space between grid or flex items without extra margins.
border-radius: 10px;	Rounds the corners.
border: 1px solid;	Changes the visual order of a flex item without changing the source.
border-left-width: 6px;	A thick left border used as an accent stripe.
background: #eff6ff;	Background colour or image.
border-color: #60a5fa;	The line around the element: width, style and colour.

Check your work

- Each message has a text label
- Contrast passes for all four
- Shared styles in one rule
- role used correctly

Exercises

1. Add a close button that hides the alert with JavaScript.
2. Add icons with ::before.
3. Add a dark mode variant.

Theme data for this project

Field	Value
Business	Cairo Book Shop
Tagline	PDF and printed books about web development
City	Giza
Owner	Mohamed Khattab
Brand colour	#b90000
Accent colour	#f4f1ea
Offers	Learn HTML (120 EGP); CSS in Practice (150 EGP); JavaScript Basics (180 EGP); Web Accessibility (95 EGP)

Project 827: Alert message components for Nile Bakery

Theme: Nile Bakery (Cairo) | Level 1 | Files: index.html, styles.css

Brief

Create four message styles (info, success, warning, error) with colour, a thick left border and a text prefix so meaning does not rely on colour alone.

Learning goals

- Build reusable component classes
- Use role=status and role=alert
- Use border shorthand then override one side

Elements and CSS used

HTML elements	CSS features
p, strong	border: 1px solid, border-left-width, border-color, background, class modifiers

Build guide

1. Write four paragraphs with the shared class alert and a modifier class.
2. Prefix each with a strong label.
3. Add role attributes.
4. Style .alert once with padding, radius and a 1px border.
5. Set border-left-width: 6px.
6. Set colours per modifier.

Project 827: index.html

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1">
  <title>Nile Bakery - Messages</title>
  <link rel="stylesheet" href="styles.css">
</head>
<body>
  <main>
    <h1>Message styles</h1>
    <p class="alert info" role="status"><strong>Info:</strong> Nile
Bakery opens at 10:00 on Fridays.</p>
    <p class="alert success" role="status"><strong>Success:</strong>
Your pastry has been booked.</p>
    <p class="alert warning" role="alert"><strong>Warning:</strong>
Only two pastries left this week.</p>
    <p class="alert error" role="alert"><strong>Error:</strong> The
email address is not valid.</p>
  </main>
</body>
</html>
```

Project 827: styles.css

```
*, *::before, *::after { box-sizing: border-box; }

1. Add a close button that hides the alert with JavaScript.
2. Add icons with ::before.
3. Add a dark mode variant.

Theme data for this project

Field	Value
Business	Red Sea Travel
Tagline	Discover Egypt from desert to reef
City	Hurghada
Owner	Laila Mansour
Brand colour	#0369a1
Accent colour	#f0f9ff
Offers	Luxor day trip (1200 EGP); Snorkelling (700 EGP); Desert safari (900 EGP); Nile cruise (6500 EGP)

Project 831: Alert message components for Lotus Language School

Theme: Lotus Language School (Alexandria) | Level 1 | Files: index.html, styles.css

Brief

Create four message styles (info, success, warning, error) with colour, a thick left border and a text prefix so meaning does not rely on colour alone.

Learning goals

- Build reusable component classes
- Use role=status and role=alert
- Use border shorthand then override one side

Elements and CSS used

HTML elements	CSS features
p, strong	border: 1px solid, border-left-width, border-color, background, class modifiers

Build guide

1. Write four paragraphs with the shared class alert and a modifier class.
2. Prefix each with a strong label.
3. Add role attributes.
4. Style .alert once with padding, radius and a 1px border.
5. Set border-left-width: 6px.

6. Set colours per modifier.

Project 831: index.html

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1">
  <title>Lotus Language School - Messages</title>
  <link rel="stylesheet" href="styles.css">
</head>
<body>
  <main>
    <h1>Message styles</h1>
    <p class="alert info" role="status"><strong>Info:</strong> Lotus
Language School opens at 10:00 on Fridays.</p>
    <p class="alert success" role="status"><strong>Success:</strong>
Your course has been booked.</p>
    <p class="alert warning" role="alert"><strong>Warning:</strong>
Only two courses left this week.</p>
    <p class="alert error" role="alert"><strong>Error:</strong> The
email address is not valid.</p>
  </main>
</body>
</html>
```

Project 831: styles.css

```
*, *::before, *::after { box-sizing: border-box; }
:root { --brand: #7c3aed; --accent: #f5f3ff; --ink: #1b2431; --muted:
#5b6472; --line: #d9d9d9; }
body { margin: 0; font-family: system-ui, Arial, sans-serif; line-
height: 1.6; color: var(--ink); }
main { max-width: 40rem; margin: 2rem auto; padding: 0 1rem; display:
grid; gap: 1rem; }
.alert { margin: 0; padding: .9rem 1.1rem; border-radius: 10px;
border: 1px solid; border-left-width: 6px; }
.info    { background: #eff6ff; border-color: #60a5fa; color: #1e3a8a;
 }
.success { background: #f0fdf4; border-color: #4ade80; color: #14532d;
 }
.warning { background: #fffbeb; border-color: #fbbf24; color: #78350f;
 }
.error   { background: #fef2f2; border-color: #f87171; color: #7f1d1d;
 }
```

Project 831 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Lotus Language School - Messages</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
Message styles	The main heading; only one per page.
<p class="alert info" role="status">Info: Lotus La...	A paragraph of text.
<p class="alert success" role="status">Success: Yo...	Strong importance (bold by default).
<p class="alert warning" role="alert">Warning: Onl...	Gives the element an ARIA role for assistive technology.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #7c3aed;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 40rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
display: grid;	Turns the element into a grid container.
gap: 1rem;	Space between grid or flex items without extra margins.
border-radius: 10px;	Rounds the corners.
border: 1px solid;	Changes the visual order of a flex item without changing the source.
border-left-width: 6px;	A thick left border used as an accent stripe.
background: #eff6ff;	Background colour or image.
border-color: #60a5fa;	The line around the element: width, style and colour.

Check your work

- Each message has a text label
- Contrast passes for all four
- Shared styles in one rule
- role used correctly

Exercises

1. Add a close button that hides the alert with JavaScript.
2. Add icons with ::before.
3. Add a dark mode variant.

Theme data for this project

<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
Message styles	The main heading; only one per page.
<p class="alert info" role="status">Info: Papyrus ...	A paragraph of text.
<p class="alert success" role="status">Success: Yo...	Strong importance (bold by default).
<p class="alert warning" role="alert">Warning: Onl...	Gives the element an ARIA role for assistive technology.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #be185d;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 40rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
display: grid;	Turns the element into a grid container.
gap: 1rem;	Space between grid or flex items without extra margins.
border-radius: 10px;	Rounds the corners.
border: 1px solid;	Changes the visual order of a flex item without changing the source.
border-left-width: 6px;	A thick left border used as an accent stripe.
background: #eff6ff;	Background colour or image.
border-color: #60a5fa;	The line around the element: width, style and colour.

Check your work

- Each message has a text label
- Contrast passes for all four
- Shared styles in one rule
- role used correctly

Exercises

1. Add a close button that hides the alert with JavaScript.
2. Add icons with ::before.
3. Add a dark mode variant.

Theme data for this project

Field	Value
Business	Papyrus Stationery
Tagline	Notebooks, pens and paper made in Egypt
City	Heliopolis
Owner	Dina Fathy
Brand colour	#be185d
Accent colour	#fdf2f8
Offers	Dotted notebook (140 EGP); Fountain pen (350 EGP); Washi tape set (90 EGP); Desk planner (110 EGP)

Project 836: Alert message components for Oasis Plant Nursery

Theme: Oasis Plant Nursery (Sheikh Zayed) | Level 1 | Files: index.html, styles.css

Brief

Create four message styles (info, success, warning, error) with colour, a thick left border and a text prefix so meaning does not rely on colour alone.

Learning goals

- Build reusable component classes
- Use role=status and role=alert
- Use border shorthand then override one side

Elements and CSS used

HTML elements	CSS features
p, strong	border: 1px solid, border-left-width, border-color, background, class modifiers

Build guide

1. Write four paragraphs with the shared class alert and a modifier class.
2. Prefix each with a strong label.
3. Add role attributes.
4. Style .alert once with padding, radius and a 1px border.
5. Set border-left-width: 6px.

6. Set colours per modifier.

Project 836: index.html

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1">
  <title>Oasis Plant Nursery - Messages</title>
  <link rel="stylesheet" href="styles.css">
</head>
<body>
  <main>
    <h1>Message styles</h1>
    <p class="alert info" role="status"><strong>Info:</strong> Oasis
Plant Nursery opens at 10:00 on Fridays.</p>
    <p class="alert success" role="status"><strong>Success:</strong>
Your plant has been booked.</p>
    <p class="alert warning" role="alert"><strong>Warning:</strong>
Only two plants left this week.</p>
    <p class="alert error" role="alert"><strong>Error:</strong> The
email address is not valid.</p>
  </main>
</body>
</html>
```

Project 836: styles.css

```
*, *::before, *::after { box-sizing: border-box; }
:root { --brand: #15803d; --accent: #f7fee7; --ink: #1b2431; --muted:
#5b6472; --line: #d9d9d9; }
body { margin: 0; font-family: system-ui, Arial, sans-serif; line-
height: 1.6; color: var(--ink); }
main { max-width: 40rem; margin: 2rem auto; padding: 0 1rem; display:
grid; gap: 1rem; }
.alert { margin: 0; padding: .9rem 1.1rem; border-radius: 10px;
border: 1px solid; border-left-width: 6px; }
.info    { background: #eff6ff; border-color: #60a5fa; color: #1e3a8a;
 }
.success { background: #f0fdf4; border-color: #4ade80; color: #14532d;
 }
.warning { background: #fffbeb; border-color: #fbbf24; color: #78350f;

Project 840 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Alexandria Sailing School - Messages</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
Message styles	The main heading; only one per page.
<p class="alert info" role="status">Info: Alexandr...	A paragraph of text.
<p class="alert success" role="status">Success: Yo...	Strong importance (bold by default).
<p class="alert warning" role="alert">Warning: Onl...	Gives the element an ARIA role for assistive technology.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #1e40af;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 40rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
display: grid;	Turns the element into a grid container.
gap: 1rem;	Space between grid or flex items without extra margins.
border-radius: 10px;	Rounds the corners.
border: 1px solid;	Changes the visual order of a flex item without changing the source.
border-left-width: 6px;	A thick left border used as an accent stripe.
background: #eff6ff;	Background colour or image.
border-color: #60a5fa;	The line around the element: width, style and colour.

Check your work

- Each message has a text label
- Contrast passes for all four
- Shared styles in one rule
- role used correctly

Exercises

1. Add a close button that hides the alert with JavaScript.
2. Add icons with ::before.
3. Add a dark mode variant.

Theme data for this project

Field	Value
Business	Alexandria Sailing School
Tagline	Learn to sail on the Mediterranean
City	Alexandria
Owner	Amr Selim
Brand colour	#1e40af
Accent colour	#eff6ff
Offers	Taster session (500 EGP); Beginner course (2200 EGP); Racing clinic (1800 EGP); Private lesson (900 EGP)

Project 841: Alert message components for Habiba Handmade Jewellery

Theme: Habiba Handmade Jewellery (Aswan) | Level 1 | Files: index.html, styles.css

Brief

Create four message styles (info, success, warning, error) with colour, a thick left border and a text prefix so meaning does not rely on colour alone.

Learning goals

- Build reusable component classes
- Use role=status and role=alert
- Use border shorthand then override one side

Elements and CSS used

HTML elements	CSS features
p, strong	border: 1px solid, border-left-width, border-color, background, class modifiers

Build guide

1. Write four paragraphs with the shared class alert and a modifier class.
2. Prefix each with a strong label.
3. Add role attributes.
4. Style .alert once with padding, radius and a 1px border.
5. Set border-left-width: 6px.

6. Set colours per modifier.

Project 841: index.html

```
<!DOCTYPE html>
<html lang="en">

- role used correctly

Exercises

1. Add a close button that hides the alert with JavaScript.
2. Add icons with ::before.
3. Add a dark mode variant.

Theme data for this project

Field	Value
Business	Suez Auto Service
Tagline	Honest car servicing and repairs
City	Suez
Owner	Khaled Nasser
Brand colour	#374151
Accent colour	#f9fafb
Offers	Oil change (600 EGP); Brake pads (1400 EGP); Air conditioning (900 EGP); Pre-purchase inspection (750 EGP)

Project 845: Alert message components for Luxor Music Academy

Theme: Luxor Music Academy (Luxor) | Level 1 | Files: index.html, styles.css

Brief

Create four message styles (info, success, warning, error) with colour, a thick left border and a text prefix so meaning does not rely on colour alone.

Learning goals

- Build reusable component classes
- Use role=status and role=alert
- Use border shorthand then override one side

Elements and CSS used

HTML elements	CSS features
p, strong	border: 1px solid, border-left-width, border-color, background, class modifiers

Build guide

1. Write four paragraphs with the shared class alert and a modifier class.
2. Prefix each with a strong label.
3. Add role attributes.
4. Style .alert once with padding, radius and a 1px border.
5. Set border-left-width: 6px.
6. Set colours per modifier.

Project 845: index.html

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1">
  <title>Luxor Music Academy - Messages</title>
  <link rel="stylesheet" href="styles.css">
</head>
<body>
  <main>
    <h1>Message styles</h1>
    <p class="alert info" role="status"><strong>Info:</strong> Luxor
Music Academy opens at 10:00 on Fridays.</p>
    <p class="alert success" role="status"><strong>Success:</strong>
Your course has been booked.</p>
    <p class="alert warning" role="alert"><strong>Warning:</strong>
Only two courses left this week.</p>
    <p class="alert error" role="alert"><strong>Error:</strong> The
email address is not valid.</p>
  </main>
</body>
</html>
```

Project 845: styles.css

```
*, *::before, *::after { box-sizing: border-box; }
:root { --brand: #4c1d95; --accent: #f5f3ff; --ink: #1b2431; --muted:
#5b6472; --line: #d9d9d9; }
body { margin: 0; font-family: system-ui, Arial, sans-serif; line-
height: 1.6; color: var(--ink); }
main { max-width: 40rem; margin: 2rem auto; padding: 0 1rem; display:
grid; gap: 1rem; }
.alert { margin: 0; padding: .9rem 1.1rem; border-radius: 10px;
border: 1px solid; border-left-width: 6px; }
.info    { background: #eff6ff; border-color: #60a5fa; color: #1e3a8a;
 }
.success { background: #f0fdf4; border-color: #4ade80; color: #14532d;
 }
.warning { background: #fffbeb; border-color: #fbbf24; color: #78350f;
 }
.error   { background: #fef2f2; border-color: #f87171; color: #7f1d1d;
 }
```

Project 845 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Luxor Music Academy - Messages</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
Message styles	The main heading; only one per page.
<p class="alert info" role="status">Info: Luxor Mu...	A paragraph of text.
<p class="alert success" role="status">Success: Yo...	Strong importance (bold by default).
<p class="alert warning" role="alert">Warning: Onl...	Gives the element an ARIA role for assistive technology.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #4c1d95;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 40rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
display: grid;	Turns the element into a grid container.
gap: 1rem;	Space between grid or flex items without extra margins.
border-radius: 10px;	Rounds the corners.
border: 1px solid;	Changes the visual order of a flex item without changing the source.
border-left-width: 6px;	A thick left border used as an accent stripe.
background: #eff6ff;	Background colour or image.
border-color: #60a5fa;	The line around the element: width, style and colour.

Check your work

- Each message has a text label
- Contrast passes for all four
- Shared styles in one rule
- role used correctly

Exercises

1. Add a close button that hides the alert with JavaScript.
2. Add icons with ::before.
3. Add a dark mode variant.

Theme data for this project

Field	Value
Business	Luxor Music Academy
Tagline	Oud, piano, guitar and voice lessons
City	Luxor
Owner	Salma Ragab
Brand colour	#4c1d95
Accent colour	#f5f3ff
Offers	Oud for beginners (1600 EGP); Piano grade 1 (1800 EGP); Guitar chords (1400 EGP); Voice coaching (1500 EGP)

<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
Message styles	The main heading; only one per page.
<p class="alert info" role="status">Info: Ismailia...	A paragraph of text.
<p class="alert success" role="status">Success: Yo...	Strong importance (bold by default).
<p class="alert warning" role="alert">Warning: Onl...	Gives the element an ARIA role for assistive technology.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #dc2626;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 40rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
display: grid;	Turns the element into a grid container.
gap: 1rem;	Space between grid or flex items without extra margins.
border-radius: 10px;	Rounds the corners.
border: 1px solid;	Changes the visual order of a flex item without changing the source.
border-left-width: 6px;	A thick left border used as an accent stripe.
background: #eff6ff;	Background colour or image.
border-color: #60a5fa;	The line around the element: width, style and colour.

Check your work

- Each message has a text label
- Contrast passes for all four
- Shared styles in one rule
- role used correctly

Exercises

1. Add a close button that hides the alert with JavaScript.
2. Add icons with ::before.
3. Add a dark mode variant.

Theme data for this project

Field	Value
Business	Ismailia Cycling Store
Tagline	Bikes, parts and Friday group rides
City	Ismailia
Owner	Bassem Adly
Brand colour	#dc2626
Accent colour	#fef2f2
Offers	City bike (6500 EGP); Mountain bike (11000 EGP); Kids bike (3200 EGP); Tune-up (250 EGP)

Project 850: Alert message components for Minya Coding Club

Theme: Minya Coding Club (Minya) | Level 1 | Files: index.html, styles.css

Brief

Create four message styles (info, success, warning, error) with colour, a thick left border and a text prefix so meaning does not rely on colour alone.

Learning goals

- Build reusable component classes
- Use role=status and role=alert
- Use border shorthand then override one side

Elements and CSS used

HTML elements	CSS features
p, strong	border: 1px solid, border-left-width, border-color, background, class modifiers

Build guide

1. Write four paragraphs with the shared class alert and a modifier class.
2. Prefix each with a strong label.
3. Add role attributes.
4. Style .alert once with padding, radius and a 1px border.
5. Set border-left-width: 6px.
6. Set colours per modifier.

Project 850: index.html

```
<!DOCTYPE html>
<html lang="en">

Project type: Booking form in three steps

Level 2 | 25 projects, one per theme

Build a longer form divided into three fieldsets: radio choice with prices, date/time/number inputs, and personal details with a required checkbox.

Project 851: Booking form in three steps for Cairo Book Shop

Theme: Cairo Book Shop (Giza) | Level 2 | Files: index.html, styles.css

Brief

Build a longer form divided into three fieldsets: radio choice with prices, date/time/number inputs, and personal details with a required checkbox.

Learning goals

- Group related controls with fieldset and legend
- Use date, time, number and tel input types with min/max/step
- Use wrapping labels

Elements and CSS used

HTML elements	CSS features
form, fieldset, legend, label, input (radio, date, time, number, text, tel, checkbox), small, button	fieldset border/radius, legend, display: flex on label, margin-left: auto, :not() chains

Build guide

1. Write three fieldsets with legends numbered 1 to 3.
2. Step 1: radio buttons with the same name, each wrapped in a label with the price in <small>.
3. Step 2: date, time and number inputs with limits.
4. Step 3: text, tel and a required checkbox.
5. Grid the form and fieldsets.

6. Push prices right with margin-left: auto.

Project 851: index.html

Project 853: Booking form in three steps for Pyramid Fitness

Theme: Pyramid Fitness (6th of October) | Level 2 | Files: index.html, styles.css

Brief

Build a longer form divided into three fieldsets: radio choice with prices, date/time/number inputs, and personal details with a required checkbox.

Learning goals

- Group related controls with fieldset and legend
- Use date, time, number and tel input types with min/max/step
- Use wrapping labels

Elements and CSS used

HTML elements	CSS features
form, fieldset, legend, label, input (radio, date, time, number, text, tel, checkbox), small, button	fieldset border/radius, legend, display: flex on label, margin-left: auto, :not() chains

Build guide

1. Write three fieldsets with legends numbered 1 to 3.
2. Step 1: radio buttons with the same name, each wrapped in a label with the price in <small>.
3. Step 2: date, time and number inputs with limits.
4. Step 3: text, tel and a required checkbox.
5. Grid the form and fieldsets.
6. Push prices right with margin-left: auto.

Project 853 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Pyramid Fitness - Booking</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
Book a class	The main heading; only one per page.
<form action="/book" method="post" class="wizard">	A form; action is where the data goes, method how it is sent.
<fieldset>	Groups related form controls.
<legend>1. Choose a class</legend>	Caption for the fieldset.
<label><input type="radio" name="item" value="Morning yoga" require...	Text label for a control; for matches the control's id, or the label wraps the control.
<label><input type="radio" name="item" value="Strength circuit" req...	Radio button: one choice from a group sharing the same name.

Line	What it does
<label><input type="radio" name="item" value="Spinning" required> S...	A form control; its type decides what it looks like.
<label><input type="radio" name="item" value="Personal training" re...	The field must be filled before the form can be submitted.
<label>Date <input type="date" name="date" required min="2026-09-11...	Date picker.
<label>Time <input type="time" name="time" required step="1800"></l...	Time picker.
<label>People <input type="number" name="people" min="1" max="10" v...	Numeric input with min, max and step.
<label>Name <input type="text" name="name" required autocomplete="n...	Tells the browser which saved value to offer (name, email, tel...).
<label>Phone <input type="tel" name="phone" required autocomplete="...	Telephone number; shows the phone keypad on mobiles.
<label><input type="checkbox" name="terms" required> I agree to the...	Checkbox: on or off.
<button type="submit">Confirm booking</button>	A clickable button; inside a form it submits by default.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #0f766e;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 40rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
display: grid;	Turns the element into a grid container.
gap: 1.5rem;	Space between grid or flex items without extra margins.
border: 1px solid var(--line);	Changes the visual order of a flex item without changing the source.
border-radius: 12px;	Rounds the corners.
font-weight: 700;	Thickness of the text.
display: flex;	Turns the element into a flex container (one-dimensional layout).
align-items: center;	Centres items on the cross axis.

Declaration	What it does
flex-wrap: wrap;	Allows flex items to move to a new line when they do not fit.
input:not([type="radio"]):not([type="checkbox"]) {	Excludes elements from a selector.
border: 1px solid #bbb;	The line around the element: width, style and colour.
font: inherit;	Makes form controls use the page font instead of the browser default.
flex: 1 1 8rem;	The item can grow and shrink from the given basis.
border: 0;	Removes the default border (for example on an iframe or button).
border-radius: 999px;	Fully rounded pill shape.
background: var(--brand);	Background colour or image.

Check your work

- Radios share one name
- Date min prevents past dates
- Every control labelled
- Checkbox required works

Exercises

1. Show one fieldset at a time with :has() and radio state or JavaScript.
2. Add a summary panel that updates live.
3. Add a progress tracker on top.

Theme data for this project

border: 1px solid #bbb;	The line around the element: width, style and colour.
font: inherit;	Makes form controls use the page font instead of the browser default.
flex: 1 1 8rem;	The item can grow and shrink from the given basis.
border: 0;	Removes the default border (for example on an iframe or button).
border-radius: 999px;	Fully rounded pill shape.
background: var(--brand);	Background colour or image.

Check your work

- Radios share one name
- Date min prevents past dates
- Every control labelled
- Checkbox required works

Exercises

1. Show one fieldset at a time with :has() and radio state or JavaScript.
2. Add a summary panel that updates live.
3. Add a progress tracker on top.

Theme data for this project

Field	Value
Business	Red Sea Travel
Tagline	Discover Egypt from desert to reef
City	Hurghada
Owner	Laila Mansour
Brand colour	#0369a1
Accent colour	#f0f9ff
Offers	Luxor day trip (1200 EGP); Snorkelling (700 EGP); Desert safari (900 EGP); Nile cruise (6500 EGP)

Project 856: Booking form in three steps for Lotus Language School

Theme: Lotus Language School (Alexandria) | Level 2 | Files: index.html, styles.css

Brief

Build a longer form divided into three fieldsets: radio choice with prices, date/time/number inputs, and personal details with a required checkbox.

Learning goals

- Group related controls with fieldset and legend
- Use date, time, number and tel input types with min/max/step
- Use wrapping labels

Elements and CSS used

HTML elements	CSS features
form, fieldset, legend, label, input (radio, date, time, number, text, tel, checkbox), small, button	fieldset border/radius, legend, display: flex on label, margin-left: auto, :not() chains

Build guide

1. Write three fieldsets with legends numbered 1 to 3.
2. Step 1: radio buttons with the same name, each wrapped in a label with the price in <small>.
3. Step 2: date, time and number inputs with limits.
4. Step 3: text, tel and a required checkbox.
5. Grid the form and fieldsets.

6. Push prices right with margin-left: auto.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #7c3aed;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 40rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
display: grid;	Turns the element into a grid container.
gap: 1.5rem;	Space between grid or flex items without extra margins.
border: 1px solid var(--line);	Changes the visual order of a flex item without changing the source.
border-radius: 12px;	Rounds the corners.
font-weight: 700;	Thickness of the text.
display: flex;	Turns the element into a flex container (one-dimensional layout).
align-items: center;	Centres items on the cross axis.

Declaration	What it does
flex-wrap: wrap;	Allows flex items to move to a new line when they do not fit.
input:not([type="radio"]):not([type="checkbox"]) {	Excludes elements from a selector.
border: 1px solid #bbb;	The line around the element: width, style and colour.
font: inherit;	Makes form controls use the page font instead of the browser default.
flex: 1 1 8rem;	The item can grow and shrink from the given basis.
border: 0;	Removes the default border (for example on an iframe or button).
border-radius: 999px;	Fully rounded pill shape.

box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #92400e;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 40rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
display: grid;	Turns the element into a grid container.
gap: 1.5rem;	Space between grid or flex items without extra margins.
border: 1px solid var(--line);	Changes the visual order of a flex item without changing the source.
border-radius: 12px;	Rounds the corners.
font-weight: 700;	Thickness of the text.
display: flex;	Turns the element into a flex container (one-dimensional layout).
align-items: center;	Centres items on the cross axis.

Declaration	What it does
flex-wrap: wrap;	Allows flex items to move to a new line when they do not fit.
input:not([type="radio"]):not([type="checkbox"]) {	Excludes elements from a selector.
border: 1px solid #bbb;	The line around the element: width, style and colour.
font: inherit;	Makes form controls use the page font instead of the browser default.
flex: 1 1 8rem;	The item can grow and shrink from the given basis.
border: 0;	Removes the default border (for example on an iframe or button).
border-radius: 999px;	Fully rounded pill shape.
background: var(--brand);	Background colour or image.

Check your work

- Radios share one name
- Date min prevents past dates
- Every control labelled
- Checkbox required works

Exercises

1. Show one fieldset at a time with :has() and radio state or JavaScript.
2. Add a summary panel that updates live.
3. Add a progress tracker on top.

Theme data for this project

Field	Value
Business	Sinai Trekking Club
Tagline	Guided mountain walks for every level
City	Saint Catherine
Owner	Yara Hamdy
Brand colour	#92400e
Accent colour	#fffbeb
Offers	Mount Sinai sunrise (400 EGP); Blue Desert loop (250 EGP); Wadi Gnai (300 EGP); Three-day traverse (1900 EGP)

Project 859: Booking form in three steps for Horizon Photography

Theme: Horizon Photography (Maadi) | Level 2 | Files: index.html, styles.css

Brief

Build a longer form divided into three fieldsets: radio choice with prices, date/time/number inputs, and personal details with a required checkbox.

Learning goals

- Group related controls with fieldset and legend
- Use date, time, number and tel input types with min/max/step
- Use wrapping labels

Elements and CSS used

HTML elements	CSS features
form, fieldset, legend, label, input (radio, date, time, number, text, tel, checkbox), small, button	fieldset border/radius, legend, display: flex on label, margin-left: auto, :not() chains

Build guide

1. Write three fieldsets with legends numbered 1 to 3.
2. Step 1: radio buttons with the same name, each wrapped in a label with the price in <small>.
3. Step 2: date, time and number inputs with limits.
4. Step 3: text, tel and a required checkbox.
5. Grid the form and fieldsets.

6. Push prices right with margin-left: auto.

<label>Date <input type="date" name="date" required min="2026-09-11...	Date picker.
<label>Time <input type="time" name="time" required step="1800"></l...	Time picker.
<label>People <input type="number" name="people" min="1" max="10" v...	Numeric input with min, max and step.
<label>Name <input type="text" name="name" required autocomplete="n...	Tells the browser which saved value to offer (name, email, tel...).
<label>Phone <input type="tel" name="phone" required autocomplete="...	Telephone number; shows the phone keypad on mobiles.
<label><input type="checkbox" name="terms" required> I agree to the...	Checkbox: on or off.
<button type="submit">Confirm booking</button>	A clickable button; inside a form it submits by default.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #15803d;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 40rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
display: grid;	Turns the element into a grid container.
gap: 1.5rem;	Space between grid or flex items without extra margins.
border: 1px solid var(--line);	Changes the visual order of a flex item without changing the source.
border-radius: 12px;	Rounds the corners.
font-weight: 700;	Thickness of the text.
display: flex;	Turns the element into a flex container (one-dimensional layout).

Declaration	What it does
align-items: center;	Centres items on the cross axis.
flex-wrap: wrap;	Allows flex items to move to a new line when they do not fit.
input:not([type="radio"]):not([type="checkbox"]) {	Excludes elements from a selector.
border: 1px solid #bbb;	The line around the element: width, style and colour.
font: inherit;	Makes form controls use the page font instead of the browser default.
flex: 1 1 8rem;	The item can grow and shrink from the given basis.
border: 0;	Removes the default border (for example on an iframe or button).
border-radius: 999px;	Fully rounded pill shape.
background: var(--brand);	Background colour or image.

Check your work

- Radios share one name
- Date min prevents past dates
- Every control labelled
- Checkbox required works

Exercises

1. Show one fieldset at a time with :has() and radio state or JavaScript.
2. Add a summary panel that updates live.
3. Add a progress tracker on top.

Theme data for this project

Field	Value
Business	Oasis Plant Nursery
Tagline	Indoor plants and gardening advice
City	Sheikh Zayed
Owner	Hossam Ali
Brand colour	#15803d
Accent colour	#f7fee7
Offers	Monstera (250 EGP); Snake plant (120 EGP); Basil pot (45 EGP); Olive tree (600 EGP)

Project 862: Booking form in three steps for Cedar Furniture

Theme: Cedar Furniture (Damietta) | Level 2 | Files: index.html, styles.css

Brief

Build a longer form divided into three fieldsets: radio choice with prices, date/time/number inputs, and personal details with a required checkbox.

Learning goals

- Group related controls with fieldset and legend
- Use date, time, number and tel input types with min/max/step
- Use wrapping labels

Elements and CSS used

HTML elements	CSS features
form, fieldset, legend, label, input (radio, date, time, number, text, tel, checkbox), small, button	fieldset border/radius, legend, display: flex on label, margin-left: auto, :not() chains

Build guide

1. Write three fieldsets with legends numbered 1 to 3.
2. Step 1: radio buttons with the same name, each wrapped in a label with the price in <small>.
3. Step 2: date, time and number inputs with limits.
4. Step 3: text, tel and a required checkbox.
5. Grid the form and fieldsets.

6. Push prices right with margin-left: auto.

<label>Phone <input type="tel" name="phone" required autocomplete="...	Telephone number; shows the phone keypad on mobiles.
<label><input type="checkbox" name="terms" required> I agree to the...	Checkbox: on or off.
<button type="submit">Confirm booking</button>	A clickable button; inside a form it submits by default.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #c2410c;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 40rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
display: grid;	Turns the element into a grid container.
gap: 1.5rem;	Space between grid or flex items without extra margins.
border: 1px solid var(--line);	Changes the visual order of a flex item without changing the source.
border-radius: 12px;	Rounds the corners.
font-weight: 700;	Thickness of the text.
display: flex;	Turns the element into a flex container (one-dimensional layout).
align-items: center;	Centres items on the cross axis.

Declaration	What it does
flex-wrap: wrap;	Allows flex items to move to a new line when they do not fit.
input:not([type="radio"]):not([type="checkbox"]) {	Excludes elements from a selector.
border: 1px solid #bbb;	The line around the element: width, style and colour.
font: inherit;	Makes form controls use the page font instead of the browser default.
flex: 1 1 8rem;	The item can grow and shrink from the given basis.
border: 0;	Removes the default border (for example on an iframe or button).
border-radius: 999px;	Fully rounded pill shape.
background: var(--brand);	Background colour or image.

Check your work

- Radios share one name
- Date min prevents past dates
- Every control labelled
- Checkbox required works

Exercises

1. Show one fieldset at a time with :has() and radio state or JavaScript.
2. Add a summary panel that updates live.
3. Add a progress tracker on top.

Theme data for this project

Field	Value
Business	Sahara Pet Care
Tagline	Grooming, boarding and vet visits
City	New Cairo
Owner	Rana Ibrahim
Brand colour	#c2410c
Accent colour	#fff7ed
Offers	Full grooming (400 EGP); Day boarding (250 EGP); Vaccination (300 EGP); Dog walking (100 EGP)

Project 865: Booking form in three steps for Alexandria Sailing School

Theme: Alexandria Sailing School (Alexandria) | Level 2 | Files: index.html, styles.css

Brief

Build a longer form divided into three fieldsets: radio choice with prices, date/time/number inputs, and personal details with a required checkbox.

Learning goals

- Group related controls with fieldset and legend
- Use date, time, number and tel input types with min/max/step
- Use wrapping labels

Elements and CSS used

HTML elements	CSS features
form, fieldset, legend, label, input (radio, date, time, number, text, tel, checkbox), small, button	fieldset border/radius, legend, display: flex on label, margin-left: auto, :not() chains

Build guide

1. Write three fieldsets with legends numbered 1 to 3.
2. Step 1: radio buttons with the same name, each wrapped in a label with the price in <small>.
3. Step 2: date, time and number inputs with limits.
4. Step 3: text, tel and a required checkbox.
5. Grid the form and fieldsets.

6. Push prices right with margin-left: auto.

- Checkbox required works

Exercises

1. Show one fieldset at a time with :has() and radio state or JavaScript.
2. Add a summary panel that updates live.
3. Add a progress tracker on top.

Theme data for this project

Field	Value
Business	Fayoum Pottery Studio
Tagline	Wheel throwing and glazing classes
City	Tunis Village
Owner	Ahmed Mahmoud
Brand colour	#9a3412
Accent colour	#fff7ed
Offers	Intro to the wheel (450 EGP); Glazing day (300 EGP); Kids clay class (200 EGP); Weekend retreat (2500 EGP)

Project 868: Booking form in three steps for Cleopatra Beauty Salon

Theme: Cleopatra Beauty Salon (Dokki) | Level 2 | Files: index.html, styles.css

Brief

Build a longer form divided into three fieldsets: radio choice with prices, date/time/number inputs, and personal details with a required checkbox.

Learning goals

- Group related controls with fieldset and legend
- Use date, time, number and tel input types with min/max/step
- Use wrapping labels

Elements and CSS used

HTML elements	CSS features
form, fieldset, legend, label, input (radio, date, time, number, text, tel, checkbox), small, button	fieldset border/radius, legend, display: flex on label, margin-left: auto, :not() chains

Build guide

1. Write three fieldsets with legends numbered 1 to 3.
2. Step 1: radio buttons with the same name, each wrapped in a label with the price in <small>.
3. Step 2: date, time and number inputs with limits.
4. Step 3: text, tel and a required checkbox.
5. Grid the form and fieldsets.

6. Push prices right with margin-left: auto.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #4c1d95;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 40rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
display: grid;	Turns the element into a grid container.
gap: 1.5rem;	Space between grid or flex items without extra margins.
border: 1px solid var(--line);	Changes the visual order of a flex item without changing the source.
border-radius: 12px;	Rounds the corners.
font-weight: 700;	Thickness of the text.
display: flex;	Turns the element into a flex container (one-dimensional layout).
align-items: center;	Centres items on the cross axis.

Declaration	What it does
flex-wrap: wrap;	Allows flex items to move to a new line when they do not fit.
input:not([type="radio"]):not([type="checkbox"]) {	Excludes elements from a selector.
border: 1px solid #bbb;	The line around the element: width, style and colour.
font: inherit;	Makes form controls use the page font instead of the browser default.
flex: 1 1 8rem;	The item can grow and shrink from the given basis.
border: 0;	Removes the default border (for example on an iframe or button).
border-radius: 999px;	Fully rounded pill shape.
background: var(--brand);	Background colour or image.

Check your work

- Radios share one name
- Date min prevents past dates
- Every control labelled
- Checkbox required works

Exercises

1. Show one fieldset at a time with :has() and radio state or JavaScript.
2. Add a summary panel that updates live.
3. Add a progress tracker on top.

Theme data for this project

Field	Value
Business	Luxor Music Academy
Tagline	Oud, piano, guitar and voice lessons
City	Luxor
Owner	Salma Ragab
Brand colour	#4c1d95
Accent colour	#f5f3ff
Offers	Oud for beginners (1600 EGP); Piano grade 1 (1800 EGP); Guitar chords (1400 EGP); Voice coaching (1500 EGP)

Project 871: Booking form in three steps for Port Said Seafood

Theme: Port Said Seafood (Port Said) | Level 2 | Files: index.html, styles.css

Brief

Build a longer form divided into three fieldsets: radio choice with prices, date/time/number inputs, and personal details with a required checkbox.

Learning goals

- Group related controls with fieldset and legend
- Use date, time, number and tel input types with min/max/step
- Use wrapping labels

Elements and CSS used

HTML elements	CSS features
form, fieldset, legend, label, input (radio, date, time, number, text, tel, checkbox), small, button	fieldset border/radius, legend, display: flex on label, margin-left: auto, :not() chains

Build guide

1. Write three fieldsets with legends numbered 1 to 3.
2. Step 1: radio buttons with the same name, each wrapped in a label with the price in <small>.
3. Step 2: date, time and number inputs with limits.
4. Step 3: text, tel and a required checkbox.
5. Grid the form and fieldsets.

6. Push prices right with margin-left: auto.

<label><input type="checkbox" name="terms" required> I agree to the...	Checkbox: on or off.
<button type="submit">Confirm booking</button>	A clickable button; inside a form it submits by default.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #b45309;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 40rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
display: grid;	Turns the element into a grid container.
gap: 1.5rem;	Space between grid or flex items without extra margins.
border: 1px solid var(--line);	Changes the visual order of a flex item without changing the source.
border-radius: 12px;	Rounds the corners.
font-weight: 700;	Thickness of the text.
display: flex;	Turns the element into a flex container (one-dimensional layout).
align-items: center;	Centres items on the cross axis.

Declaration	What it does
flex-wrap: wrap;	Allows flex items to move to a new line when they do not fit.
input:not([type="radio"]):not([type="checkbox"]) {	Excludes elements from a selector.
border: 1px solid #bbb;	The line around the element: width, style and colour.
font: inherit;	Makes form controls use the page font instead of the browser default.
flex: 1 1 8rem;	The item can grow and shrink from the given basis.
border: 0;	Removes the default border (for example on an iframe or button).
border-radius: 999px;	Fully rounded pill shape.
background: var(--brand);	Background colour or image.

Check your work

- Radios share one name
- Date min prevents past dates
- Every control labelled
- Checkbox required works

Exercises

1. Show one fieldset at a time with :has() and radio state or JavaScript.
2. Add a summary panel that updates live.
3. Add a progress tracker on top.

Theme data for this project

Field	Value
Business	Nubian Guest House
Tagline	Colourful rooms on the west bank of the Nile
City	Aswan
Owner	Fatma Hassan
Brand colour	#b45309
Accent colour	#fffbeb
Offers	Garden room (900 EGP); Nile view suite (1800 EGP); Family room (1500 EGP); Rooftop dorm (300 EGP)

Project 874: Booking form in three steps for Ismailia Cycling Store

Theme: Ismailia Cycling Store (Ismailia) | Level 2 | Files: index.html, styles.css

Brief

Build a longer form divided into three fieldsets: radio choice with prices, date/time/number inputs, and personal details with a required checkbox.

Learning goals

- Group related controls with fieldset and legend
- Use date, time, number and tel input types with min/max/step
- Use wrapping labels

Elements and CSS used

HTML elements	CSS features
form, fieldset, legend, label, input (radio, date, time, number, text, tel, checkbox), small, button	fieldset border/radius, legend, display: flex on label, margin-left: auto, :not() chains

Build guide

1. Write three fieldsets with legends numbered 1 to 3.
2. Step 1: radio buttons with the same name, each wrapped in a label with the price in <small>.
3. Step 2: date, time and number inputs with limits.
4. Step 3: text, tel and a required checkbox.
5. Grid the form and fieldsets.

6. Push prices right with margin-left: auto.

Theme data for this project

Field	Value
Business	Minya Coding Club
Tagline	Free weekend coding for teenagers
City	Minya
Owner	Youssef Hany
Brand colour	#2563eb
Accent colour	#eff6ff
Offers	HTML weekend (Free); CSS art (Free); Scratch games (Free); Hackathon (Free)

Project type: Video and audio page

Level 2 | 25 projects, one per theme

Embed a video with two source formats, poster image, English and Arabic caption tracks and a fallback link, plus an audio player with a transcript link.

Project 876: Video and audio page for Cairo Book Shop

Theme: Cairo Book Shop (Giza) | Level 2 | Files: index.html, styles.css

Brief

Embed a video with two source formats, poster image, English and Arabic caption tracks and a fallback link, plus an audio player with a transcript link.

Learning goals

- Provide multiple sources and captions
- Use preload and poster sensibly
- Keep media responsive with aspect-ratio

Elements and CSS used

HTML elements	CSS features
figure, video, source, track, p, a, figcaption, audio	aspect-ratio: 16 / 9, width: 100%, background, border-radius, max-width

Build guide

1. Write the video with controls, poster and dimensions.
2. Add WebM then MP4 sources.
3. Add caption tracks; mark one default.
4. Add fallback content inside the video.
5. Add the audio element and transcript link.
6. Make the video fluid.

Project 876 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Cairo Book Shop - Video tour</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
Take a tour of Cairo Book Shop	The main heading; only one per page.
<figure class="video">	Self-contained media with an optional caption.
<video controls preload="metadata" poster="images/poster.jpg" width...	Video player; controls shows the built-in buttons.
<source src="media/tour.webm" type="video/webm">	One media source with its MIME type.
<track kind="captions" src="media/tour.en.vtt" srclang="en" label="...	Captions or subtitles file for media.

Line	What it does
<track kind="captions" src="media/tour.ar.vtt" srclang="ar" label="...	A table row.
Your browser cannot play this video. <a href="media/tour.mp4">Do...	A paragraph of text.
<figcaption>A two-minute walk through our Giza location with Mohame...	Caption for the figure.
Listen to our story	Second-level heading for a section.
<audio controls preload="none" src="media/story.mp3"></audio>	Audio player.
Read the transcript	A hyperlink; href gives the destination.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #b90000;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.

Declaration	What it does
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 56rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
width: 100%;	Fills the container width.
height: auto;	Keeps the natural height, preserving image proportions.
aspect-ratio: 16 / 9;	Keeps a fixed width-to-height ratio, reserving space before media loads.
background: #000;	Background colour or image.
border-radius: 12px;	Rounds the corners.

Check your work

- Captions toggle appears in the player
- Video never wider than container
- Fallback link present
- Audio has a transcript

Exercises

1. Add chapters with kind="chapters".
2. Add a custom play button overlay.
3. Lazy-load the video with loading="lazy" on an iframe embed instead.

Theme data for this project

Field	Value
Business	Cairo Book Shop
Tagline	PDF and printed books about web development
City	Giza
Owner	Mohamed Khattab
Brand colour	#b90000
Accent colour	#f4f1ea
Offers	Learn HTML (120 EGP); CSS in Practice (150 EGP); JavaScript Basics (180 EGP); Web Accessibility (95 EGP)

Project 877: Video and audio page for Nile Bakery

Theme: Nile Bakery (Cairo) | Level 2 | Files: index.html, styles.css

Brief

Embed a video with two source formats, poster image, English and Arabic caption tracks and a fallback link, plus an audio player with a transcript link.

Learning goals

- Provide multiple sources and captions
- Use preload and poster sensibly
- Keep media responsive with aspect-ratio

Elements and CSS used

HTML elements	CSS features
figure, video, source, track, p, a, figcaption, audio	aspect-ratio: 16 / 9, width: 100%, background, border-radius, max-width

Build guide

1. Write the video with controls, poster and dimensions.
2. Add WebM then MP4 sources.
3. Add caption tracks; mark one default.
4. Add fallback content inside the video.
5. Add the audio element and transcript link.
6. Make the video fluid.

Project 877: index.html

Project 880 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Red Sea Travel - Video tour</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
Take a tour of Red Sea Travel	The main heading; only one per page.
<figure class="video">	Self-contained media with an optional caption.
<video controls preload="metadata" poster="images/poster.jpg" width...	Video player; controls shows the built-in buttons.
<source src="media/tour.webm" type="video/webm">	One media source with its MIME type.
<track kind="captions" src="media/tour.en.vtt" srclang="en" label="...	Captions or subtitles file for media.

Line	What it does
<track kind="captions" src="media/tour.ar.vtt" srclang="ar" label="...	A table row.
Your browser cannot play this video. <a href="media/tour.mp4">Do...	A paragraph of text.
<figcaption>A two-minute walk through our Hurghada location with La...	Caption for the figure.
Listen to our story	Second-level heading for a section.
<audio controls preload="none" src="media/story.mp3"></audio>	Audio player.
Read the transcript	A hyperlink; href gives the destination.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #0369a1;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.

Declaration	What it does
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 56rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
width: 100%;	Fills the container width.
height: auto;	Keeps the natural height, preserving image proportions.
aspect-ratio: 16 / 9;	Keeps a fixed width-to-height ratio, reserving space before media loads.
background: #000;	Background colour or image.
border-radius: 12px;	Rounds the corners.

Check your work

- Captions toggle appears in the player
- Video never wider than container
- Fallback link present
- Audio has a transcript

Exercises

1. Add chapters with kind="chapters".
2. Add a custom play button overlay.
3. Lazy-load the video with loading="lazy" on an iframe embed instead.

Theme data for this project

Field	Value
Business	Red Sea Travel
Tagline	Discover Egypt from desert to reef
City	Hurghada
Owner	Laila Mansour
Brand colour	#0369a1
Accent colour	#f0f9ff
Offers	Luxor day trip (1200 EGP); Snorkelling (700 EGP); Desert safari (900 EGP); Nile cruise (6500 EGP)

Project 881: Video and audio page for Lotus Language School

Theme: Lotus Language School (Alexandria) | Level 2 | Files: index.html, styles.css

Brief

Embed a video with two source formats, poster image, English and Arabic caption tracks and a fallback link, plus an audio player with a transcript link.

Learning goals

- Provide multiple sources and captions
- Use preload and poster sensibly
- Keep media responsive with aspect-ratio

Elements and CSS used

HTML elements	CSS features
figure, video, source, track, p, a, figcaption, audio	aspect-ratio: 16 / 9, width: 100%, background, border-radius, max-width

Build guide

1. Write the video with controls, poster and dimensions.
2. Add WebM then MP4 sources.
3. Add caption tracks; mark one default.
4. Add fallback content inside the video.
5. Add the audio element and transcript link.
6. Make the video fluid.

Project 881: index.html

Project 884 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Horizon Photography - Video tour</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
Take a tour of Horizon Photography	The main heading; only one per page.
<figure class="video">	Self-contained media with an optional caption.
<video controls preload="metadata" poster="images/poster.jpg" width...	Video player; controls shows the built-in buttons.
<source src="media/tour.webm" type="video/webm">	One media source with its MIME type.
<track kind="captions" src="media/tour.en.vtt" srclang="en" label="...	Captions or subtitles file for media.

Line	What it does
<track kind="captions" src="media/tour.ar.vtt" srclang="ar" label="...	A table row.
Your browser cannot play this video. <a href="media/tour.mp4">Do...	A paragraph of text.
<figcaption>A two-minute walk through our Maadi location with Adham...	Caption for the figure.
Listen to our story	Second-level heading for a section.
<audio controls preload="none" src="media/story.mp3"></audio>	Audio player.
Read the transcript	A hyperlink; href gives the destination.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #111827;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.

Declaration	What it does
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 56rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
width: 100%;	Fills the container width.
height: auto;	Keeps the natural height, preserving image proportions.
aspect-ratio: 16 / 9;	Keeps a fixed width-to-height ratio, reserving space before media loads.
background: #000;	Background colour or image.
border-radius: 12px;	Rounds the corners.

Check your work

- Captions toggle appears in the player
- Video never wider than container
- Fallback link present
- Audio has a transcript

Exercises

1. Add chapters with kind="chapters".
2. Add a custom play button overlay.
3. Lazy-load the video with loading="lazy" on an iframe embed instead.

Theme data for this project

Field	Value
Business	Horizon Photography
Tagline	Portraits, weddings and product photography
City	Maadi
Owner	Adham Nabil
Brand colour	#111827
Accent colour	#f3f4f6
Offers	Portrait session (1200 EGP); Wedding day (15000 EGP); Product shoot (900 EGP); Family session (1500 EGP)

Project 885: Video and audio page for Papyrus Stationery

Theme: Papyrus Stationery (Heliopolis) | Level 2 | Files: index.html, styles.css

Brief

Embed a video with two source formats, poster image, English and Arabic caption tracks and a fallback link, plus an audio player with a transcript link.

Learning goals

- Provide multiple sources and captions
- Use preload and poster sensibly
- Keep media responsive with aspect-ratio

Elements and CSS used

HTML elements	CSS features
figure, video, source, track, p, a, figcaption, audio	aspect-ratio: 16 / 9, width: 100%, background, border-radius, max-width

Build guide

1. Write the video with controls, poster and dimensions.
2. Add WebM then MP4 sources.
3. Add caption tracks; mark one default.
4. Add fallback content inside the video.
5. Add the audio element and transcript link.
6. Make the video fluid.

Project 885: index.html

Project 888 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Byte Repair - Video tour</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
Take a tour of Byte Repair	The main heading; only one per page.
<figure class="video">	Self-contained media with an optional caption.
<video controls preload="metadata" poster="images/poster.jpg" width...	Video player; controls shows the built-in buttons.
<source src="media/tour.webm" type="video/webm">	One media source with its MIME type.
<track kind="captions" src="media/tour.en.vtt" srclang="en" label="...	Captions or subtitles file for media.

Line	What it does
<track kind="captions" src="media/tour.ar.vtt" srclang="ar" label="...	A table row.
Your browser cannot play this video. <a href="media/tour.mp4">Do...	A paragraph of text.
<figcaption>A two-minute walk through our Nasr City location with M...	Caption for the figure.
Listen to our story	Second-level heading for a section.
<audio controls preload="none" src="media/story.mp3"></audio>	Audio player.
Read the transcript	A hyperlink; href gives the destination.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #0891b2;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.

Declaration	What it does
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 56rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
width: 100%;	Fills the container width.
height: auto;	Keeps the natural height, preserving image proportions.
aspect-ratio: 16 / 9;	Keeps a fixed width-to-height ratio, reserving space before media loads.
background: #000;	Background colour or image.
border-radius: 12px;	Rounds the corners.

Check your work

- Captions toggle appears in the player
- Video never wider than container
- Fallback link present
- Audio has a transcript

Exercises

1. Add chapters with kind="chapters".
2. Add a custom play button overlay.
3. Lazy-load the video with loading="lazy" on an iframe embed instead.

Theme data for this project

Field	Value
Business	Byte Repair
Tagline	Phone and laptop repairs while you wait
City	Nasr City
Owner	Mostafa Gamal
Brand colour	#0891b2
Accent colour	#ecfeff
Offers	Screen replacement (From 800 EGP); Battery swap (From 500 EGP); Laptop cleaning (350 EGP); Data recovery (From 1200 EGP)

Project 889: Video and audio page for Sahara Pet Care

Theme: Sahara Pet Care (New Cairo) | Level 2 | Files: index.html, styles.css

Brief

Embed a video with two source formats, poster image, English and Arabic caption tracks and a fallback link, plus an audio player with a transcript link.

Learning goals

- Provide multiple sources and captions
- Use preload and poster sensibly
- Keep media responsive with aspect-ratio

Elements and CSS used

HTML elements	CSS features
figure, video, source, track, p, a, figcaption, audio	aspect-ratio: 16 / 9, width: 100%, background, border-radius, max-width

Build guide

1. Write the video with controls, poster and dimensions.
2. Add WebM then MP4 sources.
3. Add caption tracks; mark one default.
4. Add fallback content inside the video.
5. Add the audio element and transcript link.
6. Make the video fluid.

Project 889: index.html

```
<!DOCTYPE html>

Project 892 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Fayoum Pottery Studio - Video tour</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
Take a tour of Fayoum Pottery Studio	The main heading; only one per page.
<figure class="video">	Self-contained media with an optional caption.
<video controls preload="metadata" poster="images/poster.jpg" width...	Video player; controls shows the built-in buttons.
<source src="media/tour.webm" type="video/webm">	One media source with its MIME type.
<track kind="captions" src="media/tour.en.vtt" srclang="en" label="...	Captions or subtitles file for media.

Line	What it does
<track kind="captions" src="media/tour.ar.vtt" srclang="ar" label="...	A table row.
Your browser cannot play this video. <a href="media/tour.mp4">Do...	A paragraph of text.
<figcaption>A two-minute walk through our Tunis Village location wi...	Caption for the figure.
Listen to our story	Second-level heading for a section.
<audio controls preload="none" src="media/story.mp3"></audio>	Audio player.
Read the transcript	A hyperlink; href gives the destination.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #9a3412;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.

Declaration	What it does
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 56rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
width: 100%;	Fills the container width.
height: auto;	Keeps the natural height, preserving image proportions.
aspect-ratio: 16 / 9;	Keeps a fixed width-to-height ratio, reserving space before media loads.
background: #000;	Background colour or image.
border-radius: 12px;	Rounds the corners.

Check your work

- Captions toggle appears in the player
- Video never wider than container
- Fallback link present
- Audio has a transcript

Exercises

1. Add chapters with kind="chapters".
2. Add a custom play button overlay.
3. Lazy-load the video with loading="lazy" on an iframe embed instead.

Theme data for this project

Field	Value
Business	Fayoum Pottery Studio
Tagline	Wheel throwing and glazing classes
City	Tunis Village
Owner	Ahmed Mahmoud
Brand colour	#9a3412
Accent colour	#fff7ed
Offers	Intro to the wheel (450 EGP); Glazing day (300 EGP); Kids clay class (200 EGP); Weekend retreat (2500 EGP)

Project 893: Video and audio page for Cleopatra Beauty Salon

Theme: Cleopatra Beauty Salon (Dokki) | Level 2 | Files: index.html, styles.css

Brief

Embed a video with two source formats, poster image, English and Arabic caption tracks and a fallback link, plus an audio player with a transcript link.

Learning goals

- Provide multiple sources and captions
- Use preload and poster sensibly
- Keep media responsive with aspect-ratio

Elements and CSS used

HTML elements	CSS features
figure, video, source, track, p, a, figcaption, audio	aspect-ratio: 16 / 9, width: 100%, background, border-radius, max-width

Build guide

1. Write the video with controls, poster and dimensions.
2. Add WebM then MP4 sources.
3. Add caption tracks; mark one default.
4. Add fallback content inside the video.
5. Add the audio element and transcript link.
6. Make the video fluid.

Project 893: index.html

Project 896 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Port Said Seafood - Video tour</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
Take a tour of Port Said Seafood	The main heading; only one per page.
<figure class="video">	Self-contained media with an optional caption.
<video controls preload="metadata" poster="images/poster.jpg" width...	Video player; controls shows the built-in buttons.
<source src="media/tour.webm" type="video/webm">	One media source with its MIME type.
<track kind="captions" src="media/tour.en.vtt" srclang="en" label="...	Captions or subtitles file for media.

Line	What it does
<track kind="captions" src="media/tour.ar.vtt" srclang="ar" label="...	A table row.
Your browser cannot play this video. <a href="media/tour.mp4">Do...	A paragraph of text.
<figcaption>A two-minute walk through our Port Said location with S...	Caption for the figure.
Listen to our story	Second-level heading for a section.
<audio controls preload="none" src="media/story.mp3"></audio>	Audio player.
Read the transcript	A hyperlink; href gives the destination.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #0e7490;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.

Declaration	What it does
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 56rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
width: 100%;	Fills the container width.
height: auto;	Keeps the natural height, preserving image proportions.
aspect-ratio: 16 / 9;	Keeps a fixed width-to-height ratio, reserving space before media loads.
background: #000;	Background colour or image.
border-radius: 12px;	Rounds the corners.

Check your work

- Captions toggle appears in the player
- Video never wider than container
- Fallback link present
- Audio has a transcript

Exercises

1. Add chapters with kind="chapters".
2. Add a custom play button overlay.
3. Lazy-load the video with loading="lazy" on an iframe embed instead.

Theme data for this project

Field	Value
Business	Port Said Seafood
Tagline	Grilled fish straight from the boats
City	Port Said
Owner	Sherif Wahba
Brand colour	#0e7490
Accent colour	#ecfeff
Offers	Grilled sea bass (320 EGP); Shrimp tagine (280 EGP); Calamari (190 EGP); Fish soup (120 EGP)

Project 897: Video and audio page for Delta Kids Library

Theme: Delta Kids Library (Tanta) | Level 2 | Files: index.html, styles.css

Brief

Embed a video with two source formats, poster image, English and Arabic caption tracks and a fallback link, plus an audio player with a transcript link.

Learning goals

- Provide multiple sources and captions
- Use preload and poster sensibly
- Keep media responsive with aspect-ratio

Elements and CSS used

HTML elements	CSS features
figure, video, source, track, p, a, figcaption, audio	aspect-ratio: 16 / 9, width: 100%, background, border-radius, max-width

Build guide

1. Write the video with controls, poster and dimensions.
2. Add WebM then MP4 sources.
3. Add caption tracks; mark one default.
4. Add fallback content inside the video.
5. Add the audio element and transcript link.
6. Make the video fluid.

Project 897: index.html

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Minya Coding Club - Video tour</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
Take a tour of Minya Coding Club	The main heading; only one per page.
<figure class="video">	Self-contained media with an optional caption.
<video controls preload="metadata" poster="images/poster.jpg" width...	Video player; controls shows the built-in buttons.
<source src="media/tour.webm" type="video/webm">	One media source with its MIME type.
<track kind="captions" src="media/tour.en.vtt" srclang="en" label="...	Captions or subtitles file for media.

Line	What it does
<track kind="captions" src="media/tour.ar.vtt" srclang="ar" label="...	A table row.
Your browser cannot play this video. <a href="media/tour.mp4">Do...	A paragraph of text.
<figcaption>A two-minute walk through our Minya location with Youss...	Caption for the figure.
Listen to our story	Second-level heading for a section.
<audio controls preload="none" src="media/story.mp3"></audio>	Audio player.
Read the transcript	A hyperlink; href gives the destination.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #2563eb;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.

Declaration	What it does
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 56rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
width: 100%;	Fills the container width.
height: auto;	Keeps the natural height, preserving image proportions.
aspect-ratio: 16 / 9;	Keeps a fixed width-to-height ratio, reserving space before media loads.
background: #000;	Background colour or image.
border-radius: 12px;	Rounds the corners.

Check your work

- Captions toggle appears in the player
- Video never wider than container
- Fallback link present
- Audio has a transcript

Exercises

1. Add chapters with kind="chapters".
2. Add a custom play button overlay.
3. Lazy-load the video with loading="lazy" on an iframe embed instead.

Theme data for this project

Field	Value
Business	Minya Coding Club
Tagline	Free weekend coding for teenagers
City	Minya
Owner	Youssef Hany
Brand colour	#2563eb
Accent colour	#eff6ff
Offers	HTML weekend (Free); CSS art (Free); Scratch games (Free); Hackathon (Free)

Project type: Product grid with clickable cards

Level 2 | 25 projects, one per theme

List all offers as equal-height cards where the whole card is clickable via a stretched link pseudo-element and the price sticks to the bottom.

Project 901: Product grid with clickable cards for Cairo Book Shop

Theme: Cairo Book Shop (Giza) | Level 2 | Files: index.html, styles.css

Brief

List all offers as equal-height cards where the whole card is clickable via a stretched link pseudo-element and the price sticks to the bottom.

Learning goals

- Make a whole card clickable accessibly (one link, stretched)
- Push an element to the bottom with margin-top: auto
- Lift cards on hover

Elements and CSS used

HTML elements	CSS features
article, img, div, h2, a, p	position: relative + ::after inset: 0, flex-direction: column, margin-top: auto, transition, translate

Build guide

1. Write one article per offer with image, heading link, text and price.
2. Grid with auto-fill.
3. Make card and body flex columns; body flex: 1.
4. Push price down with margin-top: auto.
5. Stretch the heading link over the card with ::after and inset: 0.

6. Add the hover lift.

Project 901: index.html

```

<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Cairo Book Shop - All books</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
All books	The main heading; only one per page.
	Generic block container for grouping and layout.
<article class="card">	A self-contained piece: card, post, product.
<img src="images/bookshop-1.jpg" alt="" width="600" height="400">	An image; alt describes it, width and height reserve space before it loads.
Learn HTML	Second-level heading for a section.
From your first tag to a complete page.	A paragraph of text.

Line	What it does
CSS in Practice	A hyperlink; href gives the destination.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #b90000;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 70rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
display: grid;	Turns the element into a grid container.
gap: 1.5rem;	Space between grid or flex items without extra margins.
grid-template-columns: repeat(auto-fill, minmax(15rem, 1fr));	Defines the columns of the grid.

Declaration	What it does
display: flex;	Turns the element into a flex container (one-dimensional layout).
flex-direction: column;	Stacks flex items vertically.
border: 1px solid var(--line);	Changes the visual order of a flex item without changing the source.
border-radius: 14px;	Rounds the corners.
overflow: hidden;	Clips content that sticks out, so images follow rounded corners.
background: #fff;	Background colour or image.
position: relative;	Keeps normal flow but becomes the reference for absolutely positioned children.
transition: box-shadow .2s, translate .2s;	Soft shadow that lifts the element from the page.
.card:hover {	Applies while the pointer is over the element.
translate: 0 -3px;	Moves the element without affecting the layout of others.
width: 100%;	Fills the container width.
height: auto;	Keeps the natural height, preserving image proportions.
aspect-ratio: 3 / 2;	Keeps a fixed width-to-height ratio, reserving space before media loads.
object-fit: cover;	Crops an image to fill its box while keeping its proportions.
flex: 1;	All items share free space equally.
font-size: 1.1rem;	Size of the text.
text-decoration: none;	Removes the underline from links.

Declaration	What it does
h2 a::after {	Generated content inserted after the element's content.
content: "";	The text or empty string for a pseudo-element.
position: absolute;	Removes the element from flow and positions it relative to the nearest positioned ancestor.
inset: 0;	Shorthand for top, right, bottom and left all zero: stretches over the parent.
font-weight: 700;	Thickness of the text.

Check your work

- Only one link per card (screen readers)
- Cards equal height in a row
- Price aligned at bottom
- Hover does not shift layout

Exercises

1. Add a filter bar with radio buttons and :has().
2. Add a 'new' badge.
3. Add a sort dropdown with JavaScript.

Project 903 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Pyramid Fitness - All classes</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
All classes	The main heading; only one per page.
	Generic block container for grouping and layout.
<article class="card">	A self-contained piece: card, post, product.
<img src="images/gym-1.jpg" alt="" width="600" height="400">	An image; alt describes it, width and height reserve space before it loads.
Morning yoga	Second-level heading for a section.
Flexibility and calm, 60 minutes.	A paragraph of text.
Strength circuit	A hyperlink; href gives the destination.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #0f766e;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 70rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
display: grid;	Turns the element into a grid container.
gap: 1.5rem;	Space between grid or flex items without extra margins.
grid-template-columns: repeat(auto-fill, minmax(15rem, 1fr));	Defines the columns of the grid.
display: flex;	Turns the element into a flex container (one-dimensional layout).
flex-direction: column;	Stacks flex items vertically.

Declaration	What it does
border: 1px solid var(--line);	Changes the visual order of a flex item without changing the source.
border-radius: 14px;	Rounds the corners.
overflow: hidden;	Clips content that sticks out, so images follow rounded corners.
background: #fff;	Background colour or image.
position: relative;	Keeps normal flow but becomes the reference for absolutely positioned children.
transition: box-shadow .2s, translate .2s;	Soft shadow that lifts the element from the page.
.card:hover {	Applies while the pointer is over the element.
translate: 0 -3px;	Moves the element without affecting the layout of others.
width: 100%;	Fills the container width.
height: auto;	Keeps the natural height, preserving image proportions.
aspect-ratio: 3 / 2;	Keeps a fixed width-to-height ratio, reserving space before media loads.
object-fit: cover;	Crops an image to fill its box while keeping its proportions.
flex: 1;	All items share free space equally.
font-size: 1.1rem;	Size of the text.
text-decoration: none;	Removes the underline from links.
h2 a::after {	Generated content inserted after the element's content.
content: "";	The text or empty string for a pseudo-element.

Declaration	What it does
position: absolute;	Removes the element from flow and positions it relative to the nearest positioned ancestor.
inset: 0;	Shorthand for top, right, bottom and left all zero: stretches over the parent.
font-weight: 700;	Thickness of the text.

Check your work

- Only one link per card (screen readers)
- Cards equal height in a row
- Price aligned at bottom
- Hover does not shift layout

Exercises

1. Add a filter bar with radio buttons and :has().
2. Add a 'new' badge.
3. Add a sort dropdown with JavaScript.

Theme data for this project

Field	Value
Business	Pyramid Fitness
Tagline	Train smarter, feel stronger
City	6th of October
Owner	Omar Farouk
Brand colour	#0f766e
Accent colour	#ecfdf5
Offers	Morning yoga (100 EGP); Strength circuit (120 EGP); Spinning (110 EGP); Personal training (350 EGP)

Project 904: Product grid with clickable cards for Delta Dental Clinic

Theme: Delta Dental Clinic (Mansoura) | Level 2 | Files: index.html, styles.css

Brief

List all offers as equal-height cards where the whole card is clickable via a stretched link pseudo-element and the price sticks to the bottom.

Learning goals

- Make a whole card clickable accessibly (one link, stretched)
- Push an element to the bottom with margin-top: auto
- Lift cards on hover

Elements and CSS used

HTML elements	CSS features
article, img, div, h2, a, p	position: relative + ::after inset: 0, flex-direction: column, margin-top: auto, transition, translate

Build guide

1. Write one article per offer with image, heading link, text and price.
2. Grid with auto-fill.
3. Make card and body flex columns; body flex: 1.
4. Push price down with margin-top: auto.
5. Stretch the heading link over the card with ::after and inset: 0.

6. Add the hover lift.

Project 904: index.html

```

Project 906 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Lotus Language School - All courses</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
All courses	The main heading; only one per page.
	Generic block container for grouping and layout.
<article class="card">	A self-contained piece: card, post, product.
<img src="images/school-1.jpg" alt="" width="600" height="400">	An image; alt describes it, width and height reserve space before it loads.
English A1	Second-level heading for a section.
Beginner, 8 weeks.	A paragraph of text.
French B1	A hyperlink; href gives the destination.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #7c3aed;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 70rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
display: grid;	Turns the element into a grid container.
gap: 1.5rem;	Space between grid or flex items without extra margins.
grid-template-columns: repeat(auto-fill, minmax(15rem, 1fr));	Defines the columns of the grid.
display: flex;	Turns the element into a flex container (one-dimensional layout).
flex-direction: column;	Stacks flex items vertically.

Declaration	What it does
border: 1px solid var(--line);	Changes the visual order of a flex item without changing the source.
border-radius: 14px;	Rounds the corners.
overflow: hidden;	Clips content that sticks out, so images follow rounded corners.
background: #fff;	Background colour or image.
position: relative;	Keeps normal flow but becomes the reference for absolutely positioned children.
transition: box-shadow .2s, translate .2s;	Soft shadow that lifts the element from the page.
.card:hover {	Applies while the pointer is over the element.
translate: 0 -3px;	Moves the element without affecting the layout of others.
width: 100%;	Fills the container width.
height: auto;	Keeps the natural height, preserving image proportions.
aspect-ratio: 3 / 2;	Keeps a fixed width-to-height ratio, reserving space before media loads.
object-fit: cover;	Crops an image to fill its box while keeping its proportions.
flex: 1;	All items share free space equally.
font-size: 1.1rem;	Size of the text.
text-decoration: none;	Removes the underline from links.
h2 a::after {	Generated content inserted after the element's content.
content: "";	The text or empty string for a pseudo-element.

Declaration	What it does
position: absolute;	Removes the element from flow and positions it relative to the nearest positioned ancestor.
inset: 0;	Shorthand for top, right, bottom and left all zero: stretches over the parent.
font-weight: 700;	Thickness of the text.

Check your work

- Only one link per card (screen readers)
- Cards equal height in a row
- Price aligned at bottom
- Hover does not shift layout

Exercises

1. Add a filter bar with radio buttons and :has().
2. Add a 'new' badge.
3. Add a sort dropdown with JavaScript.

Theme data for this project

Field	Value
Business	Lotus Language School
Tagline	Learn English, French and German in small groups
City	Alexandria
Owner	Nour El Din
Brand colour	#7c3aed
Accent colour	#f5f3ff
Offers	English A1 (1800 EGP); French B1 (2200 EGP); German A2 (2000 EGP); IELTS preparation (3000 EGP)

Project 907: Product grid with clickable cards for Green Leaf Cafe

Theme: Green Leaf Cafe (Zamalek) | Level 2 | Files: index.html, styles.css

Brief

List all offers as equal-height cards where the whole card is clickable via a stretched link pseudo-element and the price sticks to the bottom.

Learning goals

- Make a whole card clickable accessibly (one link, stretched)
- Push an element to the bottom with margin-top: auto
- Lift cards on hover

Elements and CSS used

HTML elements	CSS features
article, img, div, h2, a, p	position: relative + ::after inset: 0, flex-direction: column, margin-top: auto, transition, translate

Build guide

1. Write one article per offer with image, heading link, text and price.
2. Grid with auto-fill.
3. Make card and body flex columns; body flex: 1.
4. Push price down with margin-top: auto.
5. Stretch the heading link over the card with ::after and inset: 0.

6. Add the hover lift.

Project 907: index.html

```
<!DOCTYPE html>

Project 909 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Horizon Photography - All sessions</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
All sessions	The main heading; only one per page.
	Generic block container for grouping and layout.
<article class="card">	A self-contained piece: card, post, product.
<img src="images/photo-1.jpg" alt="" width="600" height="400">	An image; alt describes it, width and height reserve space before it loads.
Portrait session	Second-level heading for a section.
One hour, 20 edited photos.	A paragraph of text.

Line	What it does
Wedding day	A hyperlink; href gives the destination.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #111827;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 70rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
display: grid;	Turns the element into a grid container.
gap: 1.5rem;	Space between grid or flex items without extra margins.
grid-template-columns: repeat(auto-fill, minmax(15rem, 1fr));	Defines the columns of the grid.

Declaration	What it does
display: flex;	Turns the element into a flex container (one-dimensional layout).
flex-direction: column;	Stacks flex items vertically.
border: 1px solid var(--line);	Changes the visual order of a flex item without changing the source.
border-radius: 14px;	Rounds the corners.
overflow: hidden;	Clips content that sticks out, so images follow rounded corners.
background: #fff;	Background colour or image.
position: relative;	Keeps normal flow but becomes the reference for absolutely positioned children.
transition: box-shadow .2s, translate .2s;	Soft shadow that lifts the element from the page.
.card:hover {	Applies while the pointer is over the element.
translate: 0 -3px;	Moves the element without affecting the layout of others.
width: 100%;	Fills the container width.
height: auto;	Keeps the natural height, preserving image proportions.
aspect-ratio: 3 / 2;	Keeps a fixed width-to-height ratio, reserving space before media loads.
object-fit: cover;	Crops an image to fill its box while keeping its proportions.
flex: 1;	All items share free space equally.
font-size: 1.1rem;	Size of the text.
text-decoration: none;	Removes the underline from links.

Declaration	What it does
h2 a::after {	Generated content inserted after the element's content.
content: "";	The text or empty string for a pseudo-element.
position: absolute;	Removes the element from flow and positions it relative to the nearest positioned ancestor.
inset: 0;	Shorthand for top, right, bottom and left all zero: stretches over the parent.
font-weight: 700;	Thickness of the text.

Check your work

- Only one link per card (screen readers)
- Cards equal height in a row
- Price aligned at bottom
- Hover does not shift layout

Exercises

1. Add a filter bar with radio buttons and :has().
2. Add a 'new' badge.
3. Add a sort dropdown with JavaScript.

Theme data for this project

Field	Value
Business	Horizon Photography
Tagline	Portraits, weddings and product photography
City	Maadi
Owner	Adham Nabil
Brand colour	#111827

Accent colour	#f3f4f6
Offers	Portrait session (1200 EGP); Wedding day (15000 EGP); Product shoot (900 EGP); Family session (1500 EGP)

Project 910: Product grid with clickable cards for Papyrus Stationery

Theme: Papyrus Stationery (Heliopolis) | Level 2 | Files: index.html, styles.css

Brief

List all offers as equal-height cards where the whole card is clickable via a stretched link pseudo-element and the price sticks to the bottom.

Learning goals

- Make a whole card clickable accessibly (one link, stretched)
- Push an element to the bottom with margin-top: auto
- Lift cards on hover

Elements and CSS used

HTML elements	CSS features
article, img, div, h2, a, p	position: relative + ::after inset: 0, flex-direction: column, margin-top: auto, transition, translate

Build guide

1. Write one article per offer with image, heading link, text and price.
2. Grid with auto-fill.
3. Make card and body flex columns; body flex: 1.
4. Push price down with margin-top: auto.
5. Stretch the heading link over the card with ::after and inset: 0.

6. Add the hover lift.

Project 910: index.html

Theme: Cedar Furniture (Damietta) | Level 2 | Files: index.html, styles.css

Brief

List all offers as equal-height cards where the whole card is clickable via a stretched link pseudo-element and the price sticks to the bottom.

Learning goals

- Make a whole card clickable accessibly (one link, stretched)
- Push an element to the bottom with margin-top: auto
- Lift cards on hover

Elements and CSS used

HTML elements	CSS features
article, img, div, h2, a, p	position: relative + ::after inset: 0, flex-direction: column, margin-top: auto, transition, translate

Build guide

1. Write one article per offer with image, heading link, text and price.
2. Grid with auto-fill.
3. Make card and body flex columns; body flex: 1.
4. Push price down with margin-top: auto.
5. Stretch the heading link over the card with ::after and inset: 0.

6. Add the hover lift.

Project 912 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Cedar Furniture - All pieces</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
All pieces	The main heading; only one per page.
	Generic block container for grouping and layout.
<article class="card">	A self-contained piece: card, post, product.
<img src="images/furniture-1.jpg" alt="" width="600" height="400">	An image; alt describes it, width and height reserve space before it loads.
Oak dining table	Second-level heading for a section.
Seats six.	A paragraph of text.
Bookshelf 	A hyperlink; href gives the destination.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #78350f;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 70rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
display: grid;	Turns the element into a grid container.
gap: 1.5rem;	Space between grid or flex items without extra margins.
grid-template-columns: repeat(auto-fill, minmax(15rem, 1fr));	Defines the columns of the grid.
display: flex;	Turns the element into a flex container (one-dimensional layout).
flex-direction: column;	Stacks flex items vertically.

Declaration	What it does
border: 1px solid var(--line);	Changes the visual order of a flex item without changing the source.
border-radius: 14px;	Rounds the corners.
overflow: hidden;	Clips content that sticks out, so images follow rounded corners.
background: #fff;	Background colour or image.
position: relative;	Keeps normal flow but becomes the reference for absolutely positioned children.
transition: box-shadow .2s, translate .2s;	Soft shadow that lifts the element from the page.
.card:hover {	Applies while the pointer is over the element.
translate: 0 -3px;	Moves the element without affecting the layout of others.
width: 100%;	Fills the container width.
height: auto;	Keeps the natural height, preserving image proportions.
aspect-ratio: 3 / 2;	Keeps a fixed width-to-height ratio, reserving space before media loads.
object-fit: cover;	Crops an image to fill its box while keeping its proportions.
flex: 1;	All items share free space equally.
font-size: 1.1rem;	Size of the text.
text-decoration: none;	Removes the underline from links.
h2 a::after {	Generated content inserted after the element's content.
content: "";	The text or empty string for a pseudo-element.

Declaration	What it does
position: absolute;	Removes the element from flow and positions it relative to the nearest positioned ancestor.
inset: 0;	Shorthand for top, right, bottom and left all zero: stretches over the parent.
font-weight: 700;	Thickness of the text.

Check your work

- Only one link per card (screen readers)
- Cards equal height in a row
- Price aligned at bottom
- Hover does not shift layout

Exercises

1. Add a filter bar with radio buttons and :has().
2. Add a 'new' badge.
3. Add a sort dropdown with JavaScript.

height: auto;	Keeps the natural height, preserving image proportions.
aspect-ratio: 3 / 2;	Keeps a fixed width-to-height ratio, reserving space before media loads.
object-fit: cover;	Crops an image to fill its box while keeping its proportions.
flex: 1;	All items share free space equally.
font-size: 1.1rem;	Size of the text.
text-decoration: none;	Removes the underline from links.
h2 a::after {	Generated content inserted after the element's content.
content: "";	The text or empty string for a pseudo-element.

Declaration	What it does
position: absolute;	Removes the element from flow and positions it relative to the nearest positioned ancestor.
inset: 0;	Shorthand for top, right, bottom and left all zero: stretches over the parent.
font-weight: 700;	Thickness of the text.

Check your work

- Only one link per card (screen readers)
- Cards equal height in a row
- Price aligned at bottom
- Hover does not shift layout

Exercises

1. Add a filter bar with radio buttons and :has().
2. Add a 'new' badge.
3. Add a sort dropdown with JavaScript.

Theme data for this project

Field	Value
Business	Sahara Pet Care
Tagline	Grooming, boarding and vet visits
City	New Cairo
Owner	Rana Ibrahim
Brand colour	#c2410c
Accent colour	#fff7ed
Offers	Full grooming (400 EGP); Day boarding (250 EGP); Vaccination (300 EGP); Dog walking (100 EGP)

Project 915: Product grid with clickable cards for Alexandria Sailing School

Theme: Alexandria Sailing School (Alexandria) | Level 2 | Files: index.html, styles.css

Brief

List all offers as equal-height cards where the whole card is clickable via a stretched link pseudo-element and the price sticks to the bottom.

Learning goals

- Make a whole card clickable accessibly (one link, stretched)
- Push an element to the bottom with margin-top: auto
- Lift cards on hover

Elements and CSS used

HTML elements	CSS features
article, img, div, h2, a, p	position: relative + ::after inset: 0, flex-direction: column, margin-top: auto, transition, translate

Build guide

1. Write one article per offer with image, heading link, text and price.
2. Grid with auto-fill.
3. Make card and body flex columns; body flex: 1.
4. Push price down with margin-top: auto.
5. Stretch the heading link over the card with ::after and inset: 0.

6. Add the hover lift.

Project 915: index.html

Project 915 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Alexandria Sailing School - All lessons</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
All lessons	The main heading; only one per page.
	Generic block container for grouping and layout.
<article class="card">	A self-contained piece: card, post, product.
<img src="images/sailing-1.jpg" alt="" width="600" height="400">	An image; alt describes it, width and height reserve space before it loads.
Taster session	Second-level heading for a section.
Two hours on the water.	A paragraph of text.

Line	What it does
Beginner course	A hyperlink; href gives the destination.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #1e40af;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 70rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
display: grid;	Turns the element into a grid container.
gap: 1.5rem;	Space between grid or flex items without extra margins.
grid-template-columns: repeat(auto-fill, minmax(15rem, 1fr));	Defines the columns of the grid.

Declaration	What it does
display: flex;	Turns the element into a flex container (one-dimensional layout).
flex-direction: column;	Stacks flex items vertically.
border: 1px solid var(--line);	Changes the visual order of a flex item without changing the source.
border-radius: 14px;	Rounds the corners.
overflow: hidden;	Clips content that sticks out, so images follow rounded corners.
background: #fff;	Background colour or image.
position: relative;	Keeps normal flow but becomes the reference for absolutely positioned children.
transition: box-shadow .2s, translate .2s;	Soft shadow that lifts the element from the page.
.card:hover {	Applies while the pointer is over the element.
translate: 0 -3px;	Moves the element without affecting the layout of others.
width: 100%;	Fills the container width.
height: auto;	Keeps the natural height, preserving image proportions.
aspect-ratio: 3 / 2;	Keeps a fixed width-to-height ratio, reserving space before media loads.
object-fit: cover;	Crops an image to fill its box while keeping its proportions.
flex: 1;	All items share free space equally.
font-size: 1.1rem;	Size of the text.
text-decoration: none;	Removes the underline from links.

Declaration	What it does
h2 a::after {	Generated content inserted after the element's content.
content: "";	The text or empty string for a pseudo-element.
position: absolute;	Removes the element from flow and positions it relative to the nearest positioned ancestor.
inset: 0;	Shorthand for top, right, bottom and left all zero: stretches over the parent.
font-weight: 700;	Thickness of the text.

Check your work

:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #9a3412;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 70rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
display: grid;	Turns the element into a grid container.
gap: 1.5rem;	Space between grid or flex items without extra margins.
grid-template-columns: repeat(auto-fill, minmax(15rem, 1fr));	Defines the columns of the grid.

Declaration	What it does
display: flex;	Turns the element into a flex container (one-dimensional layout).
flex-direction: column;	Stacks flex items vertically.
border: 1px solid var(--line);	Changes the visual order of a flex item without changing the source.
border-radius: 14px;	Rounds the corners.
overflow: hidden;	Clips content that sticks out, so images follow rounded corners.
background: #fff;	Background colour or image.
position: relative;	Keeps normal flow but becomes the reference for absolutely positioned children.
transition: box-shadow .2s, translate .2s;	Soft shadow that lifts the element from the page.
.card:hover {	Applies while the pointer is over the element.
translate: 0 -3px;	Moves the element without affecting the layout of others.
width: 100%;	Fills the container width.
height: auto;	Keeps the natural height, preserving image proportions.
aspect-ratio: 3 / 2;	Keeps a fixed width-to-height ratio, reserving space before media loads.
object-fit: cover;	Crops an image to fill its box while keeping its proportions.
flex: 1;	All items share free space equally.
font-size: 1.1rem;	Size of the text.
text-decoration: none;	Removes the underline from links.

Declaration	What it does
h2 a::after {	Generated content inserted after the element's content.
content: "";	The text or empty string for a pseudo-element.
position: absolute;	Removes the element from flow and positions it relative to the nearest positioned ancestor.
inset: 0;	Shorthand for top, right, bottom and left all zero: stretches over the parent.
font-weight: 700;	Thickness of the text.

Check your work

- Only one link per card (screen readers)
- Cards equal height in a row
- Price aligned at bottom
- Hover does not shift layout

Exercises

1. Add a filter bar with radio buttons and :has().
2. Add a 'new' badge.
3. Add a sort dropdown with JavaScript.

Theme data for this project

Field	Value
Business	Fayoum Pottery Studio
Tagline	Wheel throwing and glazing classes
City	Tunis Village
Owner	Ahmed Mahmoud
Brand colour	#9a3412

Field	Value
Accent colour	#fff7ed
Offers	Intro to the wheel (450 EGP); Glazing day (300 EGP); Kids clay class (200 EGP); Weekend retreat (2500 EGP)

Project 918: Product grid with clickable cards for Cleopatra Beauty Salon

Theme: Cleopatra Beauty Salon (Dokki) | Level 2 | Files: index.html, styles.css

Brief

List all offers as equal-height cards where the whole card is clickable via a stretched link pseudo-element and the price sticks to the bottom.

Learning goals

- Make a whole card clickable accessibly (one link, stretched)
- Push an element to the bottom with margin-top: auto
- Lift cards on hover

Elements and CSS used

HTML elements	CSS features
article, img, div, h2, a, p	position: relative + ::after inset: 0, flex-direction: column, margin-top: auto, transition, translate

Build guide

1. Write one article per offer with image, heading link, text and price.
2. Grid with auto-fill.
3. Make card and body flex columns; body flex: 1.
4. Push price down with margin-top: auto.
5. Stretch the heading link over the card with ::after and inset: 0.

6. Add the hover lift.

Project 918: index.html

Project 918 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Cleopatra Beauty Salon - All treatments</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
All treatments	The main heading; only one per page.
	Generic block container for grouping and layout.
<article class="card">	A self-contained piece: card, post, product.
<img src="images/salon-1.jpg" alt="" width="600" height="400">	An image; alt describes it, width and height reserve space before it loads.
Haircut and blow-dry	Second-level heading for a section.
Consultation included.	A paragraph of text.

Line	What it does
Manicure	A hyperlink; href gives the destination.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #db2777;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 70rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
display: grid;	Turns the element into a grid container.
gap: 1.5rem;	Space between grid or flex items without extra margins.
grid-template-columns: repeat(auto-fill, minmax(15rem, 1fr));	Defines the columns of the grid.

Declaration	What it does
display: flex;	Turns the element into a flex container (one-dimensional layout).
flex-direction: column;	Stacks flex items vertically.
border: 1px solid var(--line);	Changes the visual order of a flex item without changing the source.
border-radius: 14px;	Rounds the corners.
overflow: hidden;	Clips content that sticks out, so images follow rounded corners.
background: #fff;	Background colour or image.
position: relative;	Keeps normal flow but becomes the reference for absolutely positioned children.
transition: box-shadow .2s, translate .2s;	Soft shadow that lifts the element from the page.
.card:hover {	Applies while the pointer is over the element.
translate: 0 -3px;	Moves the element without affecting the layout of others.
width: 100%;	Fills the container width.
height: auto;	Keeps the natural height, preserving image proportions.
aspect-ratio: 3 / 2;	Keeps a fixed width-to-height ratio, reserving space before media loads.
object-fit: cover;	Crops an image to fill its box while keeping its proportions.
flex: 1;	All items share free space equally.
font-size: 1.1rem;	Size of the text.
text-decoration: none;	Removes the underline from links.

Declaration	What it does
h2 a::after {	Generated content inserted after the element's content.
content: "";	The text or empty string for a pseudo-element.
position: absolute;	Removes the element from flow and positions it relative to the nearest positioned ancestor.
inset: 0;	Shorthand for top, right, bottom and left all zero: stretches over the parent.
font-weight: 700;	Thickness of the text.

Project 920 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Luxor Music Academy - All courses</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
All courses	The main heading; only one per page.
	Generic block container for grouping and layout.
<article class="card">	A self-contained piece: card, post, product.
<img src="images/music-1.jpg" alt="" width="600" height="400">	An image; alt describes it, width and height reserve space before it loads.
Oud for beginners	Second-level heading for a section.
Eight weekly lessons.	A paragraph of text.

Line	What it does
Piano grade 1	A hyperlink; href gives the destination.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #4c1d95;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 70rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
display: grid;	Turns the element into a grid container.
gap: 1.5rem;	Space between grid or flex items without extra margins.
grid-template-columns: repeat(auto-fill, minmax(15rem, 1fr));	Defines the columns of the grid.

Declaration	What it does
display: flex;	Turns the element into a flex container (one-dimensional layout).
flex-direction: column;	Stacks flex items vertically.
border: 1px solid var(--line);	Changes the visual order of a flex item without changing the source.
border-radius: 14px;	Rounds the corners.
overflow: hidden;	Clips content that sticks out, so images follow rounded corners.
background: #fff;	Background colour or image.
position: relative;	Keeps normal flow but becomes the reference for absolutely positioned children.
transition: box-shadow .2s, translate .2s;	Soft shadow that lifts the element from the page.
.card:hover {	Applies while the pointer is over the element.
translate: 0 -3px;	Moves the element without affecting the layout of others.
width: 100%;	Fills the container width.
height: auto;	Keeps the natural height, preserving image proportions.
aspect-ratio: 3 / 2;	Keeps a fixed width-to-height ratio, reserving space before media loads.
object-fit: cover;	Crops an image to fill its box while keeping its proportions.
flex: 1;	All items share free space equally.
font-size: 1.1rem;	Size of the text.
text-decoration: none;	Removes the underline from links.

Declaration	What it does
h2 a::after {	Generated content inserted after the element's content.
content: "";	The text or empty string for a pseudo-element.
position: absolute;	Removes the element from flow and positions it relative to the nearest positioned ancestor.
inset: 0;	Shorthand for top, right, bottom and left all zero: stretches over the parent.
font-weight: 700;	Thickness of the text.

Check your work

- Only one link per card (screen readers)
- Cards equal height in a row
- Price aligned at bottom
- Hover does not shift layout

Exercises

1. Add a filter bar with radio buttons and :has().
2. Add a 'new' badge.
3. Add a sort dropdown with JavaScript.

Theme data for this project

Field	Value
Business	Luxor Music Academy
Tagline	Oud, piano, guitar and voice lessons
City	Luxor
Owner	Salma Ragab
Brand colour	#4c1d95

Field	Value
Accent colour	#f5f3ff
Offers	Oud for beginners (1600 EGP); Piano grade 1 (1800 EGP); Guitar chords (1400 EGP); Voice coaching (1500 EGP)

Project 921: Product grid with clickable cards for Port Said Seafood

Theme: Port Said Seafood (Port Said) | Level 2 | Files: index.html, styles.css

Brief

List all offers as equal-height cards where the whole card is clickable via a stretched link pseudo-element and the price sticks to the bottom.

Learning goals

- Make a whole card clickable accessibly (one link, stretched)
- Push an element to the bottom with margin-top: auto
- Lift cards on hover

Elements and CSS used

HTML elements	CSS features
article, img, div, h2, a, p	position: relative + ::after inset: 0, flex-direction: column, margin-top: auto, transition, translate

Build guide

1. Write one article per offer with image, heading link, text and price.
2. Grid with auto-fill.
3. Make card and body flex columns; body flex: 1.
4. Push price down with margin-top: auto.
5. Stretch the heading link over the card with ::after and inset: 0.

6. Add the hover lift.

Project 921: index.html

Project 923 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Nubian Guest House - All rooms</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
All rooms	The main heading; only one per page.
	Generic block container for grouping and layout.
<article class="card">	A self-contained piece: card, post, product.
<img src="images/guesthouse-1.jpg" alt="" width="600" height="400">	An image; alt describes it, width and height reserve space before it loads.
Garden room	Second-level heading for a section.
Double bed, shared terrace.	A paragraph of text.
Nile view suite	A hyperlink; href gives the destination.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #b45309;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.
max-width: 70rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
display: grid;	Turns the element into a grid container.
gap: 1.5rem;	Space between grid or flex items without extra margins.
grid-template-columns: repeat(auto-fill, minmax(15rem, 1fr));	Defines the columns of the grid.
display: flex;	Turns the element into a flex container (one-dimensional layout).
flex-direction: column;	Stacks flex items vertically.

Declaration	What it does
border: 1px solid var(--line);	Changes the visual order of a flex item without changing the source.
border-radius: 14px;	Rounds the corners.
overflow: hidden;	Clips content that sticks out, so images follow rounded corners.
background: #fff;	Background colour or image.
position: relative;	Keeps normal flow but becomes the reference for absolutely positioned children.
transition: box-shadow .2s, translate .2s;	Soft shadow that lifts the element from the page.
.card:hover {	Applies while the pointer is over the element.
translate: 0 -3px;	Moves the element without affecting the layout of others.
width: 100%;	Fills the container width.
height: auto;	Keeps the natural height, preserving image proportions.
aspect-ratio: 3 / 2;	Keeps a fixed width-to-height ratio, reserving space before media loads.
object-fit: cover;	Crops an image to fill its box while keeping its proportions.
flex: 1;	All items share free space equally.
font-size: 1.1rem;	Size of the text.
text-decoration: none;	Removes the underline from links.
h2 a::after {	Generated content inserted after the element's content.
content: "";	The text or empty string for a pseudo-element.

Declaration	What it does
position: absolute;	Removes the element from flow and positions it relative to the nearest positioned ancestor.
inset: 0;	Shorthand for top, right, bottom and left all zero: stretches over the parent.
font-weight: 700;	Thickness of the text.

Check your work

- Only one link per card (screen readers)
- Cards equal height in a row
- Price aligned at bottom
- Hover does not shift layout

Exercises

1. Add a filter bar with radio buttons and :has().
2. Add a 'new' badge.
3. Add a sort dropdown with JavaScript.

Theme data for this project

Field	Value
Business	Nubian Guest House
Tagline	Colourful rooms on the west bank of the Nile
City	Aswan
Owner	Fatma Hassan
Brand colour	#b45309
Accent colour	#fffbeb
Offers	Garden room (900 EGP); Nile view suite (1800 EGP); Family room (1500 EGP); Rooftop dorm (300 EGP)

Project 924: Product grid with clickable cards for Ismailia Cycling Store

Theme: Ismailia Cycling Store (Ismailia) | Level 2 | Files: index.html, styles.css

Brief

List all offers as equal-height cards where the whole card is clickable via a stretched link pseudo-element and the price sticks to the bottom.

Learning goals

- Make a whole card clickable accessibly (one link, stretched)
- Push an element to the bottom with margin-top: auto
- Lift cards on hover

Elements and CSS used

HTML elements	CSS features
article, img, div, h2, a, p	position: relative + ::after inset: 0, flex-direction: column, margin-top: auto, transition, translate

Build guide

1. Write one article per offer with image, heading link, text and price.
2. Grid with auto-fill.
3. Make card and body flex columns; body flex: 1.
4. Push price down with margin-top: auto.
5. Stretch the heading link over the card with ::after and inset: 0.

6. Add the hover lift.

Project 924: index.html

Offers	HTML weekend (Free); CSS art (Free); Scratch games (Free); Hackathon (Free)

Project type: Light and dark theme switcher

Level 3 | 25 projects, one per theme

Support the system colour scheme automatically and add a manual switch that sets a data attribute on the html element, all driven by custom properties.

Project 926: Light and dark theme switcher for Cairo Book Shop

Theme: Cairo Book Shop (Giza) | Level 3 | Files: index.html, styles.css

Brief

Support the system colour scheme automatically and add a manual switch that sets a data attribute on the html element, all driven by custom properties.

Learning goals

- Use prefers-color-scheme and color-scheme
- Theme with custom properties
- Override with a data attribute set by a few lines of JavaScript

Elements and CSS used

HTML elements	CSS features
fieldset, legend, label, input type=radio, section, script	custom properties, @media (prefers-color-scheme), [data-theme], color-scheme, transition

Build guide

1. Define light variables in :root and dark ones inside a prefers-color-scheme media query.
2. Add [data-theme] overrides.
3. Use the variables for background, colour and cards.
4. Add the radio group.

5. Add the script that copies the chosen value to html's data-theme.
6. Test with your OS in dark mode.

Project 926 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Cairo Book Shop - Themes</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
Cairo Book Shop	The main heading; only one per page.
<p>This page follows your system theme and also lets you choose one...	A paragraph of text.
<fieldset class="theme">	Groups related form controls.
<legend>Theme</legend>	Caption for the fieldset.
<label><input type="radio" name="theme" value="auto" checked> Auto<...	Text label for a control; for matches the control's id, or the label wraps the control.
<label><input type="radio" name="theme" value="light"> Light</label>	Radio button: one choice from a group sharing the same name.

Line	What it does
<label><input type="radio" name="theme" value="dark"> Dark</label>	A form control; its type decides what it looks like.
<section class="card">	A thematic group of content, normally with its own heading.
Learn HTML	Second-level heading for a section.
<p>From your first tag to a complete page. <a href="#">Read more</a...	A hyperlink; href gives the destination.
<script>	JavaScript; here only a few lines to open a dialog or switch a theme.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #b90000;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.

Declaration	What it does
color-scheme: light dark;	Tells the browser which colour schemes the page supports so native controls match.
@media (prefers-color-scheme: dark) { :root { --bg: #111827; --fg: ...	Applies when the user's system is in dark mode.
:root[data-theme="light"] {	Attribute selector on a data attribute set by JavaScript.
background: var(--bg);	Background colour or image.
transition: background .3s, color .3s;	Animates property changes smoothly, for example on hover.
max-width: 40rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
display: flex;	Turns the element into a flex container (one-dimensional layout).
gap: 1rem;	Space between grid or flex items without extra margins.
border: 1px solid var(--line);	Changes the visual order of a flex item without changing the source.
border-radius: 10px;	Rounds the corners.
border-radius: 12px;	The line around the element: width, style and colour.

Check your work

- Follows system setting by default
- Manual choice overrides
- Form controls also switch (color-scheme)
- Contrast good in both themes

Exercises

1. Remember the choice in localStorage.
2. Add a high-contrast theme.
3. Animate the switch with a view transition.

Theme data for this project

Field	Value
Business	Cairo Book Shop
Tagline	PDF and printed books about web development
City	Giza
Owner	Mohamed Khattab
Brand colour	#b90000
Accent colour	#f4f1ea
Offers	Learn HTML (120 EGP); CSS in Practice (150 EGP); JavaScript Basics (180 EGP); Web Accessibility (95 EGP)

Project 927: Light and dark theme switcher for Nile Bakery

Theme: Nile Bakery (Cairo) | Level 3 | Files: index.html, styles.css

Brief

Support the system colour scheme automatically and add a manual switch that sets a data attribute on the html element, all driven by custom properties.

Learning goals

- Use prefers-color-scheme and color-scheme
- Theme with custom properties
- Override with a data attribute set by a few lines of JavaScript

Elements and CSS used

HTML elements	CSS features
fieldset, legend, label, input type=radio, section, script	custom properties, @media (prefers-color-scheme), [data-theme], color-scheme, transition

Build guide

1. Define light variables in :root and dark ones inside a prefers-color-scheme media query.
2. Add [data-theme] overrides.
3. Use the variables for background, colour and cards.
4. Add the radio group.
5. Add the script that copies the chosen value to html's data-theme.

6. Test with your OS in dark mode.

Project 927: index.html

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1">
  <title>Nile Bakery - Themes</title>
  <link rel="stylesheet" href="styles.css">
</head>
<body>
  <main>
    <h1>Nile Bakery</h1>
    <p>This page follows your system theme and also lets you choose
one.</p>
    <fieldset class="theme">
      <legend>Theme</legend>
      <label><input type="radio" name="theme" value="auto" checked>
Auto</label>
      <label><input type="radio" name="theme" value="light"> Light</
label>
      <label><input type="radio" name="theme" value="dark"> Dark</
label>
    </fieldset>
    <section class="card">
      <h2>Sourdough loaf</h2>
      <p>Slow fermented, crisp crust. <a href="#">Read more</a></p>
    </section>
  </main>
  <script>
    document.querySelectorAll('input[name=theme]').forEach(r => r.
addEventListener('change', e => {
      document.documentElement.dataset.theme = e.target.value;
    }));
  </script>
</body>
</html>
```

Project 927: styles.css

```
*, *::before, *::after { box-sizing: border-box; }

--brand: #1d4ed8;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.

Declaration	What it does
color-scheme: light dark;	Tells the browser which colour schemes the page supports so native controls match.
@media (prefers-color-scheme: dark) { :root { --bg: #111827; --fg: ...	Applies when the user's system is in dark mode.
:root[data-theme="light"] {	Attribute selector on a data attribute set by JavaScript.
background: var(--bg);	Background colour or image.
transition: background .3s, color .3s;	Animates property changes smoothly, for example on hover.
max-width: 40rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
display: flex;	Turns the element into a flex container (one-dimensional layout).
gap: 1rem;	Space between grid or flex items without extra margins.
border: 1px solid var(--line);	Changes the visual order of a flex item without changing the source.
border-radius: 10px;	Rounds the corners.
border-radius: 12px;	The line around the element: width, style and colour.

Check your work

- Follows system setting by default
- Manual choice overrides
- Form controls also switch (color-scheme)
- Contrast good in both themes

Exercises

1. Remember the choice in localStorage.
2. Add a high-contrast theme.
3. Animate the switch with a view transition.

Theme data for this project

Field	Value
Business	Delta Dental Clinic
Tagline	Gentle care for the whole family
City	Mansoura
Owner	Dr. Hana Youssef
Brand colour	#1d4ed8
Accent colour	#eff6ff
Offers	Check-up (300 EGP); Whitening (1500 EGP); Filling (600 EGP); Braces consultation (Free)

Project 930: Light and dark theme switcher for Red Sea Travel

Theme: Red Sea Travel (Hurghada) | Level 3 | Files: index.html, styles.css

Brief

Support the system colour scheme automatically and add a manual switch that sets a data attribute on the html element, all driven by custom properties.

Learning goals

- Use prefers-color-scheme and color-scheme
- Theme with custom properties
- Override with a data attribute set by a few lines of JavaScript

Elements and CSS used

HTML elements	CSS features
fieldset, legend, label, input type=radio, section, script	custom properties, @media (prefers-color-scheme), [data-theme], color-scheme, transition

Build guide

1. Define light variables in :root and dark ones inside a prefers-color-scheme media query.
2. Add [data-theme] overrides.
3. Use the variables for background, colour and cards.
4. Add the radio group.

5. Add the script that copies the chosen value to html's data-theme.
6. Test with your OS in dark mode.

Project 930: index.html

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1">
  <title>Red Sea Travel - Themes</title>
  <link rel="stylesheet" href="styles.css">
</head>
<body>
  <main>
    <h1>Red Sea Travel</h1>
    <p>This page follows your system theme and also lets you choose
one.</p>
    <fieldset class="theme">
      <legend>Theme</legend>
      <label><input type="radio" name="theme" value="auto" checked>
Auto</label>
      <label><input type="radio" name="theme" value="light"> Light</
label>
      <label><input type="radio" name="theme" value="dark"> Dark</
label>
    </fieldset>
    <section class="card">
      <h2>Luxor day trip</h2>
      <p>Karnak, Valley of the Kings. <a href="#">Read more</a></p>
    </section>
  </main>
  <script>
    document.querySelectorAll('input[name=theme]').forEach(r => r.
addEventListener('change', e => {
      document.documentElement.dataset.theme = e.target.value;
    }));
  </script>
</body>
</html>
```

Project 930: styles.css

```

Project 930 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Red Sea Travel - Themes</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
Red Sea Travel	The main heading; only one per page.
<p>This page follows your system theme and also lets you choose one...	A paragraph of text.
<fieldset class="theme">	Groups related form controls.
<legend>Theme</legend>	Caption for the fieldset.
<label><input type="radio" name="theme" value="auto" checked> Auto<...	Text label for a control; for matches the control's id, or the label wraps the control.
<label><input type="radio" name="theme" value="light"> Light</label>	Radio button: one choice from a group sharing the same name.

Line	What it does
<label><input type="radio" name="theme" value="dark"> Dark</label>	A form control; its type decides what it looks like.
<section class="card">	A thematic group of content, normally with its own heading.
Luxor day trip	Second-level heading for a section.
Karnak, Valley of the Kings. Read more	A hyperlink; href gives the destination.
<script>	JavaScript; here only a few lines to open a dialog or switch a theme.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #0369a1;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.

Declaration	What it does
color-scheme: light dark;	Tells the browser which colour schemes the page supports so native controls match.
@media (prefers-color-scheme: dark) { :root { --bg: #111827; --fg: ...	Applies when the user's system is in dark mode.
:root[data-theme="light"] {	Attribute selector on a data attribute set by JavaScript.
background: var(--bg);	Background colour or image.
transition: background .3s, color .3s;	Animates property changes smoothly, for example on hover.
max-width: 40rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
display: flex;	Turns the element into a flex container (one-dimensional layout).
gap: 1rem;	Space between grid or flex items without extra margins.
border: 1px solid var(--line);	Changes the visual order of a flex item without changing the source.
border-radius: 10px;	Rounds the corners.
border-radius: 12px;	The line around the element: width, style and colour.

Check your work

- Follows system setting by default
- Manual choice overrides
- Form controls also switch (color-scheme)
- Contrast good in both themes

Exercises

1. Remember the choice in localStorage.
2. Add a high-contrast theme.
3. Animate the switch with a view transition.

Theme data for this project

Project 933 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Sinai Trekking Club - Themes</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
Sinai Trekking Club	The main heading; only one per page.
<p>This page follows your system theme and also lets you choose one...	A paragraph of text.
<fieldset class="theme">	Groups related form controls.
<legend>Theme</legend>	Caption for the fieldset.
<label><input type="radio" name="theme" value="auto" checked> Auto<...	Text label for a control; for matches the control's id, or the label wraps the control.
<label><input type="radio" name="theme" value="light"> Light</label>	Radio button: one choice from a group sharing the same name.

Line	What it does
<label><input type="radio" name="theme" value="dark"> Dark</label>	A form control; its type decides what it looks like.
<section class="card">	A thematic group of content, normally with its own heading.
Mount Sinai sunrise	Second-level heading for a section.
Night climb, 7 km. Read more	A hyperlink; href gives the destination.
<script>	JavaScript; here only a few lines to open a dialog or switch a theme.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #92400e;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.

Declaration	What it does
color-scheme: light dark;	Tells the browser which colour schemes the page supports so native controls match.
@media (prefers-color-scheme: dark) { :root { --bg: #111827; --fg: ...	Applies when the user's system is in dark mode.
:root[data-theme="light"] {	Attribute selector on a data attribute set by JavaScript.
background: var(--bg);	Background colour or image.
transition: background .3s, color .3s;	Animates property changes smoothly, for example on hover.
max-width: 40rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
display: flex;	Turns the element into a flex container (one-dimensional layout).
gap: 1rem;	Space between grid or flex items without extra margins.
border: 1px solid var(--line);	Changes the visual order of a flex item without changing the source.
border-radius: 10px;	Rounds the corners.
border-radius: 12px;	The line around the element: width, style and colour.

Check your work

- Follows system setting by default
- Manual choice overrides
- Form controls also switch (color-scheme)
- Contrast good in both themes

Exercises

1. Remember the choice in localStorage.
2. Add a high-contrast theme.
3. Animate the switch with a view transition.

Theme data for this project

Field	Value
Business	Sinai Trekking Club
Tagline	Guided mountain walks for every level
City	Saint Catherine
Owner	Yara Hamdy
Brand colour	#92400e
Accent colour	#fffbeb
Offers	Mount Sinai sunrise (400 EGP); Blue Desert loop (250 EGP); Wadi Gnai (300 EGP); Three-day traverse (1900 EGP)

Project 934: Light and dark theme switcher for Horizon Photography

Theme: Horizon Photography (Maadi) | Level 3 | Files: index.html, styles.css

Brief

Support the system colour scheme automatically and add a manual switch that sets a data attribute on the html element, all driven by custom properties.

Learning goals

- Use prefers-color-scheme and color-scheme
- Theme with custom properties
- Override with a data attribute set by a few lines of JavaScript

Elements and CSS used

HTML elements	CSS features
fieldset, legend, label, input type=radio, section, script	custom properties, @media (prefers-color-scheme), [data-theme], color-scheme, transition

Build guide

1. Define light variables in :root and dark ones inside a prefers-color-scheme media query.
2. Add [data-theme] overrides.
3. Use the variables for background, colour and cards.
4. Add the radio group.

5. Add the script that copies the chosen value to html's data-theme.
6. Test with your OS in dark mode.

Project 934: index.html

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1">
  <title>Horizon Photography - Themes</title>
  <link rel="stylesheet" href="styles.css">
</head>
<body>
  <main>
    <h1>Horizon Photography</h1>
    <p>This page follows your system theme and also lets you choose
one.</p>
    <fieldset class="theme">
      <legend>Theme</legend>
      <label><input type="radio" name="theme" value="auto" checked>

color: var(--ink);	Text colour.

Declaration	What it does
color-scheme: light dark;	Tells the browser which colour schemes the page supports so native controls match.
@media (prefers-color-scheme: dark) { :root { --bg: #111827; --fg: ...	Applies when the user's system is in dark mode.
:root[data-theme="light"] {	Attribute selector on a data attribute set by JavaScript.
background: var(--bg);	Background colour or image.
transition: background .3s, color .3s;	Animates property changes smoothly, for example on hover.
max-width: 40rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
display: flex;	Turns the element into a flex container (one-dimensional layout).
gap: 1rem;	Space between grid or flex items without extra margins.
border: 1px solid var(--line);	Changes the visual order of a flex item without changing the source.
border-radius: 10px;	Rounds the corners.
border-radius: 12px;	The line around the element: width, style and colour.

Check your work

- Follows system setting by default
- Manual choice overrides
- Form controls also switch (color-scheme)
- Contrast good in both themes

Exercises

1. Remember the choice in localStorage.
2. Add a high-contrast theme.
3. Animate the switch with a view transition.

Theme data for this project

Field	Value
Business	Oasis Plant Nursery
Tagline	Indoor plants and gardening advice
City	Sheikh Zayed
Owner	Hossam Ali
Brand colour	#15803d
Accent colour	#f7fee7
Offers	Monstera (250 EGP); Snake plant (120 EGP); Basil pot (45 EGP); Olive tree (600 EGP)

Project 937: Light and dark theme switcher for Cedar Furniture

Theme: Cedar Furniture (Damietta) | Level 3 | Files: index.html, styles.css

Brief

Support the system colour scheme automatically and add a manual switch that sets a data attribute on the html element, all driven by custom properties.

Learning goals

- Use prefers-color-scheme and color-scheme
- Theme with custom properties
- Override with a data attribute set by a few lines of JavaScript

Elements and CSS used

HTML elements	CSS features
fieldset, legend, label, input type=radio, section, script	custom properties, @media (prefers-color-scheme), [data-theme], color-scheme, transition

Build guide

1. Define light variables in :root and dark ones inside a prefers-color-scheme media query.
2. Add [data-theme] overrides.
3. Use the variables for background, colour and cards.
4. Add the radio group.

5. Add the script that copies the chosen value to html's data-theme.
6. Test with your OS in dark mode.

Project 937: index.html

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1">
  <title>Cedar Furniture - Themes</title>
  <link rel="stylesheet" href="styles.css">
</head>
<body>
  <main>
    <h1>Cedar Furniture</h1>
    <p>This page follows your system theme and also lets you choose
one.</p>
    <fieldset class="theme">
      <legend>Theme</legend>
      <label><input type="radio" name="theme" value="auto" checked>
Auto</label>
      <label><input type="radio" name="theme" value="light"> Light</
label>
      <label><input type="radio" name="theme" value="dark"> Dark</
label>
    </fieldset>
    <section class="card">
      <h2>Oak dining table</h2>
      <p>Seats six. <a href="#">Read more</a></p>
    </section>
  </main>
  <script>
    document.querySelectorAll('input[name=theme]').forEach(r => r.
addEventListener('change', e => {
      document.documentElement.dataset.theme = e.target.value;
    }));
  </script>
</body>
</html>
```

Project 937: styles.css

```

Project 937 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Cedar Furniture - Themes</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
Cedar Furniture	The main heading; only one per page.
<p>This page follows your system theme and also lets you choose one...	A paragraph of text.
<fieldset class="theme">	Groups related form controls.
<legend>Theme</legend>	Caption for the fieldset.
<label><input type="radio" name="theme" value="auto" checked> Auto<...	Text label for a control; for matches the control's id, or the label wraps the control.
<label><input type="radio" name="theme" value="light"> Light</label>	Radio button: one choice from a group sharing the same name.

Line	What it does
<label><input type="radio" name="theme" value="dark"> Dark</label>	A form control; its type decides what it looks like.
<section class="card">	A thematic group of content, normally with its own heading.
Oak dining table	Second-level heading for a section.
Seats six. Read more	A hyperlink; href gives the destination.
<script>	JavaScript; here only a few lines to open a dialog or switch a theme.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #78350f;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.

Declaration	What it does
color-scheme: light dark;	Tells the browser which colour schemes the page supports so native controls match.
@media (prefers-color-scheme: dark) { :root { --bg: #111827; --fg: ...	Applies when the user's system is in dark mode.
:root[data-theme="light"] {	Attribute selector on a data attribute set by JavaScript.
background: var(--bg);	Background colour or image.
transition: background .3s, color .3s;	Animates property changes smoothly, for example on hover.
max-width: 40rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
display: flex;	Turns the element into a flex container (one-dimensional layout).
gap: 1rem;	Space between grid or flex items without extra margins.
border: 1px solid var(--line);	Changes the visual order of a flex item without changing the source.
border-radius: 10px;	Rounds the corners.
border-radius: 12px;	The line around the element: width, style and colour.

Check your work

- Follows system setting by default
- Manual choice overrides
- Form controls also switch (color-scheme)
- Contrast good in both themes

Exercises

1. Remember the choice in localStorage.
2. Add a high-contrast theme.
3. Animate the switch with a view transition.

Theme data for this project

Field	Value
Business	Cedar Furniture
Tagline	Solid wood furniture made to order
City	Damietta
Owner	Tarek Lotfy
Brand colour	#78350f
Accent colour	#fef3c7
Offers	Oak dining table (9500 EGP); Bookshelf (4200 EGP); Bedside table (1500 EGP); Coffee table (2800 EGP)

Project 938: Light and dark theme switcher for Byte Repair

Theme: Byte Repair (Nasr City) | Level 3 | Files: index.html, styles.css

Brief

Support the system colour scheme automatically and add a manual switch that sets a data attribute on the html element, all driven by custom properties.

Learning goals

- Use prefers-color-scheme and color-scheme
- Theme with custom properties
- Override with a data attribute set by a few lines of JavaScript

Elements and CSS used

HTML elements	CSS features
fieldset, legend, label, input type=radio, section, script	custom properties, @media (prefers-color-scheme), [data-theme], color-scheme, transition

Build guide

1. Define light variables in :root and dark ones inside a prefers-color-scheme media query.
2. Add [data-theme] overrides.
3. Use the variables for background, colour and cards.
4. Add the radio group.
5. Add the script that copies the chosen value to html's data-theme.

6. Test with your OS in dark mode.

Project 940 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Alexandria Sailing School - Themes</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
Alexandria Sailing School	The main heading; only one per page.
<p>This page follows your system theme and also lets you choose one...	A paragraph of text.
<fieldset class="theme">	Groups related form controls.
<legend>Theme</legend>	Caption for the fieldset.
<label><input type="radio" name="theme" value="auto" checked> Auto<...	Text label for a control; for matches the control's id, or the label wraps the control.
<label><input type="radio" name="theme" value="light"> Light</label>	Radio button: one choice from a group sharing the same name.

Line	What it does
<label><input type="radio" name="theme" value="dark"> Dark</label>	A form control; its type decides what it looks like.
<section class="card">	A thematic group of content, normally with its own heading.
Taster session	Second-level heading for a section.
Two hours on the water. Read more	A hyperlink; href gives the destination.
<script>	JavaScript; here only a few lines to open a dialog or switch a theme.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #1e40af;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.

Declaration	What it does
color-scheme: light dark;	Tells the browser which colour schemes the page supports so native controls match.
@media (prefers-color-scheme: dark) { :root { --bg: #111827; --fg: ...	Applies when the user's system is in dark mode.
:root[data-theme="light"] {	Attribute selector on a data attribute set by JavaScript.
background: var(--bg);	Background colour or image.
transition: background .3s, color .3s;	Animates property changes smoothly, for example on hover.
max-width: 40rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
display: flex;	Turns the element into a flex container (one-dimensional layout).
gap: 1rem;	Space between grid or flex items without extra margins.
border: 1px solid var(--line);	Changes the visual order of a flex item without changing the source.
border-radius: 10px;	Rounds the corners.
border-radius: 12px;	The line around the element: width, style and colour.

Check your work

- Follows system setting by default
- Manual choice overrides
- Form controls also switch (color-scheme)
- Contrast good in both themes

Exercises

1. Remember the choice in localStorage.
2. Add a high-contrast theme.
3. Animate the switch with a view transition.

Theme data for this project

Field	Value
Business	Alexandria Sailing School
Tagline	Learn to sail on the Mediterranean
City	Alexandria
Owner	Amr Selim
Brand colour	#1e40af
Accent colour	#eff6ff
Offers	Taster session (500 EGP); Beginner course (2200 EGP); Racing clinic (1800 EGP); Private lesson (900 EGP)

Project 941: Light and dark theme switcher for Habiba Handmade Jewellery

Theme: Habiba Handmade Jewellery (Aswan) | Level 3 | Files: index.html, styles.css

Brief

Support the system colour scheme automatically and add a manual switch that sets a data attribute on the html element, all driven by custom properties.

Learning goals

- Use prefers-color-scheme and color-scheme
- Theme with custom properties
- Override with a data attribute set by a few lines of JavaScript

Elements and CSS used

HTML elements	CSS features
fieldset, legend, label, input type=radio, section, script	custom properties, @media (prefers-color-scheme), [data-theme], color-scheme, transition

Build guide

1. Define light variables in :root and dark ones inside a prefers-color-scheme media query.
2. Add [data-theme] overrides.
3. Use the variables for background, colour and cards.
4. Add the radio group.

5. Add the script that copies the chosen value to html's data-theme.
6. Test with your OS in dark mode.

Project 941: index.html

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1">
  <title>Habiba Handmade Jewellery - Themes</title>
  <link rel="stylesheet" href="styles.css">
</head>
<body>
  <main>
    <h1>Habiba Handmade Jewellery</h1>
    <p>This page follows your system theme and also lets you choose
one.</p>
    <fieldset class="theme">
      <legend>Theme</legend>
      <label><input type="radio" name="theme" value="auto" checked>
Auto</label>
      <label><input type="radio" name="theme" value="light"> Light</
label>
      <label><input type="radio" name="theme" value="dark"> Dark</
label>
    </fieldset>
    <section class="card">
      <h2>Lotus pendant</h2>
      <p>Sterling silver. <a href="#">Read more</a></p>
    </section>
  </main>
  <script>
    document.querySelectorAll('input[name=theme]').forEach(r => r.
addEventListener('change', e => {
      document.documentElement.dataset.theme = e.target.value;
    }));
  </script>
</body>
</html>
```

Project 941: styles.css

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #db2777;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.

Declaration	What it does
color-scheme: light dark;	Tells the browser which colour schemes the page supports so native controls match.
@media (prefers-color-scheme: dark) { :root { --bg: #111827; --fg: ...	Applies when the user's system is in dark mode.
:root[data-theme="light"] {	Attribute selector on a data attribute set by JavaScript.
background: var(--bg);	Background colour or image.
transition: background .3s, color .3s;	Animates property changes smoothly, for example on hover.
max-width: 40rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
display: flex;	Turns the element into a flex container (one-dimensional layout).
gap: 1rem;	Space between grid or flex items without extra margins.
border: 1px solid var(--line);	Changes the visual order of a flex item without changing the source.
border-radius: 10px;	Rounds the corners.
border-radius: 12px;	The line around the element: width, style and colour.

Check your work

- Follows system setting by default
- Manual choice overrides
- Form controls also switch (color-scheme)
- Contrast good in both themes

Exercises

1. Remember the choice in localStorage.
2. Add a high-contrast theme.
3. Animate the switch with a view transition.

Theme data for this project

Field	Value
Business	Cleopatra Beauty Salon
Tagline	Hair, nails and skin care
City	Dokki
Owner	Mariam Adel
Brand colour	#db2777
Accent colour	#fdf2f8
Offers	Haircut and blow-dry (350 EGP); Manicure (200 EGP); Facial (600 EGP); Bridal package (4500 EGP)

Project 944: Light and dark theme switcher for Suez Auto Service

Theme: Suez Auto Service (Suez) | Level 3 | Files: index.html, styles.css

Brief

Support the system colour scheme automatically and add a manual switch that sets a data attribute on the html element, all driven by custom properties.

Learning goals

- Use prefers-color-scheme and color-scheme
- Theme with custom properties
- Override with a data attribute set by a few lines of JavaScript

Elements and CSS used

HTML elements	CSS features
fieldset, legend, label, input type=radio, section, script	custom properties, @media (prefers-color-scheme), [data-theme], color-scheme, transition

Build guide

1. Define light variables in :root and dark ones inside a prefers-color-scheme media query.
2. Add [data-theme] overrides.
3. Use the variables for background, colour and cards.
4. Add the radio group.

5. Add the script that copies the chosen value to html's data-theme.
6. Test with your OS in dark mode.

Project 944: index.html

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1">
  <title>Suez Auto Service - Themes</title>
  <link rel="stylesheet" href="styles.css">
</head>
<body>
  <main>
    <h1>Suez Auto Service</h1>
    <p>This page follows your system theme and also lets you choose
one.</p>
    <fieldset class="theme">
      <legend>Theme</legend>
      <label><input type="radio" name="theme" value="auto" checked>
Auto</label>
      <label><input type="radio" name="theme" value="light"> Light</
label>
      <label><input type="radio" name="theme" value="dark"> Dark</
label>
    </fieldset>
    <section class="card">
      <h2>Oil change</h2>
      <p>Filter included. <a href="#">Read more</a></p>
    </section>
  </main>
  <script>
    document.querySelectorAll('input[name=theme]').forEach(r => r.
addEventListener('change', e => {
      document.documentElement.dataset.theme = e.target.value;
    }));
  </script>
</body>
</html>
```

Project 944: styles.css

```
*, *::before, *::after { box-sizing: border-box; }

```

Project 944 explained line by line

The important lines of index.html

Line	What it does
<!DOCTYPE html>	Declares modern HTML so the browser renders in standards mode.
<html lang="en">	Root element; lang tells screen readers and search engines the page language.
<meta charset="utf-8">	Character encoding: makes Arabic, accents and symbols display correctly.
<meta name="viewport" content="width=device-width, initial-scale=1">	Makes the page use the real device width on phones.
<title>Suez Auto Service - Themes</title>	Text shown in the browser tab and search results.
<link rel="stylesheet" href="styles.css">	Loads the external CSS file styles.css.
<main>	The unique content of this page; exactly one per page.
Suez Auto Service	The main heading; only one per page.
<p>This page follows your system theme and also lets you choose one...	A paragraph of text.
<fieldset class="theme">	Groups related form controls.
<legend>Theme</legend>	Caption for the fieldset.
<label><input type="radio" name="theme" value="auto" checked> Auto<...	Text label for a control; for matches the control's id, or the label wraps the control.
<label><input type="radio" name="theme" value="light"> Light</label>	Radio button: one choice from a group sharing the same name.

Line	What it does
<label><input type="radio" name="theme" value="dark"> Dark</label>	A form control; its type decides what it looks like.
<section class="card">	A thematic group of content, normally with its own heading.
Oil change	Second-level heading for a section.
Filter included. Read more	A hyperlink; href gives the destination.
<script>	JavaScript; here only a few lines to open a dialog or switch a theme.

The important declarations of styles.css

Declaration	What it does
*, *::before, *::after {	Generated content inserted before the element's content (decorations, numbers, lines).
box-sizing: border-box;	Width and height include padding and border, which makes sizing predictable.
:root {	Custom properties (variables) defined on the root so every element can use them.
--brand: #374151;	The brand colour variable; change it once and every use follows.
margin: 0;	Space outside the element.
font-family: system-ui, Arial, sans-serif;	The typeface stack: preferred font first, fallbacks after.
line-height: 1.6;	Space between lines; 1.5 to 1.7 is comfortable for body text.
color: var(--ink);	Text colour.

Declaration	What it does
color-scheme: light dark;	Tells the browser which colour schemes the page supports so native controls match.
@media (prefers-color-scheme: dark) { :root { --bg: #111827; --fg: ...	Applies when the user's system is in dark mode.
:root[data-theme="light"] {	Attribute selector on a data attribute set by JavaScript.
background: var(--bg);	Background colour or image.
transition: background .3s, color .3s;	Animates property changes smoothly, for example on hover.
max-width: 40rem;	Limits how wide the element can grow, keeping lines readable.
padding: 0 1rem;	Space inside the element between its border and content.
display: flex;	Turns the element into a flex container (one-dimensional layout).
gap: 1rem;	Space between grid or flex items without extra margins.
border: 1px solid var(--line);	Changes the visual order of a flex item without changing the source.
border-radius: 10px;	Rounds the corners.
border-radius: 12px;	The line around the element: width, style and colour.

Check your work

- Follows system setting by default
- Manual choice overrides
- Form controls also switch (color-scheme)
- Contrast good in both themes

Exercises

1. Remember the choice in localStorage.
2. Add a high-contrast theme.
3. Animate the switch with a view transition.

Theme data for this project

Field	Value
Business	Suez Auto Service
Tagline	Honest car servicing and repairs
City	Suez
